(57) ABSTRACT

Sacks, P.C.

The present invention provides compounds of formula (Id) that are prodrugs of catecholamine for use in treatment of neurodegenerative diseases and disorders. The present invention also provides pharmaceutical compositions comprising compounds of the invention and methods of treating neurodegenerative or neuropsychiatric diseases and disorders using the compounds of the invention, in particular Parkinson's disease.

CATECHOLAMINE PRODRUGS FOR USE IN THE TREATMENT OF PARKINSON'S DISEASE

CROSS REFERENCE TO RELATED APPLICATIONS

This Application is a National Stage filing under 35 U.S.C. 371 of International PCT Application No. PCT/ EP2020/063916, filed May 19, 2020, which claims priority ¹⁰ to Denmark Application Number PA201900605, filed May 21, 2019. The entire contents of these applications are incorporated herein by reference in their entirety.

FIELD OF THE INVENTION

The present invention provides compounds that are phosphate, phosphonoxymethyl derivatives and ether derivative prodrugs of the dopamine agonist (4aR,10aR)-1-Propyl-1, 2,3,4,4a,5,10,10a-octahydro-benzo[g]quinoline-6,7-diol, and their use in the treatment of Parkinson's disease and/or other conditions for which treatment with a dopamine agonist is therapeutically beneficial such as but not limited to Restless leg syndrome, Huntington's disease and Alzheimer's disease; and also neuropsychiatric diseases and disorders such as but not limited to schizophrenia, attention deficit hyperactivity disorder and drug addiction. The present invention also provides pharmaceutical compositions comprising compounds of the invention.

BACKGROUND OF THE INVENTION

Parkinson's disease (PD) is a common neurodegenerative disorder that becomes increasingly prevalent with age and affects an estimated seven to ten million people worldwide. 35 Parkinson's disease is a multi-faceted disease characterized by both motor and non-motor symptoms. Motor symptoms include resting tremor (shaking), bradykinesia/akinesia (slowness and poverty of movements), muscular rigidity, postural instability and gait dysfunction; whereas non-motor symptoms include neuropsychiatric disorders (e.g. depression, psychotic symptoms, anxiety, apathy, mild-cognitive impairment and dementia) as well as autonomic dysfunctions and sleep disturbances (Poewe et al., Nature Review, (2017) vol 3 article 17013: 1-21).

A key hallmark of Parkinson's disease pathophysiology is the loss of pigmented dopaminergic neurons in the substantia nigra pars compacta that provides dopaminergic innervation to the striatum and other brain areas. Such progressive neurodegeneration leads to the decrease in dopamine 50 striatal levels which ultimately results in a series of changes in the basal ganglia circuitry, ultimately ending up in the occurrence of the four cardinal motor features of Parkinson's disease. The main target of dopamine in the striatum consists of medium spiny GABAergic neurons (MSNs) 55 selectively expressing D1 or D2 receptors pending topographical projections. GABAergic-MSN projecting to the external pallidum, also called striato-pallidal 'indirect pathway' express D2 receptors (MSN-2); whereas GABAergic-MSN projecting to the substantia nigra pars reticulata and 60 internal pallidum, also called striato-nigral 'direct pathway' express D1 receptors (MSN-1). Depletion of dopamine because of neuronal loss results in an imbalanced activity of the two pathways, resulting in a marked reduction of thalamic and cortical output activities and ultimately motor 65 dysfunctions (Gerfen et al, Science (1990) 250: 1429-32; Delong, (1990) Trends in Neuroscience 13: 281-5; Alexan2

der et Crutcher, (1990) Trends in Neuroscience 13: 266-71; and for review Poewe et al., Nature Review (2017) vol. 3 article 17013: 1-21).

The most effective therapeutic strategies available to patients suffering from Parkinson's disease, and aiming at controlling motor symptoms are primarily indirect and direct dopamine agonists. The classic and gold standard treatment regimen includes chronic oral intake of L-3,4-dihydroxy phenylalanine (L-DOPA) which is decarboxylated in the brain to form dopamine. Other approaches consist in the administration of dopamine receptor agonists such as apomorphine which acts both on the D1 and D2 receptors subtypes, or pramipexole, ropinirole and others which are predominantly directed towards D2 receptors subtypes. 15 Optimal motor relief is obtained with use of both L-DOPA and apomorphine due to their activation of both D1 and D2 receptor subtypes and holistic re-equilibrium of the indirectdirect pathways (i.e. while D2 agonists only reverse the indirect pathway dysfunction).

L-DOPA and apomorphine with the structures depicted below are currently the most efficacious PD drugs in clinical use

L-DOPA is a prodrug of dopamine and remains the most efficacious drug in the treatment of motor Parkinson's disease. However, after several years of treatment (i.e. honeymoon period), complications arise due the inherent progression of the disease (i.e. sustained loss of dopaminergic neurons) as well as poor pharmacokinetic (PK) profile of L-DOPA. Those complications include: 1) dyskinesia which are abnormal involuntary movements occurring during the optimal 'on-time effect' of the drug; and 2) off fluctuations, period during which the L-DOPA positive effect wears off and symptoms re-emerge or worsen (Sprenger and Poewe, CNS Drugs (2013), 27: 259-272).

Direct dopamine receptor agonists are able to activate the dopamine auto receptors as well as the postsynaptic dopamine receptors located on the medium spiny neurons MSN-1 and MSN-2. Apomorphine belongs to a class of dopamine agonists with a 1,2-dihydroxybenzene (catechol) moiety. When combined with a phenethylamine motif, catecholamines often possess low or no oral bioavailability as is the case for apomorphine. Apomorphine is used clinically in PD therapy albeit with a non-oral delivery (typically intermittent subcutaneous administration or daytime continuous parenteral infusion via a pump). For apomorphine, animal studies have shown that transdermal delivery or

Compound (I) is a dopamine receptor agonist with mixed D1 and D2 activity. Three prodrug derivatives of compound (I) are known in the art.

4

However, when the delivery of apomorphine from implants was studied in monkeys (Bibbiani et al., Chase Experimental Neurology (2005), 192: 73-78) it was found that in most cases the animals had to be treated with the immunosuppressant dexamethasone to prevent local irritation and other complications following the implantation surgery. Alternative delivery strategies for apomorphine therapy in PD such as inhalation and sublingual formulations have been extensively explored (see e.g. Grosset et al., Acta Neurol Scand. (2013), 128:166-171 and Hauser et al., Movement Disorders (2016), Vol. 32 (9): 1367-1372). However, these efforts are

Liu et al., J. Med. Chem. (2006), 49: 1494-1498 and Liu et al., Bioorganic Med. Chem. (2008), 16: 3438-3444 disclose the enone derivative of formula (Ia) depicted below which was shown to be converted to the active compound (I) in rats.

An alternative to the non-oral formulations of the catecholamines involves the use of a prodrug masking the free catechol hydroxyl groups to enable oral administration. However, a known problem associated with the development of prodrugs for clinical use is the difficulties associated with predicting conversion to the parent compound in humans.

yet not in clinical use for the treatment of PD.

(Ia)

Various ester prodrugs of catecholamines have been 20 reported in the literature such as enterically coated N-propyl-noraporphine (NPA) and the mono pivaloyl ester of apomorphine for duodenal delivery (see eg. WO 02/100377), and the D1-like agonist adrogolide, a diacetyl prodrug of A-86929 (Giardina and Williams; CNS Drug Reviews (2001), Vol. 7 (3): 305-316). Adrogolide undergoes extensive hepatic first-pass metabolism in man after oral dosing and, as a result, has a low oral bioavailability (app. 4%). In PD patients, intravenous (IV) adrogolide has antiparkinson efficacy comparable to that of L-DOPA (Giardina and Williams; CNS Drug Reviews (2001), Vol. 7 (3): 305-316).

WO 2009/026934 and WO 2009/026935 disclose two types of prodrug derivatives of compound (I) including (6aR,10aR)-7-propyl-6,6a,7,8,9,10,10a,11-octahydro-[1,3] dioxolo[4',5':5,6]benzo[1,2-g]quinoline, a methylenedioxy (MDO) derivative with the formula (Ib) below:

In addition to the ester prodrugs of catecholamines, an alternative prodrug approach involves the masking of the two catechol hydroxyl groups as the corresponding methylenedioxy derivative or di-acetalyl derivative. This prodrug principle has been described for example in Campbell et al., Neuropharmacology (1982); 21(10): 953-961 and in U.S. Pat. No. 4,543,256, WO 2009/026934 and WO 2009/026935.

Yet another suggested approach for a catecholamine prodrug is the formation of an enone derivative as suggested in for example WO 2001/078713 and in Liu et al., Bioorganic Med. Chem. (2008), 16: 3438-3444. For further examples of catecholamine prodrugs see for example Sozio et al., Exp. Opin. Drug Disc. (2012); 7(5): 385-406.

The conversion of compound (Ib) to compound (I) in rat and human hepatocytes has been demonstrated in WO 2010/097092. Furthermore, the in vivo pharmacology of the compounds (Ia) and (Ib) as well as the active "parent compound" (I) has been tested in various animal models relevant for Parkinson's Disease (WO 2010/097092). Both compound (I) and compounds (Ia) and (Ib) were found to be effective, indicating that compounds (Ia) and (Ib) are converted in vivo to compound (I). All three compounds were reported to have a duration of action that was longer than observed for L-dopa and apomorphine.

The compound (4aR,10aR)-1-n-Propyl-1,2,3,4,4a,5,10, 10a-octahydro-benzo[g]quinoline-6,7-diol depicted as compound (I) below is disclosed in WO 2009/026934. The trans-isomer was disclosed previously in Liu et al., J. Med. Chem. (2006), 49: 1494-1498 and then in Liu et al., Bioorganic Med. Chem. (2008), 16: 3438-3444 including pharmacological data indicating that the compound has a low oral bioavailability in rats. The racemate was disclosed for the first time in Cannon et al., J. Heterocyclic Chem. (1980); 17: 1633-1636.

The other prodrug of compound (I) disclosed in WO 2009/026934 and WO 2009/026935 is a conventional ester prodrug of the formula (Ic) shown below:

55

Despite the long-standing interest in the field, there is evidently still an unmet need as regards developing efficient, well-tolerated and orally active drugs for the treatment of PD. A prodrug derivative of a mixed D1/D2 agonist giving a stable PK profile which can provide continuous dopaminergic stimulation may fulfil such unmet needs.

Phosphate derivatives as prodrug principle have previously been suggested and explored for various compounds including catechol moieties. EP0167204 discloses that oral absorption of L-DOPA could be improved by phosphorylation of one hydroxy phenol group. This was demonstrated by showing increased renal blood-flow in anesthetized dogs. U.S. Pat. No. 3,132,171 discloses that diphosphate derivatization of L-DOPA provides a water soluble and stable 15 composition which is converted to L-DOPA upon parenteral administration in rats. U.S. Pat. No. 5,073,547 discloses monophosphorylated L-DOPA esters and suggests that these provides high bioavailability by the oral route (based on intraperitoneal dosing) which is suggested to be caused by 20 decreased peripheral decarboxylation of the compounds.

Lately, phosphate and bis-phosphate derivatives of carbidopa and levodopa with the aim of improving the aqueous solubility of these compounds has been disclosed in WO 2016/065019. Plasma concentration profiles of levodopa and carbidopa demonstrate conversion of phosphate derivatives of carbidopa and levodopa after intravenous and subcutaneous administration.

Phosphonooxymethyl derivatization of amines has been suggested as a prodrug principle for amine compounds distinct from catecholamines.

Masking of catechol hydroxy groups of carbidopa derivatives with benzyl or small alkyl for improvement of intestinal absorption has been suggested in WO 2004/052841 but prodrug potential of such compounds was not demonstrated.

SUMMARY OF THE INVENTION

The present invention relates to new compounds for treatment of Parkinson's Disease. More particularly, the invention relates to new prodrug derivatives of the compound (4aR,10aR)-1-n-Propyl-1,2,3,4,4a,5,10,10a-octa-45 hydro-benzo[g]quinoline-6,7-diol (compound (I)). The compounds of the invention have proven particularly useful for oral delivery of compound (I). In a first aspect, the invention provides a compound according to formula (Id)

wherein R1, R2 and R3 are according to a) or b) below:

a) R1 and R2 are each independently selected from H, $_{65}$ C $_{1}$ -C $_{6}$ alkyl, benzyl and substituent (i) below, and R3 is absent,

6

wherein * indicates the attachment point, with the proviso that R1 and R2 cannot both be H; or

b) R1 and R2 are both H and R3 is substituent (ii) below

wherein * indicates the attachment point; and wherein R4 and R5 are each independently selected from H, C₁-C₆ alkyl, phenyl, benzyl, C₃-C₆ cycloalkyl and methyl substituted with C₃-C₆ cycloalkyl;

or a pharmaceutically acceptable salt thereof.

Another aspect of the invention relates to a pharmaceutical composition comprising a compound according formula (Id) or a pharmaceutically acceptable salt thereof, and one or more pharmaceutically acceptable excipients.

Another aspect of the invention relates to a compound according to formula (Id) for use as a medicament.

Another aspect of the invention relates to a compound according to formula (Id) or a pharmaceutically acceptable salt thereof for use in the treatment of a neurodegenerative disease or disorder such as Parkinson's Disease, Huntington's disease, Restless leg syndrome or Alzheimer's disease; or a neuropsychiatric disease or disorder such as schizophrenia, attention deficit hyperactivity disorder or drug addiction.

Another aspect of the invention relates to a method for the
treatment of a neurodegenerative disease or disorder such as
Parkinson's Disease, Huntington's disease, Restless leg syndrome or Alzheimer's disease; or a neuropsychiatric disease
or disorder such as schizophrenia, attention deficit hyperactivity disorder or drug addiction; which method comprises
the administration of a therapeutically effective amount of a
compound of formula (Id) or a pharmaceutically acceptable
salt thereof, to a patient in need thereof.

Another aspect of the invention relates to the use of a compound according to formula (Id) or a pharmaceutically acceptable salt thereof, for the manufacture of a medicament for the treatment of a neurodegenerative disease or disorder such as Parkinson's Disease, Huntington's disease, Restless leg syndrome or Alzheimer's disease; or for the treatment of a neuropsychiatric disease or disorder such as schizophrenia, attention deficit hyperactivity disorder or drug addiction.

Definitions

Attachment Point

In the context of the present invention, it is understood that the carbon atom at the attachment point on substituent (i) is at the anomeric position of (i). Similarly, the carbon atom at the attachment point on substituent (ii) is at the anomeric position of (ii).

Compounds of the Invention

Reference to compounds encompassed by the invention includes the free substance (e.g. a free base or a zwitter ion)

of compounds of the invention, pharmaceutically acceptable salts of compounds of the invention, such as acid addition salts or base addition salts, and polymorphic and amorphic forms of compounds of the invention and of pharmaceutically acceptable salts thereof. Furthermore, the compounds of the invention and pharmaceutically acceptable salts thereof may potentially exist in unsolvated as well as in solvated forms with pharmaceutically acceptable solvents such as water, ethanol and the like. Both solvated and unsolvated forms are encompassed by the present invention. Pharmaceutically Acceptable Salts

Pharmaceutically acceptable salts in the present context is intended to indicate non-toxic, i.e. physiologically acceptable salts.

The term "pharmaceutically acceptable salts" include pharmaceutically acceptable acid addition salts which are salts formed with inorganic and/or organic acids on the nitrogen atom in the parent molecule. Said acids may be selected from for example hydrochloric acid, hydrobromic 20 acid, phosphoric acid, nitrous acid, sulphuric acid, benzoic acid, citric acid, gluconic acid, lactic acid, maleic acid, succinic acid, tartaric acid, acetic acid, propionic acid, oxalic acid, malonic acid, fumaric acid, glutamic acid, pyroglutamic acid, salicylic acid, gentisic acid, saccharin, and sulfonic 25 acids such as methanesulfonic acid, ethanesulfonic acid, toluenesulfonic acid, naphthalene-2-sulphonic acid, 2-hydroxy ethanesulphonic acid and benzenesulfonic acid.

The term pharmaceutically acceptable salts also include pharmaceutically acceptable base addition salts which are salts formed with inorganic and/or organic bases on the acidic groups of compounds of formula (Id). Said bases may be selected from for example zink hydroxide, and alkali metal bases, such as sodium hydroxide, lithium hydroxide, potassium hydroxide, and alkaline earth bases, such as calcium hydroxide and magnesium hydroxide, and organic bases, such as choline, diethylamine, trimethylamine and triethylamine.

Additional examples of useful acids and bases to form 40 pharmaceutically acceptable salts can be found e.g. in Stahl and Wermuth (Eds) "Handbook of Pharmaceutical salts. Properties, selection, and use", Wiley-VCH, 2008. Prodrug

In the present context, the terms "prodrug" or "prodrug 45 derivative" indicates a compound that, after administration to a living subject, such as a mammal, preferably a human; is converted within the body into a pharmacologically active moiety. The conversion preferably takes place within a mammal, such as in a mouse, rat, dog, minipig, rabbit, 50 monkey and/or human. In the present context a "prodrug of the compound (4aR,10aR)-1-n-Propyl-1,2,3,4,4a,5,10,10aoctahydro-benzo[g]quinoline-6,7-diol" or "a prodrug of the compound of formula (I)" or "a prodrug of compound (I)" is understood to be a compound that, after administration, is 55 converted within the body into the compound (4aR,10aR)-1-n-Propyl-1,2,3,4,4a,5,10,10a-octahydro-benzo[g]quinoline-6,7-diol. Said administration may be by any conventional route of administration of pharmaceutical compositions known in the art, preferably by oral adminis- 60

In the present context, the terms "parent compound" and "parent molecule" indicate the pharmacologically active moiety obtained upon conversion of a corresponding prodrug. For example, the "parent compound" of one of the compounds (Ia), (Ib), (Ic) or any of the compounds of the invention is understood to be the compound of formula (I).

8

Substituents

In the present context, a given range may interchangeably be indicated with "-" (dash) or "to", e.g. the term " C_1 - C_6 alkyl" is equivalent to " C_1 to C_6 alkyl".

The term "alkyl" refer to a linear (i.e. unbranched) or branched saturated hydrocarbon having from one up to six carbon atoms, inclusive. Examples of such groups include, but are not limited to, methyl, ethyl, 1-propyl, 2-propyl, 1-butyl, 2-butyl, 2-methyl-2-propyl, 2-methyl-1-butyl and n-hexyl.

The term "cycloalkyl," as used herein, refers to a saturated ring system containing all carbon atoms as ring members and zero double bonds. A cycloalkyl may be a monocyclic cycloalkyl (e.g., cyclopropyl). Representative examples of cycloalkyl include, but are not limited to, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl.

Pharmacokinetic Definitions and Abbreviations

As used herein, a "PK profile" is an abbreviation of "pharmacokinetic profile". Pharmacokinetic profiles and pharmacokinetic parameters described herein are based on the plasma concentration-time data obtained for the compound of formula (I) after oral dosing of a compound of the invention, using non-compartmental modelling. Abbreviated PK parameters are: C_{max} (maximum concentration); t_{max} (time to C_{max}); $t_{1/2}$ (half-life); AUC₀₋₂₄ (area under the curve from time of dosing and until 24 hours after dosing), and "Exposure at 24 h" is the plasma concentration of the compound of formula (I) as measured 24 hours after dosing. Therapeutically Effective Amount

In the present context, the term "therapeutically effective amount" of a compound of the invention means an amount sufficient to alleviate, arrest, partly arrest, remove or delay the clinical manifestations of a given disease and its complications in a therapeutic intervention comprising the administration of said compound. An amount adequate to accomplish this is defined as "therapeutically effective amount". Effective amounts for each purpose will depend e.g. on the severity of the disease or injury as well as the weight and general state of the subject. It will be understood that determining an appropriate dosage may be achieved using routine experimentation, by constructing a matrix of values and testing different points in the matrix, which is all within the ordinary skills of a trained physician.

In the context of the present invention, a "therapeutically effective amount" of a compound of the invention indicates an amount of said compound of the invention that is able to provide an amount of compound (I) that is sufficient to alleviate, arrest, partly arrest, remove or delay the clinical manifestations of a given disease and its complications when said compound of the invention is administered, preferably by the oral route, to a mammal, preferably a human. Treatment and Treating

In the present context, "treatment" or "treating" is intended to indicate the management and care of a patient for the purpose of alleviating, arresting, partly arresting, removing or delaying progress of the clinical manifestation of the disease. The patient to be treated is preferably a mammal, in particular a human being.

Conditions for Treatment

The compounds of the present invention are intended for treatment of neurodegenerative diseases and disorders such as Parkinson's disease and/or other conditions for which treatment with a dopamine agonist is therapeutically beneficial.

Therapeutic indications include a variety of central nervous system disorders characterized by motor and/or non-

motor disturbances and for which part of the underlying pathophysiology is a dysfunction of the striatal-mediated circuitry. Such functional disturbances can be seen in neurodegenerative diseases such as but not limited to Parkinson's disease (PD), Restless leg syndrome, Huntington's disease, and Alzheimer's disease but also neuropsychiatric diseases such as, but not limited to schizophrenia, attention deficit hyperactivity disorder and drug addiction.

In addition to neurodegenerative diseases and disorders, other conditions in which an increase in dopaminergic turnover may be beneficial are in the improvement of mental functions including various aspects of cognition. It may also have a positive effect in depressed patients, and it may also be used in the treatment of obesity as an anorectic agent and in the treatment of drug addiction. It may improve minimal brain dysfunction (MBD), narcolepsy, attention deficit hyperactivity disorder and potentially the negative, the positive as well as the cognitive symptoms of schizophrenia.

Restless leg syndrome (RLS) and periodic limb movement disorder (PLMD) are alternative indications, which are clinically treated with dopamine agonists. In addition, impotence, erectile dysfunction, SSRI induced sexual dysfunction, ovarian hyperstimulation syndrome (OHSS) and certain pituitary tumors (prolactinoma) are also likely to be improved by treatment with dopamine agonists. Dopamine is involved in regulation of the cardiovascular and renal systems, and accordingly, renal failure and hypertension can be considered alternative indications for the compounds of the invention

The invention encompasses use of the compounds of the invention for treatment of the diseases and disorders listed above.

Combinations

In one embodiment of the invention, the compounds of formula (Id) are for use as stand-alone treatment as the sole active compound. In another embodiment of the invention, the compounds of formula (Id) may be used in combination with other agents useful in the treatment of a neurodegenerative disease or disorder such as Parkinson's disease. The 40 terms "combined use", "in combination with" and "a combination of" and the like as used herein in the context of the method of the invention comprising the combined administration of therapeutically effective amounts of a compound of formula (Id), and another compound, which compound is useful in the treatment a neurodegenerative disease or disorder, is intended to mean the administration of a compound of formula (Id) simultaneously or sequentially, in any order, together with said other compound.

The two compounds may be administered simultaneously 50 or with a time gap between the administrations of the two compounds. The two compounds may be administered either as part of the same pharmaceutical formulation or composition, or in separate pharmaceutical formulations or compositions. The two compounds may be administered on 55 the same day or on different days. They may be administered by the same route, such for example by oral administration, subcutaneous injection, by transdermal administration, by depot, by intramuscular injection or intravenous injection; or by different routes wherein one compound is for example 60 administered orally or placed by depot and the other compound is for example injected. The two compounds may be administered by the same dosage regime or interval, such as once or twice daily, weekly, or monthly; or by different dosage regimes for example wherein one is administered once daily and the other is administered twice daily or weekly or monthly.

10

In some instances, the patient to be treated may already be in treatment with one or more other compounds useful in the treatment of a neurodegenerative disease or disorder when treatment with a compound of formula (Id) is initiated. In other instances, the patient may already be in treatment with a compound of formula (Id) when treatment with one or more other compounds useful in the treatment of a neurodegenerative disease or disorder is initiated. In other instances, the treatment with a compound of formula (Id) and treatment with one or more other compounds useful in the treatment of a neurodegenerative disease or disorder is initiated at the same time.

Compounds for Combination Treatment

In the context of the invention, compounds to be used in combination with a compound of formula (Id) may be selected from for example L-DOPA, droxidopa, foliglurax, MAO-B inhibitors such as selegiline or rasagiline, COMT inhibitors such as entacapone or tolcapone, adenosine 2a antagonists such as istradefylline, antiglutamatergic agents such as amantadine or memantine, acetylcholinesterase inhibitors such as rivastigmine, donepezil or galantamine and antipsychotic agents such as quetiapine, clozapine, risperidone, pimavanserin, olanzapine, haloperidol, aripiprazole or brexpiprazole.

In addition to small molecules, compounds for combination could also include emerging biologics approaches in treatments for neurodegenerative diseases or disorders such as for example antibodies targeting alpha-synuclein, Tau or A-beta proteins.

o Administration Routes

The pharmaceutical compositions comprising a compound of formula (Id), either as the sole active compound or in combination with another active compound, may be specifically formulated for administration by any suitable route such as the oral, rectal, nasal, buccal, sublingual, pulmonal, transdermal and parenteral (e.g. subcutaneous, intramuscular, and intravenous) route. In the context of the present invention the oral route is the preferred route of administration.

It will be appreciated that the route will depend on the general condition and age of the subject to be treated, the nature of the condition to be treated and the active ingredient.

Pharmaceutical Formulations and Excipients

In the following, the term, "excipient" or "pharmaceutically acceptable excipient" refers to pharmaceutical excipients including, but not limited to, carriers, fillers, diluents, antiadherents, binders, coatings, colours, disintegrants, flavours, glidants, lubricants, preservatives, sorbents, sweeteners, solvents, vehicles and adjuvants.

The present invention also provides a pharmaceutical composition comprising a compound of formula (Id), such as one of the compounds disclosed in the Experimental Section herein. The present invention also provides a process for making a pharmaceutical composition comprising a compound of formula (Id). The pharmaceutical compositions according to the invention may be formulated with pharmaceutically acceptable excipients in accordance with conventional techniques such as those disclosed in Remington, "The Science and Practice of Pharmacy", 22th edition (2013), Edited by Allen, Loyd V., Jr.

The pharmaceutical composition comprising a compound of the present invention is preferably a pharmaceutical composition for oral administration. Pharmaceutical compositions for oral administration include solid oral dosage forms such as tablets, capsules, powders and granules; and liquid oral dosage forms such as solutions, emulsions,

suspensions and syrups as well as powders and granules to be dissolved or suspended in an appropriate liquid.

Solid oral dosage forms may be presented as discrete units (e.g. tablets or hard or soft capsules), each containing a predetermined amount of the active ingredient, and preferably one or more suitable excipients. Where appropriate, the solid dosage forms may be prepared with coatings such as enteric coatings or they may be formulated so as to provide modified release of the active ingredient such as delayed or extended release according to methods well known in the 10 art. Where appropriate, the solid dosage form may be a dosage form disintegrating in the saliva, such as for example an orodispersible tablet.

Examples of excipients suitable for solid oral formulation include, but are not limited to, microcrystalline cellulose, 15 corn starch, lactose, mannitol, povidone, croscarmellose sodium, sucrose, cyclodextrin, talcum, gelatin, pectin, magnesium stearate, stearic acid and lower alkyl ethers of cellulose. Similarly, the solid formulation may include excipients for delayed or extended release formulations 20 known in the art, such as glyceryl monostearate or hypromellose. If solid material is used for oral administration, the formulation may for example be prepared by mixing the active ingredient with solid excipients and subsequently compressing the mixture in a conventional tablet- 25 ing machine; or the formulation may for example be placed in a hard capsule e.g. in powder, pellet or mini tablet form. The amount of solid excipient will vary widely but will typically range from about 25 mg to about 1 g per dosage

Liquid oral dosage forms may be presented as for example elixirs, syrups, oral drops or a liquid filled capsule. Liquid oral dosage forms may also be presented as powders for a solution or suspension in an aqueous or non-aqueous liquid. Examples of excipients suitable for liquid oral formulation include, but are not limited to, ethanol, propylene glycol, glycerol, polyethylenglycols, poloxamers, sorbitol, poly-sorbate, mono and di-glycerides, cyclodextrins, coconut oil, palm oil, and water. Liquid oral dosage forms may for example be prepared by dissolving or suspending the 40 active ingredient in an aqueous or non-aqueous liquid, or by incorporating the active ingredient into an oil-in-water or water-in-oil liquid emulsion.

Further excipients may be used in solid and liquid oral formulations, such as colourings, flavourings and preserva- 45 tives etc.

Pharmaceutical compositions for parenteral administration include sterile aqueous and nonaqueous solutions, dispersions, suspensions or emulsions for injection or infusion, concentrates for injection or infusion as well as sterile 50 powders to be reconstituted in sterile solutions or dispersions for injection or infusion prior to use. Examples of excipients suitable for parenteral formulation include, but are not limited to water, coconut oil, palm oil and solutions of cyclodextrins. Aqueous formulations should be suitably 55 buffered if necessary and rendered isotonic with sufficient saline or glucose.

Other types of pharmaceutical compositions include suppositories, inhalants, creams, gels, dermal patches, implants and formulations for buccal or sublingual administration.

It is requisite that the excipients used for any pharmaceutical formulation comply with the intended route of administration and are compatible with the active ingredients.

In one embodiment, the compound of the present invention is administered in an amount from about 0.0001 mg/kg body weight to about 5 mg/kg body weight per day. In

12

particular, daily dosages may be in the range of 0.001 mg/kg body weight to about 2 mg/kg body weight per day. The exact dosages will depend upon the frequency and mode of administration, the sex, the age, the weight, and the general condition of the subject to be treated, the nature and the severity of the condition to be treated, any concomitant diseases to be treated, the desired effect of the treatment and other factors known to those skilled in the art.

A typical oral dosage for adults will be in the range of 0.01-100 mg/day of a compound of the present invention, such as 0.05-50 mg/day, such as 0.1-10 mg/day or 0.1-5 mg/day. Conveniently, the compounds of the invention are administered in a unit dosage form containing said compounds in an amount of about 0.01 to 50 mg, such as 0.05 mg, 0.1 mg, 0.2 mg, 0.5 mg, 1 mg, 5 mg, 10 mg, 15 mg, 20 mg or up to 50 mg of a compound of the present invention.

BRIEF DESCRIPTION OF FIGURES

FIG. 1: graphic illustration of conversion of compounds to the invention to compound (Id).

Solid arrows: conversion demonstrated in vitro and in vivo. Dotted arrow: conversion demonstrated in vitro.

FIG. 2: PK profiles in Wistar rats obtained after oral dosing according to Example 3. Profiles are based on mean plasma concentrations from 3 subjects for each compound.

X-axis: time (hours); Y-axis: plasma concentration of Compound (I) (pg/mL) obtained after dosing of the following compounds: ■: compound (Ia); ♦: compound (Ib); +: compound (9); •: compound (8); X: compound (3) and •: compound (2).

DETAILED DESCRIPTION OF THE INVENTION

The inventors have identified new compounds that are prodrugs of (4aR,10aR)-1-Propyl-1,2,3,4,4a,5,10,10a-octahydro-benzo[g]quinoline-6,7-diol [compound (I)] which is a dual D1/D2 agonist (see for example WO 2009/026934).

The compounds of the invention are phosphate and phosphonoxymethyl derivatives and ether derivatives of compound (I).

It was found that oral dosing of representative compounds of the invention in Wistar rats provides a systemic exposure of compound (I) in plasma, suggesting the usefulness of said compounds as orally active prodrugs of compound (I).

For all the compounds, the doses were corrected by molecular weight to equal a dose of $300 \,\mu\text{g/kg}$ of compound (Ib) corresponding to $287 \,\mu\text{g/kg}$ of compound (I).

It has been observed that oral dosing of compounds (Ia) and (Ib) to Wistar rats results in early and high peak plasma concentrations of compound (I). Such high peak concentrations are in humans likely to be associated with dopaminergic side effects such as for example nausea, vomiting and light headedness. In contrast, for the compounds of the invention a slower absorption rate was observed accompanied by a sustained exposure of compound (I) avoiding rapid peak concentrations. Additionally, the plasma exposure of compound (I) in Wistar rats is maintained throughout 24 hours although the obtained AUC of compound (I) is generally lower than the AUC obtained after dosing of compounds (Ia) and (Ib). However, since the peak concentrations of compound (I) which are expected to drive the side effects are lower, higher doses might be administered of the compounds of the invention to potentially achieve higher overall plasma concentrations of compound (I) compared to what is achievable from dosing compounds (Ia) and (Ib). When

investigating PK properties of compound (Ic), the inventors found that the plasma concentrations of compound (I) were extremely low, leaving compound (Ic) unsuitable as a prodrug of compound (I) for oral administration and confirming that the oral bioavailability of the compounds of the invention is highly unpredictable. PK parameters for the PK studies in Wistar rats are listed in Table 4 and PK profiles are depicted in FIG. 2. All the compounds evaluated in vivo showed conversion to compound (I).

The phosphate and phosphoonoxymethyl derivatives are preferred embodiments of the invention.

Bioconversion of the compounds of the invention to the compound of formula (Id) has also been assessed by incubation in human plasma and/or human hepatocytes as described in Example 1. For the parent compound (I) itself a short half-life in the plasma assay was observed, which likely explains why appearance of compound (I) was in some instances difficult to detect or only detected in very small amounts as compound (I) may have been metabolised at the same time as it was formed. For compound (6) no appearance of compound (I) was observed, but since compound (8) was formed it can be expected that compound (6) is converted to compound (I) through compound (8).

For compounds of the invention, conversion was evaluated either in vitro or both in vivo and in vitro c.f. Table 1 below and in FIG. 1.

TABLE 1

| | 1710. | LL I | | |
|------------------------------|----------------------------------|---------------------------------------|---|--|
| in vitro and | in vivo conversion | of compounds of the | ne invention | |
| | Incubation in human plasma | Incubation in human hepatocytes | In vivo PK study after oral dosing (rats) | |
| | | Observed metabolit | e | |
| Compound (9) | Compound (1) | nt* | Compound (1) | |
| Compound (8) | Compound (1) | nt* | Compound (1) | |
| Compound (6) | Compound (8) | nt* | nt* | |
| Compound (2) Compound (3) | Compound (1) nd | Compound (1) Compound (1) | Compound (1) Compound (1) | |

*nt: not tested;

Thus, in conclusion, the compounds of the invention are useful as orally active prodrugs of compound (I) and has been observed in rats to provide a PK profile avoiding the peak C_{max} observed for the known prodrugs (Ia) and (Ib) and providing a significantly higher AUC of compound (I) than compound (Ic).

Finally, an important issue associated with the compound (Ib) is that this compound is an agonist of the 5-HT2B receptor. Since 5-HT2B receptor agonists have been linked to pathogenesis of valvular heart disease (VHD) after long term exposure, such compounds are not suitable for use in 55 the treatment of chronical diseases (Rothman et al., Circulation (2000), 102: 2836-2841; and Cavero and Guillon, J. Pharmacol. Toxicol. Methods (2014), 69: 150-161). Thus, a further advantage of the compounds of the invention is that these are not 5-HT2B agonists c.f. example 2 and Table 3.

The compounds of the invention are useful in the treatment of neurodegenerative diseases and disorders such as Parkinson's disease and/or other conditions for which treatment with a dopamine agonist is therapeutically beneficial. The compounds, being suitable for oral administration have the potential of providing a new treatment paradigm in Parkinson's Disease.

In one embodiment of the invention, the compounds are for use as stand-alone treatment of a neurodegenerative disease or disorder. In another embodiment of the invention, the compounds are to be used in combination with other agents for treatment of PD such as a compound selected from the group consisting of L-DOPA, droxidopa, foliglurax, a MAO-B inhibitor such as selegiline or rasagiline, a COMT inhibitor such as entacapone or tolcapone, an adenosine 2a antagonist such as istradefylline, an antiglutamatergic agent such as amantadine or memantine, an acetylcholinesterase inhibitor such as rivastigmine, donepezil or galantamine, an antipsychotic agent such as quetiapine, clozapine, risperidone, pimavanserin, olanzapine, haloperidol, aripiprazole or brexpiprazole; or in combination with an antibody targeting alpha-synuclein, Tau or A-beta protein.

Embodiments of the Invention

In the following, embodiments of the invention are disclosed. The first embodiment is denoted E1, the second embodiment is denoted E2 and so forth

E1. A compound according to formula (Id)

$$\begin{array}{c} R3 \\ N \\ R2 \end{array}$$

wherein R1, R2 and R3 are according to a) or b) below: a) R1 and R2 are each independently selected from H, C_1 - C_6 alkyl, benzyl and substituent (i) below, and R3 is absent.

and wherein * indicates the attachment point, with the proviso that R1 and R2 cannot both be H; or

b) R1 and R2 are both H and R3 is substituent (ii) below, N is positively charged,

and wherein * indicates the attachment points; and wherein

R4 and R5 are each independently selected from H, C_1 - C_6 alkyl, phenyl, benzyl, C_3 - C_6 cycloalkyl and methyl substituted with C_3 - C_6 cycloalkyl; or a pharmaceutically acceptable salt thereof.

(Ie) 5

20

(i)

15

E2. A compound according to embodiment E1, wherein the compound is a compound of formula (Ie),

wherein

R1 and R2 are each independently selected from H, C₁-C₆ alkyl, benzyl and substituent (i);

with the proviso that R1 and R2 cannot both be H;

wherein * indicates the attachment point; and wherein R4 and R5 are each independently selected from H, C_1 - C_6 alkyl, phenyl, benzyl, C_3 - C_6 cycloalkyl and methyl substituted with C_3 - C_6 cycloalkyl;

or a pharmaceutically acceptable salt thereof.

E3. The compound or pharmaceutically acceptable salt thereof according to embodiments E1-E2, wherein

R1 is substituent (i).

E4. The compound or pharmaceutically acceptable salt thereof according to embodiments E1-E3, wherein

R1 is substituent (i); and

R2 is selected from H, C₁-C₆ alkyl, benzyl and substituent (i).

E5. The compound or pharmaceutically acceptable salt thereof according to embodiments E1-E4, wherein

R1 is selected from H, C_1 - C_6 alkyl, benzyl and substituent (i); and

R2 is substituent (i).

E6. The compound or pharmaceutically acceptable salt thereof according to embodiment E1, wherein

R1 is H and R2 is substituent (i) and R3 is absent.

E7. The compound or pharmaceutically acceptable salt thereof according to embodiment E1, wherein

R1 is substituent (i) and R2 is H and R3 is absent.

E8. The compound or pharmaceutically acceptable salt thereof according to embodiment E1, wherein

R1 and R2 are both represented by substituent (i), and R3 is absent.

E9. The compound or pharmaceutically acceptable salt thereof according to embodiment E1, wherein

R1 and R2 are both H; and

R3 is substituent (ii).

E10. The compound or pharmaceutically acceptable salt 60 thereof according to any of embodiments E1 and E5, wherein

R1 is benzyl.

E11. The compound or pharmaceutically acceptable salt thereof according to embodiment E1, wherein

R1 is benzyl and R2 is selected from H, C₁-C₆ alkyl, benzyl and substituent (i).

16

E12. The compound or pharmaceutically acceptable salt thereof according to embodiment E1, wherein

R1 is benzyl; and R2 is selected from H, C₁-C₆ alkyl, benzyl and substituent (i); and R3 is absent.

E13. The compound or pharmaceutically acceptable salt thereof according to embodiment E1, wherein

R1 is benzyl; and R2 is selected from H, C₁-C₆ alkyl, benzyl and substituent (i); and R3 is absent.

E14. The compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E13, wherein R4 and R5 are independently selected from H, $\rm C_1\text{-}C_6$ alkyl, phenyl and benzyl.

E15. The compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E14, wherein R4 and R5 are independently selected from H and benzyl. E16. The compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E15, wherein R4 and R5 are selected from H, C₁-C₆ alkyl, phenyl and benzyl;

and at least one of R4 and R5 is H.

E17. The compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E16, wherein R4 and R5 are both H.

E18. The compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E16, wherein at least one of R4 and R5 is benzyl.

E19. The compound according to embodiment E1, wherein the compound is selected from the group consisting of:

Compound 1): (4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1, 2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline;

Compound (2): (4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3, 4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol;

Compound (3): (4aR,10aR)-7-methoxy-1-propyl-1,2,3,4,4a, 5,10,10a-octahydrobenzo[g]quinolin-6-ol;

Compound (4): Benzyl ((4aR,10aR)-6-((bis(benzyloxy) phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-7-yl) hydrogen phosphate;

Compound (5): benzyl ((4aR,10aR)-7-((bis(benzyloxy) phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahyd-robenzo[g]quinolin-6-yl) hydrogen phosphate;

Compound (6): (4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diyl bis(dihydrogen phosphate);

Compound (7): benzyl ((4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl) hydrogen phosphate;

50 Compound (8): (4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4,4a, 5,10,10a-octahydrobenzo[g]quinolin-6-yl dihydrogen phosphate; and

Compound (9): ((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1, 2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydrogen phosphate;

or a pharmaceutically acceptable salt of any of these compounds.

E20. The compound according to embodiment E1, wherein the compound is selected from the group consisting

Compound (2): (4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3, 4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol;

Compound (3): (4aR,10aR)-7-methoxy-1-propyl-1,2,3,4,4a, 5,10,10a-octahydrobenzo[g]quinolin-6-ol;

65 Compound (6): (4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diyl bis(dihydrogen phosphate);

50

55

60

17

Compound (8): (4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4,4a, 5,10,10a-octahydrobenzo[g]quinolin-6-yl dihydrogen phosphate; and

Compound (9): ((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1, 2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydrogen phosphate;

or a pharmaceutically acceptable salt of any of these compounds.

E21. The compound according to embodiment E1, wherein the compound is selected from the group consisting $_{10}$ of:

Compound (6): (4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diyl bis(dihydrogen phosphate);

Compound (8): (4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4,4a, 5,10,10a-octahydrobenzo[g]quinolin-6-yl dihydrogen phosphate; and

Compound (9): ((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1, 2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydrogen phosphate;

or a pharmaceutically acceptable salt of any of these compounds.

E22. The compound according to embodiment E1, wherein the compound is selected from the group consisting of:

Compound (6): (4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diyl bis(dihydrogen phosphate); and

Compound (8): (4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4,4a, 5,10,10a-octahydrobenzo[g]quinolin-6-yl dihydrogen 30 phosphate:

or a sodium salt of any of these compounds.

E23. The compound according to embodiment E1, wherein the compound is selected from the group consisting of:

Compound (2): (4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3, 4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol;

Compound (3): (4aR,10aR)-7-methoxy-1-propyl-1,2,3,4,4a, 5,10,10a-octahydrobenzo[g]quinolin-6-ol;

or a pharmaceutically acceptable salt of any of these $_{\rm 40}$ compounds.

E24. A compound having the formula below

or a pharmaceutically acceptable salt thereof. E25. A compound having the formula below

or a pharmaceutically acceptable salt thereof.

18

E26. A compound having the formula below

or a pharmaceutically acceptable salt thereof. E27. A compound having the formula below

or a pharmaceutically acceptable salt thereof. E28. A compound having the formula below

or a pharmaceutically acceptable salt thereof. E29. A compound having the formula below

or a pharmaceutically acceptable salt thereof.

65 E30. The compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29, for use in therapy.

E31. A compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29, for use as

E32. The compound or pharmaceutically acceptable salt for use as a medicament according to embodiment E31, 5 wherein said medicament is an oral medicament such as a tablet or a capsule for oral administration.

E33. A pharmaceutical composition comprising a therapeutically effective amount of the compound or pharmaceutically acceptable salt thereof according to any of embodi- 10 ments E1-E29, and one or more pharmaceutically acceptable carriers or diluents.

E34. The pharmaceutical composition according to embodiment E33, wherein said pharmaceutical composition is for oral administration.

E35. The pharmaceutical composition according to any of embodiments E33-E34, wherein said pharmaceutical composition is an oral pharmaceutical composition.

E36. The pharmaceutical composition according to any of embodiments E33-E35, wherein said pharmaceutical com- 20 position is a solid oral dosage form.

E37. The pharmaceutical composition according to any of embodiments E33-E36, wherein said pharmaceutical composition is a tablet or a capsule for oral administration.

E38. The pharmaceutical composition according to any of 25 embodiments E33-E37, wherein said pharmaceutical composition further comprises another agent which is useful in the treatment of a neurodegenerative disease or disorder such as Parkinson's disease.

E39. The pharmaceutical composition according to any of 30 embodiments E33-E38, wherein said pharmaceutical composition further comprises a compound selected from the group consisting of L-DOPA, a MAO-B inhibitor such as selegiline or rasagiline, a COMT inhibitor such as entacapone or tolcapone, an adenosine 2a antagonist such as 35 E47, wherein said compound or pharmaceutically acceptistradefylline, an antiglutamatergic agent such as amantadine or memantine, an acetylcholinesterase inhibitor such as rivastigmine, donepezil or galantamine, an antipsychotic agent such as quetiapine, clozapine, risperidone, pimavanserin, olanzapine, haloperidol, aripiprazole or brexpiprazole; 40 or an antibody targeting alpha-synuclein, Tau or A-beta protein.

E40. A compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29, for use in the treatment of a neurodegenerative disease or disorder 45 such as Parkinson's Disease, Huntington's disease, Restless leg syndrome or Alzheimer's disease; or a neuropsychiatric disease or disorder such as schizophrenia, attention deficit hyperactivity disorder or drug addiction.

E41. The compound or pharmaceutically acceptable salt 50 thereof according to any of embodiments E1-E29, for use in the treatment according to embodiment E40, wherein said neurodegenerative disease or disorder is Parkinson's Dis-

thereof according to any of embodiments E1-E29, for use in the treatment according to any of embodiments E40-E41, wherein said compound is to be used in combination with another agent which is useful in the treatment of a neurodegenerative disease or disorder such as Parkinson's dis- 60

E43. The compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29, for use in the treatment according to any of embodiments E40-E42, wherein said compound is to be used in combination with a 65 compound selected from the group consisting of L-DOPA, droxidopa, foliglurax, a MAO-B inhibitor such as selegiline

20

or rasagiline, a COMT inhibitor such as entacapone or tolcapone, an adenosine 2a antagonist such as istradefylline, an antiglutamatergic agent such as amantadine or memantine, an acetylcholinesterase inhibitor such as rivastigmine, donepezil or galantamine, an antipsychotic agent such as quetiapine, clozapine, risperidone, pimavanserin, olanzapine, haloperidol, aripiprazole or brexpiprazole; or in combination with an antibody targeting alpha-synuclein, Tau or A-beta protein.

E44. The compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29, for use in the treatment according to any of embodiments E40-E43, wherein said treatment is performed by oral administration of said compound.

E45. The compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29, for use in the treatment according to any of embodiments E40-E44, wherein said compound is comprised in an oral pharmaceutical composition such as a tablet or a capsule for oral administration.

E46. A method for the treatment of a neurodegenerative disease or disorder such as Parkinson's Disease, Huntington's disease, Restless leg syndrome or Alzheimer's disease; or a neuropsychiatric disease or disorder such as schizophrenia, attention deficit hyperactivity disorder or drug addiction; which method comprises the administration of a therapeutically effective amount of a compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29, to a patient in need thereof.

E47. The method according to embodiment E46, wherein said neurodegenerative disease or disorder is Parkinson's Disease.

E48. The method according to any of embodiments E46able salt thereof according to any of embodiments E1-E29, is used in combination with another agent which is useful in the treatment of a neurodegenerative disease or disorder such as Parkinson's disease.

E49. The method according to any of embodiments E46-E48, wherein said compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29, is used in combination with a compound selected from the group consisting of L-DOPA, droxidopa, foliglurax, a MAO-B inhibitor such as selegiline or rasagiline, a COMT inhibitor such as entacapone or tolcapone, an adenosine 2a antagonist such as istradefylline, an antiglutamatergic agent such as amantadine or memantine, an acetylcholinesterase inhibitor such as rivastigmine, donepezil or galantamine, an antipsychotic agent such as quetiapine, clozapine, risperidone, pimavanserin, olanzapine, haloperidol, aripiprazole or brexpiprazole; or in combination with an antibody targeting alpha-synuclein, Tau or A-beta protein.

E50. The method according to any of embodiments E46-E42. The compound or pharmaceutically acceptable salt 55 E49, wherein said administration is performed by the oral

> E51. The method according to any of embodiments E46-E50, wherein said compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29 is comprised in an oral pharmaceutical composition such as a tablet or a capsule for oral administration.

> E52. Use of a compound or pharmaceutically acceptable salt thereof according to any of embodiments E1-E29, in the manufacture of a medicament for the treatment of a neurodegenerative disease or disorder such as Parkinson's Disease, Huntington's disease, Restless leg syndrome or Alzheimer's disease; or for the treatment of a neuropsychi

atric disease or disorder such as schizophrenia, attention deficit hyperactivity disorder or drug addiction.

E53. The use according to embodiment E52, wherein said neurodegenerative disease or disorder is Parkinson's Disease.

E54. The use according to any of embodiments E52-E53, wherein said medicament is used in combination with another agent which is useful in the treatment of a neuro-degenerative disease or disorder such as Parkinson's disease

E55. The use according to any of embodiments E52-E54, wherein said medicament is used in combination with a compound selected from the group consisting of L-DOPA, droxidopa, foliglurax, a MAO-B inhibitor such as selegiline or rasagiline, a COMT inhibitor such as entacapone or tolcapone, an adenosine 2a antagonist such as istradefylline, an antiglutamatergic agent such as amantadine or memantine, an acetylcholinesterase inhibitor such as rivastigmine, donepezil or galantamine, an antipsychotic agent such as quetiapine, clozapine, risperidone, pimavanserin, olanzapine, haloperidol, aripiprazole or brexpiprazole; or in combination with an antibody targeting alpha-synuclein, Tau or A-beta protein.

E56. The use according to any of embodiments E52-E55, wherein said medicament is an oral medicament such as a tablet or a capsule for oral administration.

In the context of the present invention, it is understood that the carbon atom at the attachment point on substituent (ii) (depicted in embodiment E1) is at the anomeric position of (ii).

All references, including publications, patent applications and patents, cited herein are hereby incorporated by reference in their entirety and to the same extent as if each

reference were individually and specifically indicated to be incorporated by reference and were set forth in its entirety (to the maximum extent permitted by law).

Headings and sub-headings are used herein for convenience only and should not be construed as limiting the invention in any way.

The description herein of any aspect or aspect of the invention using terms such as "comprising", "having," "including" or "containing" with reference to an element or elements is intended to provide support for a similar aspect or aspect of the invention that "consists of", "consists essentially of" or "substantially comprises" that particular element or elements, unless otherwise stated or clearly contradicted by context (e.g., a composition described herein as comprising a particular element should be understood as also describing a composition consisting of that element, unless otherwise stated or clearly contradicted by context).

The use of any and all examples, or exemplary language (including "for instance", "for example", "e.g.", "such as" and "as such") in the present specification is intended merely to better illuminate the invention, and does not pose a limitation on the scope of invention unless otherwise indicated.

It should be understood that the various aspects, embodiments, implementations and features of the invention mentioned herein may be claimed separately, or in any combination.

The present invention includes all modifications and equivalents of the subject-matter recited in the claims appended hereto, as permitted by applicable law.

Experimental Section

Preparation of the Compounds of the Invention

The compounds of formula (Id) may be prepared by methods described below, together with synthetic methods known in the art of organic chemistry, or modifications that are familiar to those of ordinary skill in the art. The starting 65 materials used herein are available commercially or may be prepared by routine methods known in the art, such as those

methods described in standard reference books such as "Compendium of Organic Synthetic Methods, Vol. I-XII" 60 (published with Wiley-Interscience). Preferred methods include, but are not limited to, those described below.

The schemes are representative of methods useful in synthesizing the compounds of the present invention. They are not intended to constrain the scope of the invention in any way.

LC-MS Methods

Analytical LC-MS data were obtained using the methods identified below.

Method 25: MS: Ion source: (APPI), Temp 450° C. OR/RNG 20/200 V OR/RNG 5/100 V

Mass: 100-1000 amu

HPLC: Column: dC-18 4.6×30 mm 3 μm Atlantis (Wa-

Column temperature: 40° C., Gradient, reverse phase with

Solvent A: 100% H₂O 0.05% TFA

Solvent B: 95% ACN 5% H₂O 0.035% TFA

Flow: 3.3 ml/min, Injection vol: 15 µl

Gradient: 2% B to 100% B in 2.4 min, 2% B 0.4 min, ₁₅ Method AB01 (Agilent 1200 & 6120): Total run time: 2.8 min, UV: 254 nm.

ELSD: Glass tube: 21° C., Evaporation chamber: 40° C., pressure: 2.3 bar.

Method 550: LC-MS were run on Waters Aquity UPLC-MS consisting of Waters Aquity including column manager, 20 binary solvent manager, sample organizer, PDA detector (operating at 254 nM), ELS detector, and TO-MS equipped with APPI-source operating in positive ion mode.

LC-conditions: The column was Acquity UPLC BEH C18 1.7 μ m; 2.1 \times 50 mm operating at 60° C. with 1.2 ml/min of 25 a binary gradient consisting of water+0.05% trifluoroacetic acid (A) and acetonitrile/water (95:5)+0.05% trifluoroacetic acid.

| 3.85-3.86 min | 100-1% B |
| 3.86-4.50 min | 1% B |
| Total run time: | 4.50 minutes |

List of Abbreviations for Chemical Compounds

BnCl: Benzyl chloride CCl₄: Carbon tetrachloride DIPEA: Diisopropylethylamine DMAP: 4-Dimethylaminopyridine DMF: Dimethylformamide

EtOAc: Ethyl acetate NaH: Sodium hydride MeCN: Acetonitrile Mel: Methyl iodide MeOH: Methanol

MOM-C1: Chloromethyl methyl ether

Pd/C: Palladium on carbon THF: Tetrahydrofuran

TMSCH₂N₂: Trimethylsilyl diazomethane

TMSI: Trimethylsilyl iodide

Preparation of Compounds of the Invention—General Methods

(4aR,10aR)-1-Propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diol hydrochloride [Compound (I)] which can for example be prepared as disclosed in WO 2009/026934 was a substrate to synthesize the compounds of the invention.

30

35

60

R'' = H, $R''' = PO(OH)_2$: (4aR, 10aR)-7-hydroxy-1-propyl-1,2,3,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl phosphate

 $\label{eq:reconstruction} R'' = PO(OH)_2, R'' = H: (4aR,10aR)-6-hydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-7-yl phosphate$

(4aR,10aR)-1-propyl-1,2,3,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diyl bis(phosphate)

Treatment of compound (I) with BnCl and a base such as triethyl amine or K₂CO₃, but not limited to, will afford a mixture of (4aR,10aR)-6-(benzyloxy)-1-propyl-1,2,3,4,4a, 5,10,10a-octahydrobenzo[g]quinolin-7-ol and (4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol; these regioisomers can be separated. Using Mel instead of BnCl will afford the corresponding mixture of methyl ethers, which can be separated.

Compound (I)

The prodrug with two phosphoric acid moieties on the catechol hydroxyl groups can be prepared from (4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diol hydrochloride by reaction with dibenzyl phosphonate and a suitable base like $\rm K_2CO_3$ or DIPEA, but not limited to, followed by global deprotection as described for (4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo [g]quinoline-6,7-diyl bis(phosphate). In a similar manner, the two mono-benzylated catechol derivatives can be converted to the corresponding mono-phosphates as described for (4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl phosphate.

R = Bn, R' = H: (4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4a,5,10,10aoctahydrobenzo[g]quinolin-6-ol

Using these four compounds as substrates for reactions with dibenzyl phosphonate or di-tert-butyl phosphate and a 40 suitable base like K₂CO₃ or DIPEA, but not limited to, followed by global deprotection as by hydrogenolysis or acid treatment will afford mixed prodrugs like (4aR,10aR)-7-methoxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g] quinolin-6-yl phosphate and (4aR,10aR)-6-(benzyloxy)-1- 45 propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-7-yl phosphate as shown above.

Prodrugs wherein the phosphoric acid is attached via a linker to the N atom can be prepared as described for 50 N-bound phosphate and O-benzyl prodrugs like ((1S,4aR, ((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1,2,3,4,4a,5,10, 10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydrogen phosphate.

(4aR,10aR)-6-7-bis (benzyloxy)-1propyl-1,2,3,4,4a,5,10,10aoctahydrobenzo[g]quinoline

((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydrogen phosphate

Mixed O-bound and N-bound prodrugs can be prepared using similar chemistry as described above to afford compounds like ((1S,4aR,10aR)-6-hydroxy-7-methoxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-²⁰ 1-yl)methyl hydrogen phosphate.

(4aR,10aR)-6-(benzyloxy)-7methoxy-1-propyl-1,2,3,4,4a,5,10,10aoctahydrobenzo[g]quinoline

 $((1S,\!4aR,\!10aR)\!-\!6\text{-hydroxy-7-methoxy-1-propyl-}$ 1,2,3,4,4a,5,10,10a-octahydrobenzo[g] quinolin-1-ium-1-yl) methyl hydrogen phosphate

Using an alternative protective group strategy, mixed 10aR)-7-(benzyloxy)-6-hydroxy-1-propyl-1,2,3,4,4a,5,10, 10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydrogen phosphate can be prepared.

(4aR, 10aR)-7-(benzyloxy)-6-(methoxymethoxy)-1propyl-1,2,3,4,4a,5,10,10aoctahydrobenzo[g]quinoline

((1S,4aR, 10aR)-7-(benzyloxy)-6-hydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydrogen phosphate

Exemplified Compounds of the Invention

(4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10aoctahydrobenzo[g]quinoline-6,7-diol hydrochloride

 $(4aR,10aR)\text{--}6,7\text{-}bis(benzyloxy)\text{--}1\text{-}propyl-\\1,2,3,4,4a,5,10,10a\text{-}octahydrobenzo[g]quinolin}$

(4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenozo[g]quinolin-6-ol hydroiodide

Compound (1): (4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline

(4aR,10aR)-1-Propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diol hydrochloride (10.75 g) and $K_2\mathrm{CO}_3$ (17.5 g) were added to a flask, which was degassed under vacuum and purged with N_2 , before DMF (107 mL) and benzyl chloride (8.55 mL) were added and the mixture was stirred at room temperature for 18 hours, then at 100° 65 C. for 5 hours, and at room temperature for 19 hours. $K_2\mathrm{CO}_3$ (7.48 g) and benzyl chloride (6.29 mL) were added and the

mixture was stirred at 100° C. for 5 hours. After cooling to room temperature, the mixture was partitioned between water (500 mL) and heptane (250 mL). The aqueous phase was washed with heptane (3×100 mL) and the combined organic phases were washed with brine (100 mL), dried over Na₂SO₄, filtered, and concentrated to afford the title compound (14.6 g).

Compound (2): (4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol hydroiodide

(4aR,10aR)-6,7-Bis(benzyloxy)-1-propyl-1,2,3,4,4a,5,
 10,10a-octahydrobenzo[g]quinoline (11.9 g) was added to a flask, which was evaporated and purged with N₂, before MeCN (180 mL) was added. The mixture was stirred until homogeneous, before trimethylsilyl iodide (10.0 mL) was added and the mixture was stirred under N₂ at room temperature for 2 hours. MeOH (5.5 mL) was added and the mixture was stirred for 1 hour. Isopropyl acetate/heptane (10/150 mL) was added and the mixture was cooled to 0° C. and stirred for 1 hour. The solid was collected, washed with isopropyl acetate/heptane (3/47 mL), and dried to afford the title compound (7.6 g).

¹H NMR (600 MHz, CDCl₃) δ 10.42 (bs, 1H), 7.43-7.33 (m, 4H), 7.26 (d, J=1.0 Hz, 1H), 6.78 (d, J=8.3 Hz, 1H), 6.58 (d, J=8.3 Hz, 1H), 5.72 (s, 1H), 5.08 (s, 2H), 3.71 (dd, J=11.70, 15.0 Hz, 1H), 3.58 (d, J=11.70, 1H), 3.25-3.11 (m, 4H), 2.94-2.86 (m, 1H), 2.77-2.57 (m, 2H), 2.26 (dd, J=11.70 Hz, 17.0 Hz 1H), 2.19 (d, J=13.80, 1H), 2.01-1.92 (m, 2H), 1.80-1.69 (m, 1H), 1.56-1.53 (m, 1H), 1.39 (qd, J=3.60 Hz, 13.30 Hz, 1H), 1.06 (t, J=7.2 Hz, 3H).

LCMS (method 550), Retention Time=0.55 minutes, $[M+H]^+=352.5 \text{ m/z}$.

(4aR,10aR)-7-methoxy-6-(methoxymethoxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g] quinoline

(4aR,10aR)-7-methoxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol

Compound (3): (4aR,10aR)-7-methoxy-1-propyl-1, 2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol

Step 1

(A1): (4aR,10aR)-7-(benzyloxy)-6-(methoxymethoxy)-1-propyl-1,2,3,4,4a,5,10,10aoctahydrobenzo[g]quinoline

To a mixture of (4aR, 10aR)-7-(benzyloxy)-1-propyl-1,2, 3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol hydroiodide (20 g) in DMF (400 mL) was added NaH (4.17 g, 60% dispersion) slowly at 0° C. under N₂. The mixture was 50 stirred at 0° C. for 30 minutes before MOMCI (3.5 mL) was added drop-wise at 0° C. The mixture was stirred at room temperature for 1 hour before it was poured into water (400 mL) and stirred for 20 minutes and then extracted with EtOAc (300 mL×3). The combined organic layers were 55 washed with brine (500 mL), dried over Na₂SO₄, filtered, and concentrated to afford the title compound (20 g).

Step 2

(A2): (4aR,10aR)-6-(methoxymethoxy)-1-propyl-1, 2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-7-ol

To a solution of (4aR,10aR)-7-(benzyloxy)-6-(methoxymethoxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline (20 g) in MeOH (140 mL) was added Pd/C (10%, 30 g) under N_2 . The suspension was degassed

under vacuum and purged with H_2 . The mixture was stirred under H_2 (50 psi) at room temperature for 12 hours, before the catalyst was filtered off. The filtrate was concentrated to afford the title compound (15.4 g).

Step 3

(A3): (4aR,10aR)-7-methoxy-6-(methoxymethoxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline

To a solution of (4aR,10aR)-6-(methoxymethoxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-7-ol (15 g) in MeOH (150 mL) was added drop-wise (trimethylsilyl) diazomethane (2M in ether, 246 mL) at room temperature over 0.5 hours. The mixture was concentrated to afford the title compound (15 g).

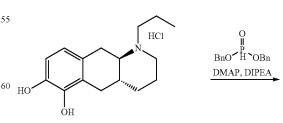

Step 4

Compound (3): (4aR,10aR)-7-methoxy-1-propyl-1, 2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol

A solution of (4aR,10aR)-7-Methoxy-6(methoxymethoxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline (15 g) in 4M HCl in MeOH (150 mL)
was stirred at room temperature for 1 hour, before it was
concentrated. The residue was dissolved in water (100 mL)
and the aqueous layer was basified with NaHCO₃ to pH 7-8.
The aqueous layer was extracted with EtOAc (100 mL and
50 mL). The combined organic layers were washed with
brine (100 mL), dried over Na₂SO₄, filtered, and concentrated to afford the title compound (7 g).

LCMS (method 25), Retention Time=0.95 min, 94.0% purity, [M+H]*=276.1 m/z.

¹H NMR (400 MHz, CDCl₃) δ 6.70 (d, J=8.4 Hz, 1H), 6.62 (d, J=8.0 Hz, 1H), 5.71 (br s, 1H), 3.86 (s, 3H), 3.07-3.18 (m, 2H), 3.01 (dd, J=5.2, 17.6 Hz, 1H), 2.72-2.89 (m, 2H), 2.58-2.68 (m, 1H), 2.29-2.44 (m, 2H), 2.24 (dd, J=12.0, 17.6 Hz, 1H), 1.97 (d, J=13.2 Hz, 1H), 1.70-1.92 (m, 3H), 1.54-1.63 (m, 2H), 1.10-1.23 (m, 1H), 0.93 (t, J=7.2 Hz, 3H).

(4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10aoctahydrobenzo[g]quinoline-6,7-diol hydrochloride

benzyl ((4aR,10aR)-6-((bis(benzyloxy)phosphoryl) oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-7-yl) hydrogen phosphate

benzyl ((4aR,10aR)-7-((bis(benzyloxy)phosphoryl) oxy)-1-propyl-1,2,3,4,4a,5,10,10aoctahydrobenzo[g]quinolin-6-yl) hydrogen phosphate

tetrasodium (4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diyl bis(phosphate)

Compound (4): Benzyl ((4aR,10aR)-6-((bis(benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-7-yl) hydrogen Phosphate and/or benzyl ((4aR,10aR)-7-((bis(benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl) hydrogen Phosphate [Compound (5)]

(4aR,10aR)-1-Propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diol hydrochloride (1 g) and DMAP (117 mg) were added to a flask, which was degassed under vacuum and purged with Ar before CCl₄ (3 mL) was added. The reaction mixture was cooled to 0° C. before MeCN (15 mL), DIPEA (6.66 mL), and dibenzylphosphate (5.02 g) were added. The mixture was stirred at 0° C. for 2 hours, before it was partitioned between aqueous KH2PO4 (0.5 M, 50 mL) and EtOAc (20 mL, 30 mL). The combined 20 organic layers were washed with brine (20 mL), dried over Na₂SO₄, filtered, and concentrated. The residue was purified by prep-HPLC using a Shimadzhu LC20AP instrument (Phenomenex Luna C18 250*50 mm, 10 µm particles col-25 umn operated at room temperature with 80 mL/min of a gradient of water+0.1% TFA (A) and MeCN (B): 0-20 minutes 20% B to 50% B; 20.1-25 minutes 100% B; 25.1-30 minutes 20% B). Crude tetra benzyl ((4aR,10aR)-1-propyl-30 1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diyl) bis(phosphate) (1.6 g) was obtained. The crude was repurified by prep-HPLC using a Shimadzhu LC20AP instrument (Phenomenex Luna C18 250*50 mm, 10 µm particles column operated at room temperature with 80 mL/min of a gradient of water+0.1% TFA (A) and MeCN (B): 0-20 minutes 20% B to 50% B; 20.1-25 minutes 100% B; 25.1-30 minutes 20% B) to afford the title compound(s) (0.4 g)

Compound (6): tetrasodium (4aR,10aR)-1-propyl-1, 2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diyl bis(phosphate)

To a mixture of Pd/C (0.2 g, 50% (w/w)) in THF (20 mL) and water (5 mL) was added Benzyl ((4aR,10aR)-6-((bis (benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-7-yl) hydrogen phosphate and/ or benzyl ((4aR,10aR)-7-((bis(benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl) hydrogen phosphate (0.4 g) and NaHCO₃ (91 mg) under N₂. The suspension was degassed under vacuum and purged with H₂. The mixture was stirred under H₂ (50 psi) at room temperature for 12 hours, before the catalyst was filtered off. The filtrate was concentrated to afford the title compound (0.22 g).

 $^{1}\mathrm{H}$ NMR (400 MHz, D₂O) δ 7.17 (d, J=8.4 Hz, 1H), 6.84 (d, J=8.8 Hz, 1H), 3.55 (d, J=12.0 Hz, 1H), 3.39 (d, J=15.2 Hz, 1H), 3.23-3.32 (m, 3H), 3.11-3.14 (m, 2H), 2.83 (m, 1H), 2.48 (m, 1H), 1.81-2.08 (m, 5H), 1.69-1.71 (m, 1H), 1.40-1.43 (m, 1H), 0.97 (t, J=7.2 Hz, 3H).

QC-LCMS (method 0-30HPLC-AB), Retention Time=2.74 minutes, $[M+H]^+$ =422.1 m/z.

BnO HO

benzyl ((4aR,10aR)-7-(benzyloxy)-1propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g] quinolin-6-yl) hydrogen phosphate

bissodium (4aR,10aR)-7-hydroxy-1propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo [g]quinolin-6-yl phosphate

Compound (7): benzyl ((4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl) hydrogen Phosphate

To an oven-dried microwave flask was added (4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol hydroiodide (2 g) and DMAP (174 50 mg). The flask was degassed under vacuum and purged with argon before MeCN (30 mL) was added. The reaction mixture was cooled to 0° C. before CCl₄ (6 mL), DIPEA (9.91 mL), and dibenzylphosphate (7.46 g) were added. The mixture was stirred at 0° C. for 2 hours, before it was 55 partitioned between aqueous KH₂PO₄ (0.5 M, 50 mL) and EtOAc (20 mL and 30 mL). The combined organic phases were washed with brine (20 mL), dried over Na₂SO₄, filtered, and concentrated. The residue was purified twice by prep-HPLC using a Shimadzhu LC20AP instrument (run 1: 60 Phenomenex Luna C18 250*50 mm, 10 µm particles column operated at room temperature with 80 mL/min of a gradient of water+0.1% TFA (A) and MeCN (B): 0-20 minutes 25% B to 55% B; 20.1-25 minutes 100% B; 25.1-30 minutes 25% B. Run 2: Phenomenex Luna C18 250*40 mm, 10 μm 65 particles column operated at room temperature with 60 mL/min of a gradient of water+0.1% TFA (A) and MeCN

(B): 0-10 minutes 35% B to 55% B; 10.1-12 minutes 100% B; 12.1-15 minutes 35% B) to afford the title compound (0.2 g).

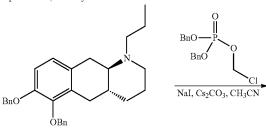

Compound (8): bissodium (4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quino-lin-6-yl Phosphate

To a mixture of Pd/C (0.1 g, 50% (w/w)) in $\rm H_2O$ (2 mL) and THF (10 mL) was added benzyl ((4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g] quinolin-6-yl) hydrogen phosphate (0.2 g) and NaHCO $_3$ (59 mg) under $\rm N_2$. The suspension was degassed under vacuum and purged with $\rm H_2$. The mixture was stirred under $\rm H_2$ (50 psi) at room temperature for 36 hours. The reaction mixture was filtered through a pad of celite and the filtrate was concentrated to afford the title compound (120 mg).

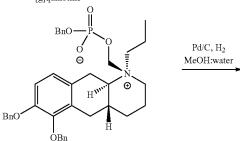

QC-LCMS (method AB01), Retention Time=1.87 min, [M+H]⁺=342.1 m/z.

¹H NMR (400 MHz, DMSO-d₆) δ 6.53 (d, J=8.8 Hz, 1H), 6.42 (d, J=8.0 Hz, 1H), 2.93-3.06 (m, 2H), 2.89 (d, J=10.8 Hz, 1H), 2.61-2.73 (m, 1H), 2.22-2.40 (m, 2H), 2.12 (t, J=14.0 Hz, 2H), 1.95-2.02 (m, 1H), 1.80 (d, J=12.8 Hz, 1H), 1.31-1.60 (m, 4H), 1.20-1.25 (m, 1H), 0.99-1.08 (m, 1H), 0.84 (t, J=7.2 Hz, 3H).

(4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10aoctahydrobenzo[g] quinoline-6,7-diol hydrochloride

(4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1,2,3,4a,5,10,10a-octahydrobenzo [g]quinoline

benzyl ((((1S,4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo [g]quinolin-1-ium-1-yl)methyl)phosphate

((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1,2,3,4,4a,5,10-10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydorgen phosphate

Compound (9) ((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quino-lin-1-ium-1-yl)methyl hydrogen phosphate

Step 1: (4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1, 2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline

To an oven-dried 100 mL round-bottom flask, equipped with a magnetic stir bar, was added (4aR,10aR)-1-propyl- $1,2,3,4,4a,5,10,10a\hbox{-octahydrobenzo[g]} quino line-6,7-dio l$ hydrochloride (0.8 g). The flask was sealed with a septum and evacuated and backfilled with argon (this procedure was 30 repeated 3 times). Degassed methanol (80 mL) was added, followed by addition of benzyl bromide (1.60 mL) and NaOH (1.07 g). The mixture was stirred at room temperature for 10 minutes under argon atmosphere, then heated to 60° C. and stirred for additional 90 minutes. The mixture was 35 cooled to room temperature and concentrated under reduced pressure, then diluted with aqueous sodium bicarbonate (100 mL) and EtOAc (100 mL). The phases were separated, and the EtOAc phase was washed with water and brine (2×50 mL) and the combined aqueous phases were extracted with EtOAc (2×50 mL). The combined EtOAc phases were dried over Na₂SO₄, filtered, and purified by combiflash to afford the title compound (623 mg).

LCMS (Method450): Retention Time=0.73 minutes; 45 [M+H]⁺=442.3 m/z.

Step 2: Benzyl (((1S,4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl) Phosphate

(4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1,2,3,4,4a,5,10, 10a-octahydrobenzo[g]quinoline (200 mg), dibenzyl chloromethyl phosphate (296 mg), NaI (272 mg, 1.812 mmol) and cesium carbonate (443 mg, 1.36 mmol) were dissolved 55 in anhydrous acetonitrile (5.0 mL) and the resulting solution is stirred at 40° C. for 90 minutes under argon atmosphere. The reaction mixture was diluted with EtOAc (50 mL), water (25 mL) and brine (25 mL) and the two phases were separated. The EtOAc phase was washed with water (25 mL) and brine (25 mL). The aqueous phase was extracted with EtOAc (2×25 mL) and the combined EtOAc phases were concentrated. Trituration of the residue from diethyl ether resulted in a solid that was collected and purified by preparative HPLC to afford the title compound (80 mg).

LCMS (Method551): RT=0.89 minutes; [M+H]⁺=642.7

Step 3: ((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1,2, 3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl Hydrogen Phosphate

A solution of benzyl W1S,4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl)phosphate (78 mg) in 20 mL methanol and 2 mL water was passed through the H-Cube (10% Pd/C) at room temperature, 5 bar and with 1.0 mL/min flowrate. The title compound was obtained (32 mg).

¹H NMR (600 MHz, Methanol-d₄) δ 6.66 (d, J=8.0 Hz, 1H), 6.49 (d, J=8.0 Hz, 1H), 5.28 (s, 1H), 5.03 (s, 1H), 3.78 (d, J=12.5 Hz, 1H), 3.69-3.59 (m, 2H), 3.51-3.41 (m, 1H), 3.41-3.34 (m, 1H), 3.16 (dd, J=16.9, 5.0 Hz, 2H), 2.99 (t, J=13.6 Hz, 1H), 2.34 (dd, J=17.4, 10.5 Hz, 1H), 2.30-2.15 (m, 2H), 2.12 (d, J=13.4 Hz, 1H), 1.98-1.78 (m, 3H), 1.52-1.41 (m, 1H), 1.05 (t, J=7.2 Hz, 3H).

The diastereochemistry was proven by NMR ROESY correlations.

QC-LCMS (Method551): Retention Time=0.35 minutes; [M+H]⁺=372.4 m/z.

In Vitro and In Vivo Characterization of Compounds of the Invention

Example 1: Conversion of Compounds in Human Plasma and Hepatocytes

Example 1a: Conversion of Compounds of the Invention in Human Plasma

Frozen human plasma was thawed and then centrifuged at 3200×g for 5 minutes to remove debris. The pH value of the supernatant was then measured and adjusted to 7.4±0.1 by adding 1% phosphoric acid or 1 N sodium hydroxide. 2 µL of dosing solution (50 μM for test compounds and 100 μM for positive control (propantheline bromide)) was mixed with 98 μL of blank plasma to achieve 1 μM test compound and 2 µM positive control of final concentration. The mixture was incubated, and samples were withdrawn from the incubations at the pre-determined time points of 0, 0.5, 1, 2, 4 and 6 hours (in duplicate) at 37° C. in water bath. At each corresponding time point $10\,\mu\text{L}$ inhibitor and $20\,\mu\text{L}$ ascorbic acid and 2 µL formic acid (20%) are added, and then added $400~\mu L$ of "stop solution" (200 ng/mL tolbutamide plus 200 ng/mL labetalol in 50% ACN/MeOH) to precipitate protein. The substance was mixed thoroughly and thereafter centrifugated at 4,000 rpm for 20 minutes. Then an aliquot of supernatant (50 µL) was transferred from each well to a sample plate and mixed with 100 µL ultrapure water. The plate was shaked at 800 rpm for about 10 minutes before submitting to LC-MS/MS analysis.

Example 1b: Conversion of Compounds of the Invention in Human Hepatocytes

Incubations were conducted in 96-well plates at 1 μM compound concentration in duplicate. The hepatocyte cell concentration was 0.5×106 cells/mL used for final incubation at 37° C. in an incubator of 5% CO $_2$ 95% relative humidity. The medium control samples were included at 0 and 60 minutes in the absence of cells. The total organic concentration was 1% (DMSO 0.1%) in the final incubation. The controls, (7-ethoxycoumarin and 7-hydroxycoumarin) was incubated parallel at 3 μM . 2 μL of dosing solution (50 μM for test compounds and 100 μM for positive control) was mixed with 98 μL of 100 mM PBS to achieve 1 μM test

43

compound and 2 μ M positive control of final concentration. The mixture was incubated, and samples were withdrawn from the incubations at pre-determined time points of 0, 0.5, 1, 2, 4 and 6 hours (in duplicate) at 37° C. in water bath. To each sample, 10 μ L inhibitor and 20 μ L ascorbic acid and 2 5 μ L formic acid (20%) were added followed by 400 μ L of stop solution (200 ng/mL tolbutamide plus 200 ng/mL labetalol in 50% ACN/MeOH). The substance was mixed thoroughly and thereafter centrifuged at 4,000 rpm for 20 minutes. An aliquot of supernatant (50 μ L) from each well were transferred to a sample plate and mixed with 100 μ L ultrapure water. The plate was shaked at 800 rpm for about 10 minutes before submitting to LC-MS/MS analysis.

Instrumentation used for analysis of plasma and hepatocyte incubation samples:

Mass spectrometer (LC-MS/MS) Shimadzu LC 20-AD Shimadzu UHPLC API 4000. Analytical column ACQUITY UPLC® BEH Phenyl 1.7 μ m 2.1×50 mm. Mobile phase A: 0.1% Formic Acid in water. Mobile phase B: 0.1% formic acid in acetonitrile. Gradient run from 95/5% to 5/95 in 2.0 20 minutes. Flow rate 0.7 mL/min. MRM monitoring (multiple reaction monitoring) of test item and the added analytical standards (Labetalol or Tolbutamide).

Example 2: 5-HT2B Agonist Activity and Binding Assav

5-HT2B Agonist Activity Assay

Evaluation of the agonist activity of compounds (I), (Ia), (Ib), (Ic), compound (2), compound (3), compound (6), 30 compound (8), and compound (9) at the human 5-HT2B receptor was performed by Eurofins/Cerep (France) measuring the compound effects on inositol monophosphate (IP1) production using the HTRF detection method. Briefly, the human 5-HT2B receptor was expressed in transfected 35 CHO cells. The cells were suspended in a buffer containing 10 mM Hepes/NaOH (pH 7.4), 4.2 mM KCl, 146 mM NaCl, 1 mM CaCl₂, 0.5 mM MgCl₂, 5.5 mM glucose and 50 mM LiCl, then distributed in microplates at a density of 4100 cells/well and incubated for 30 minutes at 37° C. in the 40 presence of buffer (basal control), test compound or reference agonist. For stimulated control measurement, separate assay wells contained 1 µM 5-HT. Following incubation, the cells were lysed and the fluorescence acceptor (fluorophen D2-labeled IP1) and fluorescence donor (anti-IP1 antibody 45 labeled with europium cryptate) were added. After 60 minutes at room temperature, the fluorescence transfer was measured at lambda(Ex) 337 nm and lambda(Em) 620 and 665 nm using a microplate reader (Rubystar, BMG). The IP1 concentration was determined by dividing the signal mea- 50 sured at 665 nm by that measured at 620 nm (ratio). The results were expressed as a percent of the control response to 1 µM 5-HT. The standard reference agonist was 5-HT, which was tested in each experiment at several concentrations to generate a concentration-response curve from which 55 its EC_{50} value is calculated as described above for dopamine functional assays.

5-HT2B Binding Assay

Evaluation of the affinity of compounds for the human 5-HT2B receptor was determined in a radioligand binding 60 assay at Eurofins/Cerep (France). Membrane homogenates prepared from CHO cells expressing the human 5HT2B receptor were incubated for 60 minutes at room temperature with 0.2 nM [125I](±)DOI (1-(4-iodo-2, 5-dimethoxyphenyl)propan-2-amine) in the absence or presence of the test 65 compound in a buffer containing 50 mM Tris-HCl (pH 7.4), 5 mM MgCl₂, 10 μM pargyline and 0.1% ascorbic acid.

44

Nonspecific binding is determined in the presence of 1 μ M (\pm)DOI. Following incubation, the samples were filtered rapidly under vacuum through glass fiber filters (GF/B, Packard) presoaked with 0.3% polyethyleneimine (PEI) and rinsed several times with ice-cold 50 mM Tris-HCl using a 96-sample cell harvester (Unifilter, Packard). The filters were dried and counted for radioactivity in a scintillation counter (Topcount, Packard) using a scintillation cocktail (Microscint 0, Packard). The results are expressed as a percent inhibition of the control radioligand specific binding. The standard reference compound was (\pm)DOI, which was tested in each experiment at several concentrations to obtain a competition curve from which its IC₅₀ is calculated.

TABLE 3

| In vitro activities for compounds of the invention obtained according to Example 2 | | |
|--|--------------|-----------------------------------|
| | Compound | 5-HT2B EC ₅₀ (nM)/Emax |
| Parent compound | (1) | 2900 nM/50% |
| Prodrugs in the | (1a) | >6000 nM, 58% @ 30 μM |
| state of the art | (1b) | 3.8 nM/79% |

* indicate binding affinity (% inhibition of control, specific binding at concentration indicated).

Example 3: PK Experiments in Rats

For all the experiments, blood samples of approximately 0.68 mL were drawn from the tail or sublingual vein and put into K₃EDTA tubes that had been pre-cooled and prepared with stabilizing solution consisting of 80 µL ascorbic acid and 40 µL 100 mM D-saccharic acid 1,4 lactone in water. The tubes were inverted gently 6-8 times to ensure thorough mixing and then placed in wet ice. The collecting tube was placed in wet ice for up to 30 minutes until centrifugation. Once removed from the wet ice the centrifugation was initiated immediately. Immediately after end of centrifugation the samples were returned to wet ice. Three sub-samples of 130 µL plasma were transferred to each of three appropriately labelled cryo tubes containing 6.5 uL pre-cooled formic acid (20%) (the tubes were pre-spiked and stored refrigerated prior to use). The tube lid was immediately replaced and the plasma solution was thoroughly mixed by inverting gently 6-8 times. The samples were stored frozen at nominally -70° C. within 60 minutes after sampling. Centrifugation conditions at 3000 G for 10 minutes at 4° C. Plasma was placed on water-ice following collection. Final storage at approximately -70° C.

Plasma samples were analyzed by solid phase extraction or direct protein precipitation followed by UPLC-MS/MS. MS detection using electrospray in the positive ion mode with monitoring of specific mass-to-charge transitions for compound (I) using internal standards for correcting the response. The concentration-time data was analyzed, using standard software using appropriate noncompartmental techniques to obtain estimates of the derived PK parameters. Instrumentation Used for Analysis of Compound (I) from Dosing Compound (Ia):

Mass spectrometer (LC-MS/MS) Waters Acquity-Sciex API 5000. Analytical column Waters BEH UPLC Phenyl

 100×2.1 mm column, $1.7~\mu m$ particle size. Mobile phase A: 20~mM ammonium formate (aq)+0.5% formic acid. Mobile phase B: Acetonitrile. Gradient run from 95/5% to 2/98 in 6.1 minutes. Flow rate 0.5 mL/min. MRM monitoring (multiple reaction monitoring) of test item and the added $_5$ analytical standards.

Dosing and blood sampling: Han Wistar rats were supplied by Charles River Laboratories, Sulzfeld, Germany. An artificial, automatically controlled, light and dark cycle of 12 hours was maintained. The rats received a standard laboratory diet from Brogaarden (Altromin 1324 pellets). The rats

46

Wistar rats were supplied by Envigo, UK. An artificial, automatically controlled, light and dark cycle of 12 hours was maintained. The rats received a standard laboratory diet Teklad 2014C. The rats had unrestricted access to the diet. Male Han Wistar rats were dosed a single oral gavage administration of test compound, orally by gavage. Rats were given 494 µg/kg (Ic), 392 µg/kg compound (8), 426 µg/kg compound (9), 359 µg/kg compound (3) and 551 µg/kg compound (2). Blood samples from 3 male animals were collected on the following time points at Day 1: 0.25, 0.5, 1, 2, 4, 8, and 24 hours after dosing

TABLE 4

PK parameters for (4aR,10aR)-1-n-Propyl-1,2,3,4,4a,5,10,10a-octahydro-benzo [g]quinoline-6,7-diol (compound (1)) after oral dosing of 0.300 mg/kg (1a), 0.300 mg/kg (1b), 551 μg/kg compound (2), 359 μg/kg compound (3), 392 μg/kg compound (8) and 426 μg/kg compound (9), and to Wistar rats according to Example 3

| | compound | $\begin{array}{c} T_{max} \\ (h) \end{array}$ | C _{max} (pg/mL) | AUC ₀₋₂₄ (pg*h/mL) | Exposure at 24 h (pg/mL) |

had unrestricted access to the diet. During the study (a 4-week toxicity study) the rats received once daily doses of $_{30}$ (Ia) orally by gavage. From rats given 300 μ g/kg (Ia), blood samples) from 3 male satellite animals were collected on the following time points at Day 29: 0.5, 1, 2, 4, 6, 8, 12 and 24 hours after dosing.

Instrumentation Used for Analysis of Compound (I) from ³⁵ Dosing of Compound (Ib):

Mass spectrometer (LC-MS/MS) Waters Acquity-Sciex API 5000. Analytical column Waters BEH UPLC Phenyl 100×2.1 mm column, 1.7 µm particle size. Mobile phase A: 40 mM ammonium formate (aq)+0.5% formic acid. Mobile phase B: Acetonitrile. Gradient run from 95/5% to 2/98 in 6.1 minutes. Flow rate 0.5 mL/min. MRM monitoring of test item and the added analytical standards.

Dosing and blood sampling: Han Wistar rats were supplied by Charles River Laboratories, UK. An artificial, automatically controlled, light and dark cycle of 12 hours was maintained. The rats received a standard laboratory diet (Teklad 2014C Diet.). The rats had unrestricted access to the diet. During the study (a 26-week toxicity study) the rats received once daily doses of (Ib) orally by gavage. From rats given 300 $\mu g/kg$ (Ib), blood samples from 3 male satellite animals were collected on the following time points at day 182: 0.5, 1, 2, 4, 8 and 24 hours after dosing.

Instrumentation Used for Analysis of Compound (I) from Dosing of Compound (Ic), Compound (2), Compound (3), Compound (8), and Compound (9)

Mass spectrometer (LC-MS/MS) Waters Acquity-Waters Xevo TO-S. Analytical column Acquity BEH C18 100×2.1 mm, 1.7 μ m. Mobile phase A: 20 mM NH₄—Formate+0.2% formic acid. Mobile phase B: Acetonitrile+0.2% formic acid. Gradient run from 95/5% to 5/95% in 11.0 minutes. Flow rate 0.3 mL/min. MRM monitoring of test item and the added analytical standards.

Dosing and blood sampling for compound (Ic), compound (2), compound (3), compound (8), and compound (9): Han

The invention claimed is:

1. A compound according to formula (Id)

$$\begin{array}{c} R3 \\ N \\ R2 \end{array}$$

or a pharmaceutically acceptable salt thereof, wherein R1, R2 and R3 are according to a), b), or c)

a) R1 is substituent (i) below; and
 R2 is selected from H, C₁-C₆ alkyl, benzyl and substituent (i) below;

and R3 is absent;
b) R1 is selected from H, C₁-C₆ alkyl, benzyl and substituent (i) below; and R2 is substituent (i) below; and R3 is absent;

wherein * indicates the attachment point,

or

below:

c) R1 and R2 are both H and R3 is substituent (ii) below, N is positively charged,

25

35

and wherein * indicates the attachment point; and wherein

R4 and R5 are each independently selected from H, C_1 - C_6 alkyl, phenyl, benzyl, C_3 - C_6 cycloalkyl and methyl substituted with C_3 - C_6 cycloalkyl.

2. The compound according to claim 1, wherein the compound is a compound of formula (Ie),

$$\begin{array}{c} \text{(Ie)} \\ \\ \text{R1} \\ \\ \text{R2} \end{array}$$

or a pharmaceutically acceptable salt thereof, wherein

R1 and R2 are according to a) or b) below:

a) R1 is substituent (i) below; and

R2 is selected from H, C₁-C₆ alkyl, benzyl and substituent (i) below;

b) R1 is selected from H, C_1 - C_6 alkyl, benzyl and substituent (i) below; and

R2 is substituent (i) below;

wherein * indicates the attachment point; and wherein

R4 and R5 are each independently selected from H, C_1 - C_6 alkyl, phenyl, benzyl, C_3 - C_6 cycloalkyl and methyl substituted with C_3 - C_6 cycloalkyl.

 ${f 3.}$ The compound or pharmaceutically acceptable salt thereof according to claim ${f 1,}$ wherein

R1 is H and R2 is substituent (i) and R3 is absent.

- 4. The compound or pharmaceutically acceptable salt thereof according to claim 3, wherein at least one of R4 and R5 is benzyl.
- **5**. The compound or pharmaceutically acceptable salt 55 thereof according to claim **1**, wherein

R1 is substituent (i) and R2 is H and R3 is absent.

- **6.** The compound or pharmaceutically acceptable salt thereof according to claim **5**, wherein at least one of R4 and R5 is benzyl.
- 7. The compound or pharmaceutically acceptable salt thereof according to claim 1, wherein

R1 and R2 are both independently substituent (i), and R3

8. The compound or pharmaceutically acceptable salt 65 thereof according to claim **7**, wherein at least one of R4 and R5 is benzyl.

9. The compound or pharmaceutically acceptable salt thereof according to claim 1, wherein

R1 and R2 are both H; and

R3 is substituent (ii).

- 10. The compound or pharmaceutically acceptable salt thereof according to claim 9, wherein at least one of R4 and R5 is benzyl.
- 11. The compound or pharmaceutically acceptable salt thereof according to claim 1, wherein

R4 and R5 are both H.

12. The compound or pharmaceutically acceptable salt thereof according to claim 1, wherein

at least one of R4 and R5 is benzyl.

13. The compound according to claim 1, wherein the compound is selected from the group consisting of:

benzyl ((4aR,10aR)-6-((bis(benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quino-lin-7-yl) hydrogen phosphate;

benzyl ((4aR,10aR)-7-((bis(benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quino-lin-6-yl) hydrogen phosphate;

(4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahyd-robenzo[g]quinoline-6,7-diyl bis(dihydrogen phosphate);

benzyl ((4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5, 10,10a-octahydrobenzo[g]quinolin-6-yl) hydrogen phosphate;

(4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl dihydrogen phosphate; and

((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1,2,3,4,4a,5,10, 10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methy hydrogen phosphate;

or a pharmaceutically acceptable salt of any of these compounds.

14. The compound according to claim **1**, wherein the compound is selected from the group consisting of:

Compound (6): (4aR,10aR)-1-propyl-1,2,3,4,4a,5,10, 10a-octahydrobenzo[g]quinoline-6,7-diyl bis(dihydrogen phosphate);

Compound (8): (4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4, 4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl dihydrogen phosphate; and

Compound (9): ((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methy 1 hydrogen phosphate;

or a pharmaceutically acceptable salt of any of these compounds.

15. A pharmaceutical composition comprising a therapeutically effective amount of the compound or pharmaceutically acceptable salt thereof according to claim 1, and one or more pharmaceutically acceptable carriers or diluents.

16. The pharmaceutical composition of claim 15, wherein the compound or pharmaceutically acceptable salt thereof is selected from the group consisting of:

benzyl ((4aR,10aR)-6-((bis(benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quino-lin-7-yl) hydrogen phosphate;

benzyl ((4aR,10aR)-7-((bis(benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quino-lin-6-yl) hydrogen phosphate;

(4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinoline-6,7-diyl bis(dihydrogen phosphate);

benzyl ((4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5, 10,10a-octahydrobenzo[g]quinolin-6-yl) hydrogen phosphate;

(4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl dihydrogen phosphate; and

((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1,2,3,4,4a,5,10, 10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydrogen phosphate;

or a pharmaceutically acceptable salt of any of these compounds.

17. A method for the treatment of Parkinson's Disease; which method comprises the administration of a therapeutically effective amount of a compound or pharmaceutically acceptable salt thereof according to claim 1, to a patient in need thereof.

18. The method of claim **17**, wherein the compound or pharmaceutically acceptable salt thereof is selected from the group consisting of:

benzyl ((4aR,10aR)-6-((bis(benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quino-lin-7-yl) hydrogen phosphate;

benzyl ((4aR,10aR)-7-((bis(benzyloxy)phosphoryl)oxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl) hydrogen phosphate;

(4aR,10aR)-1-propyl-1,2,3,4,4a,5,10,10a-octahyd-robenzo[g]quinoline-6,7-diyl bis(dihydrogen phosphate);

benzyl ((4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5, 25 10,10a-octahydrobenzo[g]quinolin-6-yl) hydrogen phosphate;

(4aR,10aR)-7-hydroxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-yl dihydrogen phosphate; and

((1S,4aR,10aR)-6,7-dihydroxy-1-propyl-1,2,3,4,4a,5,10, 10a-octahydrobenzo[g]quinolin-1-ium-1-yl)methyl hydrogen phosphate;

or a pharmaceutically acceptable salt of any of these compounds.

19. A compound which is (4aR,10aR)-7-methoxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol, or a pharmaceutically acceptable salt thereof.

20. A pharmaceutical composition comprising a therapeutically effective amount of a compound according to formula 40 (Id)

or a pharmaceutically acceptable salt thereof, wherein R1, R2 and R3 are according to a) or b) below: a) R1 and R2 are each independently selected from H,

 a) R1 and R2 are each independently selected from H, C₁-C₆ alkyl, benzyl and substituent (i) below, and R3 is absent,

60

and wherein * indicates the attachment point, with the proviso that R1 and R2 cannot both be H; or

b) R1 and R2 are both H and R3 is substituent (ii) below, N is positively charged,

and wherein * indicates the attachment points; and wherein

R4 and R5 are each independently selected from H, C_1 - C_6 alkyl, phenyl, benzyl, C_3 - C_6 cycloalkyl and methyl substituted with C_3 - C_6 cycloalkyl;

and one or more pharmaceutically acceptable carriers or diluents.

21. The pharmaceutical composition of claim 20, wherein the compound is selected from

4aR,10aR)-7-methoxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol;

(4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1,2,3,4,4a,5,10, 10a-octahydrobenzo[g]quinoline;

(4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol;

or a pharmaceutically acceptable salt of any of these compounds.

22. A method for the treatment of Parkinson's Disease which method comprises the administration of a therapeutically effective amount of a compound according to formula (Id)

$$\begin{array}{c} R3 \\ N \\ R2 \end{array}$$

or a pharmaceutically acceptable salt thereof,

wherein R1, R2 and R3 are according to a) or b) below:

 a) R1 and R2 are each independently selected from H, C₁-C₆ alkyl, benzyl and substituent (i) below, and R3 is absent,

and wherein * indicates the attachment point, with the proviso that R1 and R2 cannot both be H; or

b) R1 and R2 are both H and R3 is substituent (ii) below, N is positively charged,

and wherein * indicates the attachment points; and wherein

R4 and R5 are each independently selected from H, C_1 - C_6 10 alkyl, phenyl, benzyl, C_3 - C_6 cycloalkyl and methyl substituted with C_3 - C_6 cycloalkyl;

to a patient in need thereof.

23. The method of treatment of claim 22 wherein said compound is selected from

4aR, 10aR)-7-methoxy-1-propyl-1,2,3,4,4a,5,10,10a-octahydrobenzo[g]quinolin-6-ol;

(4aR,10aR)-6,7-bis(benzyloxy)-1-propyl-1,2,3,4,4a,5,10, 10a-octahydrobenzo[g]quinoline;

(4aR,10aR)-7-(benzyloxy)-1-propyl-1,2,3,4,4a,5,10,10a- 20 octahydrobenzo[g]quinolin-6-ol;

or a pharmaceutically acceptable salt of any of these compounds.
