United States Plant Patent	PP36911
Kind Code	P2
Date of Patent	September 02, 2025
Inventor(s)	Palmer; Sarah et al.

Strawberry plant named ‘DrisStrawOneHundredSeven’

Abstract

A new and distinct variety of strawberry plant named ‘DrisStrawOneHundredSeven’, particularly selected for its yield potential, fruit quality, and moderate plant habit, is disclosed.

Latin Name: Fragaria x ananassa DrisStrawOneHundredSeven

Inventors: **Palmer; Sarah (East Malling, GB), Stewart; Philip J. (Royal Oaks, CA), Rosolia; Umberto (Maidstone, GB), Lillo; Alessandra (Bologna, IT)**

Applicant: **Driscoll's, Inc.** (Watsonville, CA)

Assignee: **Driscoll's, Inc. (Watsonville, CA)**

Appl. No.: **18/911159**

Filed: **October 09, 2024**

Publication Classification

Int. Cl.: **A01H5/08** (20180101); **A01H6/74** (20180101)

U.S. Cl.:

USPC PLT/208

Field of Classification Search

USPC: PLT/208; PLT/209

Background/Summary

(1) Latin name: Botanical classification: *Fragaria* x *ananassa*.
(2) Varietal denomination: The varietal denomination of the claimed variety of strawberry plant is 'DrisStrawOneHundredSeven'.
BACKGROUND OF THE INVENTION
(3) Cultivated strawberry is a hybrid species of the genus *Fragaria* that is grown worldwide for its fruit. Modern strawberry was first bred in Brittany, France, in the 18.sup.th century by crossing *Fragaria virginiana* with *Fragaria chiloensis*. Strawberry fruit is an aggregate accessory fruit, with the fleshy part of the fruit being derived from the receptacle that holds the ovaries.
(4) Strawberry varieties vary widely in color, size, shape, flavor, season of ripening, degree of fertility, and susceptibility to disease. Certain varieties vary in foliage, and some vary in the relative development of their reproductive organs. Typically, strawberry flowers appear hermaphroditic in structure, but function as either male or female. Generally, commercial production of strawberry plants involves propagation from runners and distribution as either plugs or bare root plants. Cultivation is either perennial or annual plasticulture. During the off season, strawberries can also be produced in greenhouses.
(5) Strawberry fruit is widely appreciated for its characteristic bright red color, aroma, juicy texture, and sweetness. Strawberry fruit is a popular fruit that is generally consumed either fresh or in prepared foods, such as preserves and baked goods.
(6) Strawberry is an important and valuable fruit crop. Accordingly, there is a need for new varieties of strawberry plants. In particular, there is a need for improved varieties of strawberry plant that are stable, high yielding, and agronomically sound.
SUMMARY OF THE INVENTION
(7) In order to meet these needs, the present invention is directed to an improved variety of strawberry plant. In particular, the invention relates to a new and distinct variety of strawberry plant (*Fragaria* x *ananassa*), which has been denominated as 'DrisStrawOneHundredSeven'.
(8) Strawberry plant variety 'DrisStrawOneHundredSeven' was selected in East Malling, Kent, United Kingdom in 2020, and originated from a controlled cross between the female parent proprietary strawberry plant 'GE212.011' (unpatented) and the male parent proprietary strawberry plant 'GE046.003' (unpatented). The original seedling of the new variety was first asexually propagated via stolons in Kent, United Kingdom in July 2020.
(9) 'DrisStrawOneHundredSeven' was subsequently asexually propagated via stolons, and has undergone testing at test plots in East Malling, Kent, United Kingdom for two years (2022 to 2024). The present variety has been found to be stable and reproduce true to type through successive asexual propagations via stolons and tissue culture.
(10) 'DrisStrawOneHundredSeven' was particularly selected for its yield potential, fruit quality, and moderate plant habit.

Description

DESCRIPTION OF THE DRAWINGS
(1) This new strawberry plant is illustrated by the accompanying photographs. The colors shown are as true as can be reasonably obtained by conventional photographic procedures. Unless otherwise indicated, the photographs are of plants that are 11 months old.
(2) FIG. **1** illustrates whole fruit of variety 'DrisStrawOneHundredSeven'.
(3) FIG. **2** illustrates longitudinal sections of fruit of variety 'DrisStrawOneHundredSeven'.
(4) FIG. **3** illustrates the lower surface (top row) and upper surface (bottom row) of flowers of variety 'DrisStrawOneHundredSeven'.
(5) FIG. **4** illustrates the lower surface (top) and upper surface (bottom) of leaves of variety 'DrisStrawOneHundredSeven'.

DETAILED BOTANICAL DESCRIPTION

(6) The following detailed descriptions set forth the distinctive characteristics of 'DrisStrawOneHundredSeven'. The data which define these characteristics is based on observations taken in East Malling, Kent, United Kingdom from 2022 to 2024. This description is in accordance with UPOV terminology. Color designations, color descriptions, and other phenotypical descriptions may deviate from the stated values and descriptions depending upon variation in environmental, seasonal, climatic, and cultural conditions.

'DrisStrawOneHundredSeven' has not been observed under all possible environmental conditions. The botanical description of 'DrisStrawOneHundredSeven' was taken from plants that were eleven months old. The indicated values represent averages calculated from measurements of several plants. Color references are primarily to The R.H.S. Colour Chart of The Royal Horticultural Society of London (R.H.S.) (2015 edition). Descriptive terminology follows the *Plant Identification Terminology, An Illustrated Glossary,* 2.sup.nd edition by James G. Harris and Melinda Woolf Harris, unless where otherwise defined. Classification: *Species*.—*Fragaria* x *ananassa*. *Common name*.—Strawberry. *Denomination*.—'DrisStrawOneHundredSeven'. Parentage: *Female parent*.—Proprietary strawberry plant 'GE212.011' (unpatented). *Male parent*. —Proprietary strawberry plant 'GE046.003' (unpatented). Plant: *Height*.—39.7 cm. *Width*.—39.2 cm. *Height/width ratio*.—1. *Number of crowns per plant*.—3.6. *Growth habit*.—Semi-upright. *Density of foliage*.—Medium. Stolon: *Average number of daughter plants per square foot*.—13. *Diameter* (*at bract*).—3.73 mm. *Overall color*.—RHS 144A (Yellow green). *Anthocyanin coloration*.—Absent. *Density of pubescence*.—Sparse. Fruiting truss: *Length* (*from crown to base of terminal flower or fruit*).—36.3 cm. *Diameter* (*at base of truss*).—5.2 mm. *Number of berries per truss*.—6.1. *Attitude at first picking*.—Semi-erect. *Color* (*at base of truss*).—RHS 146A (Moderate olive green). Leaf: *Number of leaflets*.—Three only. *Color of leaf upper surface*.—RHS 141A (Deep yellowish green). *Color of leaf lower surface*.—RHS 138A (Moderate yellowish green). *Blistering*.—Medium. *Glossiness*.—Absent or weak. *Variegation*.—Absent. *Terminal leaflet*.—Length: 11.1 cm. Width: 9.4 cm. Length/width ratio: 1.2. Number of teeth per terminal leaflet: 21.4. Overall shape: Orbicular. Shape of base: Acute. Shape of apex: Rounded. Margin: Serrate to crenate. Margin profile: Revolute (margins rolled backwards). Shape in cross section: Straight. *Petiole*.—Length: 262 mm. Diameter: 5.1 mm. Overall color: RHS N144A (Strong yellowish green). Pubescence: Sparse. Attitude of hairs: Slightly outwards. Bract frequency (number present on each petiole): 0. *Petiolule*.—Length: 8.7 mm. Diameter: 2.9 mm. Color: RHS 145A (Strong yellow green). *Stipule*.—Length: 31.9 mm. Width: 11.8 mm. Stipule color: RHS N144D (Strong yellow green). Anthocyanin coloration: Medium. Anthocyanin color: RHS 61C (Vivid purplish red). Inflorescence: *Number of flowers per plant*.—31.2. *Position of inflorescence in relation to foliage*.—Same level. *Flowering interval*.—Late April to early September. *Pedicel*.—Attitude of hairs: Slightly outwards. *Flower*.—Flower diameter (petal tip to petal tip on non-flattened flower): 24 mm. Arrangement of petals: Overlapping. Size of calyx in relation to corolla: Larger. Receptacle color: RHS 144B (Strong yellow green). Stamen: Present. Anther color: RHS 14B (Vivid yellow). *Petal*.—Length: 11.2 mm. Width: 11.9 mm. Length/width ratio: 0.9. Number of petals per flower: 5.3. Color of upper surface: RHS 155A (Pale yellow green). Color of lower surface: RHS 155A (Pale yellow green). Overall shape: Orbicular. Shape of apex: Rounded. Margin: Entire. Shape of base: Rounded. *Calyx*.—Diameter (sepal tip to sepal tip, measured on back of flower): 36.4 mm. *Sepal*.—Length: 14.9 mm. Width: 7 mm. Number of sepals per flower: 10.9. Overall shape: Elliptical. Apex: Convex. Margin: Entire. Fruit: *Fruit size*.—Length: 45.3 mm. Width: 43.1 mm. Length/width ratio: 1.1. *Fruit hollow*.—Length: 17.1 mm. Width: 8.4 mm. Length/width ratio: 2. *Shape*.—Conical *Difference in shape of terminal and other fruits*.—None or very slight. *Fruit color*.—RHS 45A (Vivid red). *Evenness of color*.—Even or very slightly uneven. *Glossiness*.—Weak. *Evenness of surface*.—Even or very slightly uneven. *Width of band without achenes*.—Narrow. *Position of achenes*.—Below surface. *Position of calyx attachment*.—Inserted.

Attitude of sepals.—Outwards. *Diameter of calyx in relation to diameter of fruit*.—Same size. *Adherence of calyx*.—Strong. *Firmness*.—Medium firm. *Color of flesh* (*excluding core*).—RHS 44A (Vivid red). *Evenness of flesh color*.—Even. *Distribution of flesh color*.—Marginal and central. *Color of core*.—RHS 44C (Vivid reddish orange). *Sweetness/soluble solids* (*in ° brix*).—8.6. *Individual fruit weight*.—21.8 g/fruit. *Achenes*.—Number of achenes per fruit: 329. Weight: 0.000581 g/achene. Color of upper (sunward) side: RHS N34A (Moderate red). Color of lower (shaded) side: RHS 1A (Brilliant greenish yellow). *Fruiting*.—Harvest interval: Mid-May to the end of September. Type of bearing: Day neutral. Productivity: Up to 1.173 kg of Class I fruit per plant per season from 11-to 16-month-old plants. Resistance to abiotic stress, pests, and diseases: *Heat*.—Moderately resistant. *Powdery mildew* (*Podosphaera macularis*).—Moderately susceptible. *Anthracnose crown rot* (*Colletotrichum acutatum*).—Moderately resistant. *Verticillium wilt* (*Verticillium dahliae*).—Moderately susceptible.

COMPARISON WITH PARENTAL AND REFERENCE VARIETIES

(7) ‘DrisStrawOneHundredSeven’ differs from the female parent proprietary strawberry plant ‘GE212.011’ (unpatented) in that ‘DrisStrawOneHundredSeven’ has higher yield potential and more desirable non-oblate fruit shape compared to ‘GE212.011’.

(8) ‘DrisStrawOneHundredSeven’ differs from the male parent proprietary strawberry plant ‘GE046.003’ (unpatented) in that ‘DrisStrawOneHundredSeven’ has higher yield potential compared to ‘GE046.003’. Additionally, ‘GE046.003’ exhibits the undesirable characteristic of petal retention, which is not present in ‘DrisStrawOneHundredSeven’.

(9) ‘DrisStrawOneHundredSeven’ differs from the reference variety ‘DrisStrawFiftyNine’ (U.S. Plant Pat. No. 31,233) in that ‘DrisStrawOneHundredSeven’ has medium leaf blistering, acute shape of terminal leaflet base, greenish white color of upper side of petals, narrow width of band without achenes on fruit, and day neutral type of bearing, whereas ‘DrisStrawFiftyNine’ has absent or weak leaf blistering, obtuse shape of terminal leaflet base, white color of upper side of petals, absent or very narrow width of band without achenes on fruit, and fully remontant type of bearing.

(10) ‘DrisStrawOneHundredSeven’ differs from the reference variety ‘DrisStrawFiftyEight’ (U.S. Plant Pat. No. 30,851) in that ‘DrisStrawOneHundredSeven’ has absent stolon anthocyanin coloration, absent or weak leaf glossiness, greenish white color of upper side of petals, narrow width of band without achenes on fruit, and day neutral type of bearing, whereas ‘DrisStrawFiftyEight’ has medium stolon anthocyanin coloration, medium leaf glossiness, white color of upper side of petals, absent or very narrow width of band without achenes on fruit, and fully remontant type of bearing.

Claims

1. A new and distinct variety of strawberry plant named ‘DrisStrawOneHundredSeven’ as shown and described herein.
