Drawstring Retention Clasp

Abstract

A drawstring retention clasp includes a front housing and a rear cover. The rear cover has a width greater than the diameter of an opening in a guide sleeve of an article of clothing or a bag or similar object to minimize or prevent a drawstring clamped by the drawstring retention clasp from being inadvertently drawn completely into the guide sleeve

BACKGROUND OF THE INVENTION

(1) Field of the Invention

[0006] The disclosure relates to drawstring devices for clothing or bags or similar items and more particularly pertains to a new drawstring retention clasp to minimize or prevent a drawstring from being inadvertently drawn completely into the guide sleeve. It is common for drawstrings to be used on clothing and bags. It is also quite common for these drawstrings to be inadvertently or accidentally drawn completely into the guide sleeve that contains the drawstring, such that the ends of the drawstring are not accessible. As a result, the drawstring cannot be tightened until the drawstring is extracted from the guide sleeve, which can be a challenging and annoying process.

(2) Description of Related Art Including Information Disclosed Under 37 CFR 1.97 and 1.98

[0007] The prior art relates to drawstring devices for clothing or bags or similar items. The prior art, as best understood, does not disclose a drawstring retention clasp, wherein the rear cover has a width greater than the diameter of an opening in a guide sleeve of an article of clothing or a bag or similar object to minimize or prevent a drawstring clamped by the drawstring retention clasp from being inadvertently drawn completely into the guide sleeve.

BRIEF SUMMARY OF THE INVENTION

[0008] An embodiment of the disclosure meets the needs presented above in a drawstring retention clasp generally comprising a front housing and a rear cover. The rear cover is designed to be detachably connected to the front housing. The front housing includes a front surface and a rear surface. The rear cover includes an engagement surface designed to be placed against the rear surface upon connection of the rear cover to the front housing. The front housing includes a guide recess positioned in the rear surface that is open-ended and designed to extend along the length of the rear surface. The guide recess is designed to receive a drawstring of an article of clothing or a bag or similar object. The rear cover is designed to cover the guide recess and clamp a drawstring between the guide recess and the engagement surface. The rear cover has a width that is greater than the diameter of an opening in a guide sleeve of an article of clothing or a bag or similar object to minimize or prevent a drawstring clamped between the guide recess and the engagement surface from being inadvertently drawn completely into the guide sleeve.

[0009] There has thus been outlined, rather broadly, the more important features of the disclosure in order that the detailed description thereof that follows may be better understood, and in order that the present contribution to the art may be better appreciated. There are additional features of the disclosure that will be described hereinafter and which will form the subject matter of the claims appended hereto.

[0010] The objects of the disclosure, along with the various features of novelty which characterize the disclosure, are pointed out with particularity in the claims annexed to and forming a part of this disclosure.

Description

BRIEF DESCRIPTION OF SEVERAL VIEWS OF THE DRAWING(S)

[0011] The disclosure will be better understood and objects other than those set forth above will become apparent when consideration is given to the following detailed description thereof. Such

description makes reference to the annexed drawings wherein:

[0012] FIG. **1** is a disassembled view of a drawstring retention clasp according to an embodiment of the disclosure.

[0013] FIG. **2** is a side view of a portion of an embodiment of the disclosure.

[0014] FIG. **3** is a rear perspective view of a portion of an embodiment of the disclosure.

[0015] FIG. **4** is a side view of a portion of an embodiment of the disclosure.

[0016] FIG. **5** is a cross-sectional view of a portion of an embodiment of the disclosure.

[0017] FIG. **6** is a top view of an embodiment of the disclosure.

[0018] FIG. **7** is a perspective view of an embodiment of the disclosure in use.

[0019] FIG. **8** shows a perspective view of a portion of an embodiment of the disclosure.

DETAILED DESCRIPTION OF THE INVENTION

[0020] With reference now to the drawings, and in particular to FIGS. **1** through **8** thereof, a new drawstring retention clasp embodying the principles and concepts of an embodiment of the disclosure and generally designated by the reference numeral **10** will be described.

[0021] As best illustrated in FIGS. **1** through **8**, the drawstring retention clasp **10** generally comprises a front housing **12** and a rear cover **14**. The rear cover **14** is designed to be detachably connected to the front housing **12**. The front housing **12** includes a front surface **16** and a rear surface **18**. The rear cover **14** includes an engagement surface **22** designed to be placed against the rear surface **18** upon connection of the rear cover **14** to the front housing **12**. The front housing **12** includes a guide recess **20** positioned in the rear surface **18** that is open-ended and designed to extend along the length of the rear surface **18**. The guide recess **20** is designed to receive a drawstring **70** of an article of clothing or a bag or similar object. The rear cover **14** is designed to cover the guide recess **20** and clamp the drawstring **70** between the guide recess **20** and the engagement surface **22**. The rear cover **14** has a width that is greater than the diameter of an opening in a guide sleeve of an article of clothing or a bag or similar object to minimize or prevent the drawstring **70** clamped between the guide recess **20** and the engagement surface **22** from being inadvertently drawn completely into the guide sleeve.

[0022] In accordance with at least one possible embodiment, the front housing **12** includes a locking projection **24** positioned in the guide recess **20**. The rear cover **14** includes a projection recess **26** positioned in the engagement surface **22**. The locking projection **24** and the projection recess **26** are designed and positioned to work together to further lock the drawstring **70** in place between the guide recess **20** and the engagement surface **22**. While the figures show the locking projection **24** in the guide recess **20**, it would be possible to place the locking projection **24** on the engagement surface **22** such that it would project into the guide recess **20**, which could include the projection recess **26** or not.

[0023] In accordance with at least one possible embodiment, the rear cover **14** includes snap-fit arms **28**. The front housing **12** includes snap-fit recesses **30** designed and positioned to engage with the snap-fit arms **28** to detachably connect the rear cover **14** and the front housing **12**. While a snap-fit connection is shown in the figures, it should be understood that other detachable connections could be used.

[0024] In accordance with at least one possible embodiment, the front housing **12** is substantially rectangular. In accordance with at least one possible embodiment, the rear cover **14** is substantially oval-shaped or elliptical such that the ends thereof project substantially beyond the outer edges of the front housing **12**. It should be understood that other shapes and designs for the front housing **12** and rear cover **14** are possible, provided that the width or diameter thereof exceeds the width or diameter of an opening in a guide sleeve for the drawstring **70**.

[0025] In accordance with at least one possible embodiment. The front surface **16** includes a decorative image or design. This provides the user with the added benefit that the drawstring retention clasp **10** also has a decorative function. Alternatively, the front surface **16** includes a transparent plate **32**, as shown in FIG. **8**. The front housing **12** includes a slot **34** positioned behind

the transparent plate **32** designed to receive a sheet bearing an image or design thereon. Such a design would allow the user to customize and/or change the decorative design of the drawstring retention clasp **10** as desired. In accordance with at least one possible embodiment, the rear cover **14** could also include a decorative image or design.

[0026] FIG. 7 shows the drawstring retention clasp **10** in use, wherein two of the drawstring retention clasps **10** are attached to the ends of a drawstring **70** of a hoodie or sweatshirt **72**. As can be seen in FIG. 7, the width or diameter of the rear cover **14** exceeds the width or diameter of the two guide sleeve openings **74**.

[0027] With respect to the above description then, it is to be realized that the optimum dimensional relationships for the parts of an embodiment enabled by the disclosure, to include variations in size, materials, shape, form, function and manner of operation, assembly and use, are deemed readily apparent and obvious to one skilled in the art, and all equivalent relationships to those illustrated in the drawings and described in the specification are intended to be encompassed by an embodiment of the disclosure.

[0028] Therefore, the foregoing is considered as illustrative only of the principles of the disclosure. Further, since numerous modifications and changes will readily occur to those skilled in the art, it is not desired to limit the disclosure to the exact construction and operation shown and described, and accordingly, all suitable modifications and equivalents may be resorted to, falling within the scope of the disclosure. In this patent document, the word “comprising” is used in its non-limiting sense to mean that items following the word are included, but items not specifically mentioned are not excluded. A reference to an element by the indefinite article “a” does not exclude the possibility that more than one of the element is present, unless the context clearly requires that there be only one of the elements.

Claims

1. A drawstring retention clasp comprising: a front housing; a rear cover being configured to be detachably connected to said front housing; said front housing comprising a front surface and a rear surface; said rear cover comprising an engagement surface configured to be placed against said rear surface upon connection of said rear cover to said front housing; said front housing comprising a guide recess disposed in said rear surface being open-ended and configured to extend along the length of said rear surface; said guide recess being configured to receive a drawstring of an article of clothing or a bag or similar object; said rear cover being configured to cover said guide recess and clamp a drawstring between said guide recess and said engagement surface; and said rear cover having a width greater than the diameter of an opening in a guide sleeve of an article of clothing or a bag or similar object to minimize or prevent a drawstring clamped between said guide recess and said engagement surface from being inadvertently drawn completely into the guide sleeve.
2. The drawstring retention clasp of claim 1, wherein: said front housing comprises a locking projection disposed in said guide recess; and said rear cover comprises a projection recess disposed in said engagement surface; and said locking projection and said projection recess are configured and disposed to together further lock a drawstring in place between said guide recess and said engagement surface.
3. The drawstring retention clasp of claim 2, wherein: said rear cover comprises snap-fit arms; and said front housing comprises snap-fit recesses configured and disposed to engage with said snap-fit arms to detachably connect said rear cover and said front housing.
4. The drawstring retention clasp of claim 3, wherein said front housing is substantially rectangular.
5. The drawstring retention clasp of claim 4, wherein said rear cover is substantially oval-shaped or elliptical such that the ends thereof project substantially beyond the outer edges of said front housing.
6. The drawstring retention clasp of claim 5, wherein one of (A) and (B): (A) said front surface

comprises a decorative image or design; and (B) said front surface comprises a transparent plate; and said front housing comprises a slot disposed behind said transparent plate configured to receive a sheet bearing an image or design thereon.

7. The drawstring retention clasp of claim 6, wherein said rear cover comprises a decorative image or design.

8. The drawstring retention clasp of claim 1, wherein: said rear cover comprises snap-fit arms; and said front housing comprises snap-fit recesses configured and disposed to engage with said snap-fit arms to detachably connect said rear cover and said front housing.

9. The drawstring retention clasp of claim 1, wherein said front housing is substantially rectangular.

10. The drawstring retention clasp of claim 1, wherein said rear cover is substantially oval-shaped or elliptical such that the ends thereof project substantially beyond the outer edges of said front housing.

11. The drawstring retention clasp of claim 1, wherein said front surface comprises a decorative image or design.

12. The drawstring retention clasp of claim 1, wherein: said front surface comprises a transparent plate; and said front housing comprises a slot disposed behind said transparent plate configured to receive a sheet bearing an image or design thereon.

13. The drawstring retention clasp of claim 1, wherein said rear cover comprises a decorative image or design.
