United States Patent	12403150
Kind Code	B2
Date of Patent	September 02, 2025
Inventor(s)	Stamets; Paul Edward

Tryptamine compositions for enhancing neurite outgrowth

Abstract

Described herein are neurotrophic and nootropic compositions and methods for treating subjects with such compositions. In one aspect the composition comprises one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof optionally combined with one or more phenethylamines or amphetamines in pure form or extracts from a plant or mushroom, or combinations thereof, optionally one or more erinacines or hericenones in pure form, extracts from *Herichium* mushroom species (e.g., *H. erinaceus*, *H. coralloides*, *H. ramosum*) or combinations thereof, optionally one or more cannabinoids in pure form or extracts from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*, optionally, one or more adverse compounds, and optionally one or more pharmaceutically acceptable excipients.

Inventors:	Stamets; Paul Edward (Shelton, WA)
Applicant:	TURTLE BEAR HOLDINGS, LLC (Shelton, WA)
Family ID:	75908422
Assignee:	TURTLE BEAR HOLDINGS, LLC (Shelton, WA)
Appl. No.:	19/040329
Filed:	January 29, 2025

Background/Summary

CROSS-REFERENCE TO RELATED APPLICATIONS (1) This application is a continuation of U.S. patent application Ser. No. 18/475,724, filed Sep. 27, 2023, which is a continuation of U.S. patent application Ser. No. 17/570,054, filed Jan. 6, 2022, which is a continuation of U.S. patent application Ser. No. 16/951,009, filed Nov. 18, 2020, which claims priority to U.S. Provisional Patent Application

TECHNICAL FIELD

(1) Described herein are neurotrophic and nootropic compositions and methods for treating subjects with such compositions. In one aspect the composition comprises one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof optionally combined with one or more phenethylamines or amphetamines in pure form or extracts from a plant or mushroom, or combinations thereof, optionally one or more erinacines or hericenones in pure form, extracts from *Herichium* mushroom species (e.g., *H. erinaceus*, *H. coralloides*, *H. ramosum*) or combinations thereof, optionally one or more cannabinoids in pure form or extracts from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*, optionally, one or more adverse compounds, and optionally one or more pharmaceutically acceptable excipients.

BACKGROUND

(2) Serotonin (5-hydroxytryptamine, 5-HT) plays a significant role in influencing many central and peripheral processes. 5-HT-selective pharmacotherapies have been developed to treat a wide variety of medical problems including depression, anxiety, schizophrenia, migraine, emesis, and appetite control. 5-HT exerts its influence through activation of fourteen distinct receptor subtypes in seven separate families. There is interest in the three receptor subtypes of the 5-HT.sub.2 family, 5-HT.sub.2A, 5-HT.sub.2B, and 5-HT.sub.2C. Modulation of the 5-HT.sub.2C receptor subtype has been shown to play a role in numerous human diseases including obesity, obsessive-compulsive disorder (OCD), sexual dysfunction, epilepsy, schizophrenia, anxiety disorders, among a variety of other psychiatric disorders.

(3) Psilocybin (4-phosphoryloxy-N,N-dimethyltryptamine) is an agonist at the 5-HT.sub.2A and 5-HT.sub.2C receptors. Psilocybin's binding potency at 5-HT.sub.2A correlates with its activity as a hallucinogen in humans. More than 40 years ago, derivatives of psilocybin were reported by workers at Sandoz. See Hofmann and Troxler, U.S. Pat. Nos. 3,075,992; 3,078,214. Recent studies have shown that psilocybin has neurogenerative properties. See Catlow et al., "Effects of psilocybin on hippocampal neurogenesis and extinction of trace fear conditioning," *Expt. Brain Res.* 228:481-491 (2013); Phan et al. "Edible and Medicinal Mushrooms: Emerging Brain Food for the Mitigation of Neurodegenerative Diseases," *J. Medic. Foods* 20 (1): 1-10 (2017). Schartner et al. reported substantial increased global neural signal diversity in a psilocybin-human clinical study. See *Nature Scientific Reports*, 7:46421 (2017). And, Ly et al. showed that dimethyltryptamine, 2,5-dimethoxy-4-iodoamphetamine (DOI), and LSD promoted neurogenesis. See Ly et al., "Psychedelics Promote Structural and Functional Neural Plasticity," *Cell Rep.* 23:3170-3182 (2018). Recent studies have shown that monoamine oxidase (MAO) inhibitors increase the pharmacological effects of tryptamines. See Blei et al., "Simultaneous Production of Psilocybin and a Cocktail of β -Carboline Monoamine Oxidase Inhibitors in 'Magic' Mushrooms," *Chem. Eur. J.* 26 (3): 729-734 (2020).

(4) Lion's Mane (*Herichium erinaceus*), Bear's Head (*H. coralloides*), or Comb Tooth (*H. ramosum*) mushrooms and mycelium are reported to influence myelin regeneration myelin on the axons of nerves. Two cyanthane terpenes the erinacines and hericenones are thought to promote NGF (nerve growth factor) synthesis. See Friedman, "Chemistry, Nutrition, and Health-Promoting Properties of *Herichium erinaceus* (Lion's Mane) Mushroom Fruiting Bodies and Mycelia and Their Bioactive Compounds," *J. Agricult. Food Chem.* 63:7108-7123 (2015). Recent studies have identified erinacines O and P as inhibitors of gliomas in human U87 cells. Zhang et al., "Erinacerins, Novel Glioma Inhibitors from *Herichium erinaceus*, Induce Apoptosis of U87 Cells through Bax/Capase-2 Pathway," *Anticancer Agents Med. Chem.* Aug. 3, 2020; doi: 10.2174/1871520620666200804104243.

(5) The combination of sub-hallucinogenic "microdoses" of tryptamines, phenethylamines, or amphetamines with other neurogenic compounds such as the erinacines and hericenones, cannabinoids and other neurogenic or nootropic natural products can be used to treat a variety of neuronal disorders or enhance cognition and sensory motor neuron functioning. There is a need for such neurogenic and nootropic compositions.

SUMMARY

(6) One embodiment described herein is a composition comprising norpsilocin or a salt or hydrate

thereof or combinations combined with one or more erinacines or hericenones in pure form, extracts or isolates from *Hericium* mushroom species, or combinations thereof. In one aspect, the erinacines or hericenones comprise Erinacine A, Erinacine B, Erinacine C, Erinacine D, Erinacine E, Erinacine F, Erinacine G, Erinacine H, Erinacine I, Erinacine J, Erinacine K, Erinacine O, Erinacine P, Erinacine Q, Erinacine R, Erinacol, other Erinacines Hericenone A, Hericenone B, Hericenone C, Hericenone D, Hericenone E, Hericenone F, Hericenone G, Hericenone H, other hericenones, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. In another aspect, the composition comprises an extract of extracts or isolates from *Hericium erinaceus*. In another aspect, the composition further comprises baeocystin or a salt or hydrate thereof. In another aspect, the composition comprises norbaeocystin and a purified erinacine, hericenone, salts thereof, hydrates thereof, or combination thereof. In another aspect, the composition further comprises one or more cannabinoids in pure form or extracts or isolates from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*. In another aspect, the cannabinoids comprise one or more of Δ^8 -tetrahydrocannabinol (THC), Δ^9 -tetrahydrocannabinol, tetrahydrocannabinolic acid (THCA), cannabidiol (CBD), cannabidiolic acid (CBDA), cannabinol (CBN), cannabigerol (CBG), cannabichromene (CBC), cannabicyclol (CBL), cannabivarin (CBV), tetrahydrocannabivarin (THCV), cannabidivarin (CBDV), cannabichromevarin (CBCV), cannabigerovarin (CBGV), cannabigerol monomethyl ether (CBGM), cannabielsoin (CBE), cannabicitran (CBT), among others, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. In another aspect, the composition further comprises one or more phenethylamines or amphetamines in pure form or extracts or isolates from plants comprising thereof. In another aspect, the phenethylamines or amphetamines comprises 3,4,5-trimethoxyphenethylamine (Mescaline), 2,5-dimethoxy-4-methylamphetamine (DOM), 2,5-dimethoxy-4-bromophenethylamine (2C-B), 2,5-dimethoxy-4-ethylphenethylamine (2C-E), 2,5-dimethoxy-4-ethylthiophenethylamine (2C-T-2), 2,5-dimethoxy-4-propylthiophenethylamine (2C-T-7), p-methoxy-amphetamine (PMA), 2,4-dimethoxy-amphetamine (2,4-DMA), 3,4-dimethoxy-amphetamine (3,4-DMA), 3,4-methylenedioxy-amphetamine (MDA), 3-methoxy-4,5-methylenedioxy-amphetamine (MMDA), 2-methoxy-3,4-methylenedioxyamphetamine (MMDA-3a), 2-methoxy-4,5-methylenedioxyamphetamine (MMDA-2), 3,4,5-trimethoxyamphetamine (TMA), 2,4,5-trimethoxyamphetamine (TMA-2), 2,5-dimethoxy-3,4-methylenedioxyamphetamine (DMMDA), 2,3-dimethoxy-4,5-methylenedioxyamphetamine (DMMDA-2), 2,3,4,5-tetramethoxyamphetamine (TeMA), (R)-2,5-dimethoxy-4-iodoamphetamine, inter alia, pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. In another aspect, the composition further comprises one or more adverse compounds comprising niacin, ipecac, apomorphine, bittering agents (e.g., denatonium benzoate), capsaicin, capsacin dihydrocapsaicin, nordihydrocapsaicin, homocapsaicin, homodihydrocapsaicin, capsaicinoids, gingerol, piperine, isopiperine, zingerone, shogaol, vanillylamide derivatives, or combinations thereof. In another aspect, the adverse is niacin. In another aspect, the composition comprises an extract of extracts or isolates from *Hericium erinaceus* and niacin. In another aspect, the composition comprises an extract of extracts or isolates from *Pochonia chlamydosporia*. In another aspect, the composition comprises ketamine, pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. In another aspect, the composition comprises 0.001 mg to 0.01 mg, 0.01 mg to 0.1 mg, 0.01 mg to 1 mg, 0.1 mg to 5 mg, 0.1 mg to 1 mg, 0.5 mg to 1 mg, 0.5 mg to 5 mg, 0.25 mg to 1 mg, 0.2 mg to 2 mg, or 0.2 mg to 5 mg of norpsilocin or an amount of a mushroom extract or mushroom to provide an equivalent dose. In another aspect, the composition comprises 1 μ g to 5 μ g, 1 μ g to 10 μ g, 5 μ g to 10 μ g, 10 μ g to 5 mg, 10 μ g to 100 μ g, 100 μ g to 1 mg, 500 μ g to 1 mg, 500 μ g to 5 mg, 1 mg to 5 mg, 100 μ g to 1 mg, 100 μ g to 500 μ g, 100 μ g to 250 μ g; 250 μ g to 1 mg; 750 μ g to 1 mg, or 250 μ g to 750 μ g of one or more erinacines or hericenones or an amount of a mushroom extract or mushroom to provide an equivalent dose. In another aspect, the composition comprises 0.01 mg to 0.1 mg, 0.01 mg to 1 mg, 0.1 mg to 10 mg, 0.1 mg to 1 mg, 0.5 mg to 1 mg, 0.5 mg to 5 mg, 0.25 mg to 1 mg, 0.2 mg to 2 mg, 0.2 mg to 5 mg, or 1 mg to 10 mg of one or more cannabinoids or an amount of a plant extract or plant to provide an equivalent dose. In another aspect, the composition comprises 0.1 mg to 1 mg, 1 mg to 10 mg, 10 mg to 100 mg, 10 mg to 50 mg, 50 mg to 100 mg, 20 mg to 80 mg, 20 mg to 50 mg, 50 mg to

100 mg, 50 mg to 80 mg, or 10 mg to 80 mg of one or more phenethylamines or amphetamines or an amount of a plant or mushroom extract or plant or mushroom to provide an equivalent dose. In another aspect, the composition comprises 0.1 mg to 10 mg, 1 mg to 500 mg, 1 mg to 100 mg, 200 mg to 500 mg, 50 mg to 200 mg, 10 mg to 50 mg, 50 mg to 200 mg, 1 mg to 200 mg, or 1 mg to 50 mg of one or more adversives. In another aspect, the composition comprises one or more pharmaceutically acceptable excipients. In another aspect, the composition is a powder admixture, liquid, suspension, or emulsion. In another aspect, the composition further comprises one or more extracts or pure chemicals from other fungi comprising one or more of, *Antrrodia*, *Beauveria*, *Copelandia*, *Cordyceps*, *Fomitopsis*, *Ganoderma*, *Grifola*, *Hericium*, *Hypsizygus*, *Inonotus*, *Isaria*, *Panaeolus*, *Phellinus*, *Piptoporus*, *Pleurotus*, *Polyporus* or *Trametes* species or combinations thereof; a mycelium extract of *Antrrodia*, *Beauveria*, *Copelandia*, *Cordyceps*, *Fomitopsis*, *Ganoderma*, *Grifola*, *Hericium*, *Hypsizygus*, *Inonotus*, *Isaria*, *Panaeolus*, *Phellinus*, *Piptoporus*, *Pleurotus*, *Polyporus* or *Trametes* species or combinations thereof; or a fruiting body extract of *Antrrodia*, *Beauveria*, *Copelandia*, *Cordyceps*, *Fomitopsis*, *Ganoderma*, *Grifola*, *Hericium*, *Hypsizygus*, *Inonotus*, *Isaria*, *Panaeolus*, *Phellinus*, *Piptoporus*, *Pleurotus*, *Polyporus* or *Trametes* species or combinations thereof, or combinations thereof. In another aspect, the composition further comprises one or more extracts or pure chemicals from other plant species comprising *Bacopa* species (*Bacopa monnien*), Gotu kola (*Centella asiatica*), and Ginkgo (*Ginkgo biloba*, Ginger (*Zingiber officinale*), Holy Basil (*Ocimum sanctum*), Hu Zhang (*Polygonum cuspidatum*), Oregano (*Origanum vulgare*, *Origanum onites*), Rosemary (*Rosmarinus officinalis*, *Rosmarinus eriocalyx*, species in the genus *Rosmarinus*), Turmeric (*Curcuma longa*), Green Tea (*Camellia sinensis*), lavender (*Lavandula spica* and related species in the genus *Lavandula*), skullcap (*Scutellaria lateriflora*) oat straw (*Avena sativa*, *Avena byzantina*), *Salvia divinorum*, aka Diviner's Sage, *Banisteriopsis caapi* and *Psychotria* species, plants containing ibogaine (*Tabemanthe iboga*, *Voacanga africana* and *Tabemaemontana undulate*), peyote (*Lophophora williamsii*), the seeds of morning glory (*Ipomoea tricolor* and related species) and Hawaiian baby wood rose (*Argyrea nervosa*), *Acacia confusa*, *Acacia obtusifolia*, *Acacia simplicifolia*, *Desmanthus Illinoensis*, or *Cannabis* (*Cannabis sativa*, *C. indica* and *C. ruderalis*) or combinations thereof. In another aspect, the composition is effective to treat, alleviate, prevent or ameliorate psychiatric and mood disorders comprising serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, depression, anxiety, major depressive disorder, treatment resistant depression, persistent depression, manic depression or bipolar disorder, depressive psychosis, perinatal depression, premenstrual dysphoric disorder, seasonal depressions, situational depression, panic disorder, obsessive compulsive disorder, post-traumatic stress disorder, attention deficit/hyperactivity disorder, sleep disorders, eating disorders, schizophrenia, personality disorders, substance abuse disorders (drug abuse, addiction, alcoholism); neuronal injuries or physical neurodegeneration (e.g., physical injury, head trauma, spinal cord trauma, concussion, peripheral neuron trauma, paralysis, ischemia, hypoxia, stroke; organophosphates, lead, heavy metals, nerve agents, other toxic compounds, prions, amyloid plaque, neurotoxic viruses, stress); neurodegenerative diseases (e.g., Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, multiple sclerosis, frontotemporal dementia, Huntington's disease, adrenal leukodystrophy, Alexander's disease, Alper's disease, Alzheimer's disease, amyotrophic lateral sclerosis, balo concentric sclerosis, Canavan disease, Charcot-Marie-Tooth disease, childhood ataxia with central nervous system hypomyelination, chronic idiopathic peripheral neuropathy, frontotemporal dementia, Huntington's disease, Krabbe disease, monomelic amyotrophy, multiple sclerosis (MS), neurodegeneration, neuromyelitis optica, neuropathic pain, neurosarcoidosis, Parkinson's disease, Pelizaeus-Merzbacher disease, primary lateral sclerosis, progressive supranuclear palsy, radicular pain, radiculopathic pain, Schilder's disease, sciatic pain, sciatica, subacute necrotizing myelopathy, transverse myelitis, or Zellweger syndrome); congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder; cognitive enhancement, intelligence enhancement, creativity enhancement, memory improvement, learning enhancement and improvement, spiritual enhancement, "mind expansion," IQ improvement, EQ improvement, balance enhancement, athleticism, motor skill enhancement, special navigation, clairvoyance, psychic enhancement, or general improvement of mental health.

(7) Another embodiment described herein is a method of treating or preventing serotonin (5-

5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof, the method comprising administering to the subject a therapeutically effective amount of a composition comprising one or more tryptamines or in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or extracts or isolates from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomer thereof, or combinations thereof, extracts or isolates from *Hericium* mushroom species, combinations thereof and one or more pharmaceutically acceptable excipients. In one aspect, the composition further comprises one or more adverse compounds comprising niacin, ipecac, apomorphine, bittering agents (e.g., denatonium benzoate), capsaicin, capsaicin dihydrocapsaicin, nordihydrocapsaicin, homocapsaicin, homodihydrocapsaicin, capsaicinoids, gingerol, piperine, isopiperine, zingerone, shogaol, vanillylamide derivatives, or combinations thereof.

(8) Another embodiment described herein is a method of treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof, the method comprising administering to the subject a therapeutically effective amount of a composition comprising one or more tryptamines or in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, tautomers thereof or combinations thereof, or extracts or isolates from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomer thereof, or combinations thereof, extracts or isolates from *Hericium* mushroom species, combinations thereof; one or more cannabinoids in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, tautomers thereof, or combinations thereof, or extracts or isolates from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*; and one or more pharmaceutically acceptable excipients.

(9) Another embodiment described herein is a method of treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof, the method comprising administering to the subject a therapeutically effective amount of a composition comprising norpsilocin, norbaeocystin, baeocystin, or psilocybin, combined with one or more erinacines or hericenones in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomer thereof, or combinations thereof, extracts or isolates from *Hericium* mushroom species, combinations thereof and one or more pharmaceutically acceptable excipients.

(10) Another embodiment described herein is the use of a pharmaceutical composition comprising one or more tryptamines, erinacines, hericenones, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients, in the manufacture of a medicament for treatment of serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health.

(11) Another embodiment described herein is the use of a pharmaceutical composition comprising an effective amount of one or more tryptamines or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients, in the manufacture of a medicament for treating or preventing

serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health.

(12) Another embodiment described herein is the use of a pharmaceutical composition comprising an effective amount of one or more tryptamines, erinacines, hericenones, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients in the manufacture of a medicament for treating serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(13) Another embodiment described herein is the use of a pharmaceutical composition comprising an effective amount of one or more tryptamines, erinacines, hericenones, cannabinoids, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients for treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(14) Another embodiment described herein is a means for treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof in in a subject in need thereof comprising administering a composition comprising an effective amount of one or more tryptamines, erinacines, hericenones, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients to the subject.

(15) Another embodiment described herein is a means for treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof in in a subject in need thereof comprising administering a composition comprising an effective amount of one or more tryptamines, erinacines, hericenones, cannabinoids, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients to the subject.

(16) Another embodiment described herein is a method for inducing neurite growth and neurite lengthening comprising administering an effective an effective amount of one or more tryptamines or in pure form or extracts or isolates from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form, extracts or isolates from *Hericum* mushroom species, or combinations thereof and one or more pharmaceutically acceptable excipients to the subject.

(17) Another embodiment described herein is a method for inducing neurite growth and neurite lengthening comprising administering an effective an effective amount of one or more or norpsilocin, norbaeocystin, baeocystin, or psilocybin combined with one or more erinacines or hericenones in pure form, extracts or isolates from *Hericum* mushroom species, or combinations thereof and one or more pharmaceutically acceptable excipients to the subject.

(18) Another embodiment described herein is a process for producing a composition comprising norpsilocin in pure form or extracts or isolates from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form, extracts or isolates from

Hericium mushroom species, or combinations thereof, comprising: growing a mushroom on a substrate; separating mushroom mycelium from a fruitbody and the substrate; extracting the mushroom mycelium in a solvent, forming a solution; and lyophilizing the extract. In one aspect, the substrate comprises one or more of rice, oat, straw, or sawdust. In another aspect, the solvent is ethanol.

(19) Another embodiment described herein is a composition comprising one or more tryptamines or in pure form or extracts or isolates from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form, extracts or isolates from *Hericium* mushroom species, or combinations thereof. In one aspect, the tryptamine comprises, one or more of psilocybin, baeocystin, norbaeocystin, psilocin, norpsilocin, aeruginascin, 4-hydroxytryptamine, N,N-dimethyltryptamine, or N-methyltryptamine; other tryptamines, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. In another aspect, the erinacines or hericenones comprise Erinacine A, Erinacine B, Erinacine C, Erinacine D, Erinacine E, Erinacine F, Erinacine G, Erinacine H, Erinacine I, Erinacine J, Erinacine K, Erinacine P, Erinacine Q, Erinacine R, Erinacol, other Erinacines Hericenone A, Hericenone B, Hericenone C, Hericenone D, Hericenone E, Hericenone F, Hericenone G, Hericenone H, other hericenones, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. In another aspect, the composition further comprises one or more cannabinoids in pure form or extracts or isolates from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*. In another aspect, the cannabinoids comprise one or more of Δ^8 -tetrahydrocannabinol (THC), Δ^9 -tetrahydrocannabinol, tetrahydrocannabinolic acid (THCA), cannabidiol (CBD), cannabidiolic acid (CBDA), cannabinol (CBN), cannabigerol (CBG), cannabichromene (CBC), cannabicyclol (CBL), cannabivarin (CBV), tetrahydrocannabivarin (THCV), cannabidivarin (CBDV), cannabichromevarin (CBCV), cannabigerovarin (CBGV), cannabigerol monomethyl ether (CBGM), cannabielsoin (CBE), cannabicitran (CBT), among others, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. In another aspect, the composition further comprises one or more phenethylamines or amphetamines in pure form or extracts or isolates from plants comprising thereof. In another aspect, the phenethylamines or amphetamines comprises 3,4,5-trimethoxyphenethylamine (Mescaline), 2,5-dimethoxy-4-methylamphetamine (DOM), 2,5-dimethoxy-4-bromophenethylamine (2C-B), 2,5-dimethoxy-4-ethylphenethylamine (2C-E), 2,5-dimethoxy-4-ethylthiophenethylamine (2C-T-2), 2,5-dimethoxy-4-propylthiophenethylamine (2C-T-7), p-methoxy-amphetamine (PMA), 2,4-dimethoxy-amphetamine (2,4-DMA), 3,4-dimethoxy-amphetamine e (3,4-DMA), 3,4-methylenedioxy-amphetamine (MDA), 3-methoxy-4,5-methylenedioxy-amphetamine (MMDA), 2-methoxy-3,4-methylenedioxyamphetamine (MMDA-3a), 2-methoxy-4,5-methylenedioxyamphetamine (MMDA-2), 3,4,5-trimethoxyamphetamine (TMA), 2,4,5-trimethoxyamphetamine (TMA-2), 2,5-dimethoxy-3,4-methylenedioxyamphetamine (DMMDA), 2,3-dimethoxy-4,5-methylenedioxyamphetamine (DMMDA-2), 2,3,4,5-tetramethoxyamphetamine (TeMA), inter alia, pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. In another aspect, the composition further comprises one or more adverse compounds comprising niacin, ipecac, apomorphine, bittering agents (e.g., denatonium benzoate), capsaicin, capsaicin dihydrocapsaicin, nordihydrocapsaicin, homocapsaicin, homodihydrocapsaicin, capsaicinoids, gingerol, piperine, isopiperine, zingerone, shogaol, vanillylamide derivatives, or combinations thereof. In another aspect, the composition comprises 0.001 mg to 0.01 mg, 0.01 mg to 0.1 mg, 0.01 mg to 1 mg, 0.1 mg to 5 mg, 0.1 mg to 1 mg, 0.5 mg to 1 mg, 0.5 mg to 5 mg, 0.25 mg to 1 mg, 0.2 mg to 2 mg, or 0.2 mg to 5 mg of one or more tryptamines or an amount of a plant or mushroom extract or plant or mushroom to provide an equivalent dose. In another aspect, the composition comprises 1 μ g to 5 μ g, 1 μ g to 10 μ g, 5 μ g to 10 μ g, 10 μ g to 5 mg, 10 μ g to 100 μ g, 100 μ g to 1 mg, 500 μ g to 1 mg, 500 μ g to 5 mg, 1 mg to 5 mg, 100 μ g to 1 mg, 100 μ g to 500 μ g, 100 μ g to 250 μ g; 250 μ g to 1 mg; 750 μ g to 1 mg, or 250 μ g to 750 μ g of one or more erinacines or hericenones or an amount of a plant or mushroom extract or plant or mushroom to provide an equivalent dose. In another aspect, the composition comprises 0.01 mg to 0.1 mg, 0.01 mg to 1 mg, 0.1 mg to 10 mg, 0.1 mg to 1 mg, 0.5 mg to 1 mg, 0.5 mg to 5 mg, 0.25 mg to 1 mg, 0.2 mg to 2 mg, 0.2 mg to 5 mg, or 1 mg to 10 mg of one or more cannabinoids or an amount of a plant extract or plant or mushroom to provide an equivalent dose. In another aspect, the composition comprises 0.1 mg to 1 mg, 1 mg to 10 mg, 10 mg

to 100 mg, 10 mg to 50 mg, 50 mg to 100 mg, 20 mg to 80 mg, 20 mg to 50 mg, 50 mg to 100 mg, 50 mg to 80 mg, or 10 mg to 80 mg of one or more phenethylamines or amphetamines or an amount of a plant or mushroom extract or plant or mushroom to provide an equivalent dose. In another aspect, the composition comprises 0.1 mg to 10 mg, 1 mg to 500 mg, 1 mg to 100 mg, 200 mg to 500 mg, 50 mg to 200 mg, 10 mg to 50 mg, 50 mg to 200 mg, 1 mg to 200 mg, or 1 mg to 50 mg of one or more adjuvants. In another aspect, the composition comprises one or more pharmaceutically acceptable excipients. In another aspect, the composition is a powder admixture, liquid, suspension, or emulsion. In another aspect, the composition further comprises one or more extracts or pure chemicals from other fungi comprising one or more of *Antrodia*, *Beauveria*, *Copelandia*, *Cordyceps*, *Fomitopsis*, *Ganoderma*, *Grifola*, *Hericium*, *Hypsizygus*, *Inonotus*, *Isaria*, *Panaeolus*, *Phellinus*, *Piptoporus*, *Pleurotus*, *Polyporus* or *Trametes* species or combinations thereof; a mycelium extract of *Antrodia*, *Beauveria*, *Copelandia*, *Cordyceps*, *Fomitopsis*, *Ganoderma*, *Grifola*, *Hericium*, *Hypsizygus*, *Inonotus*, *Isaria*, *Panaeolus*, *Phellinus*, *Piptoporus*, *Pleurotus*, *Polyporus* or *Trametes* species or combinations thereof; or a fruitbody extract of *Antrodia*, *Beauveria*, *Copelandia*, *Cordyceps*, *Fomitopsis*, *Ganoderma*, *Grifola*, *Hericium*, *Hypsizygus*, *Inonotus*, *Isaria*, *Panaeolus*, *Phellinus*, *Piptoporus*, *Pleurotus*, *Polyporus* or *Trametes* species or combinations thereof. In another aspect, the composition further comprises one or more extracts or pure chemicals from plant species comprising one or more of *Bacopa* species (*Bacopa monnien*), Gotu kola (*Centella asiatica*), and Ginkgo (*Ginkgo biloba*), Ginger (*Zingiber officinale*), Holy Basil (*Ocimum sanctum*), Hu Zhang (*Polygonum cuspidatum*), Oregano (*Origanum vulgare*, *Origanum onites*), Rosemary (*Rosmarinus officinalis*, *Rosmarinus eriocalyx*, species in the genus *Rosmarinus*), Turmeric (*Curcuma longa*), Green Tea (*Camellia sinensis*), lavender (*Lavandula spica* and related species in the genus *Lavandula*), skullcap (*Scutellaria lateriflora*) oat straw (*Avena sativa*, *Avena byzantina*), *Salvia divinorum*, aka Diviner's Sage, *Banisteriopsis caapi* and *Psychotria* species, plants containing ibogaine (*Tabernaemontana iboga*, *Voacanga africana* and *Tabernaemontana undulata*), peyote (*Lophophora williamsii*), the seeds of morning glory (*Ipomoea tricolor* and related species) and Hawaiian baby wood rose (*Argyrea nervosa*), *Acacia confusa*, *Acacia obtusifolia*, *Acacia simplicifolia*, *Desmanthus Illinoensis*, or *Cannabis* (*Cannabis sativa*, *C. indica* and *C. ruderalis*), or combinations thereof. In another aspect, the composition is effective to treat, alleviate, prevent or ameliorate serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, psychiatric and mood disorders, e.g., depression, anxiety, major depressive disorder, treatment resistant depression, persistent depression, manic depression or bipolar disorder, depressive psychosis, perinatal depression, premenstrual dysphoric disorder, seasonal depressions, situational depression, panic disorder, obsessive compulsive disorder, post-traumatic stress disorder, attention deficit/hyperactivity disorder, sleep disorders, eating disorders, schizophrenia, personality disorders, substance abuse disorders (drug abuse, addiction, alcoholism); neuronal injuries or physical neurodegeneration (e.g., physical injury, head trauma, spinal cord trauma, concussion, peripheral neuron trauma, paralysis, ischemia, hypoxia, stroke; organophosphates, lead, heavy metals, nerve agents, other toxic compounds, prions, amyloid plaque, neurotoxic viruses, stress); neurodegenerative diseases (e.g., Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, multiple sclerosis, frontotemporal dementia, Huntington's disease, adrenal leukodystrophy, Alexander's disease, Alper's disease, Alzheimer's disease, amyotrophic lateral sclerosis, Baló concentric sclerosis, Canavan disease, Charcot-Marie-Tooth disease, childhood ataxia with central nervous system hypomyelination, chronic idiopathic peripheral neuropathy, frontotemporal dementia, Huntington's disease, Krabbe disease, monomelic amyotrophy, multiple sclerosis (MS), neurodegeneration, neuromyelitis optica, neuropathic pain, neurosarcoidosis, Parkinson's disease, Pelizaeus-Merzbacher disease, primary lateral sclerosis, progressive supranuclear palsy, radicular pain, radiculopathic pain, Schilder's disease, sciatic pain, sciatica, subacute necrotizing myelopathy, transverse myelitis, or Zellweger syndrome); congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder; cognitive enhancement, intelligence enhancement, creativity enhancement, memory improvement, learning enhancement and improvement, spiritual enhancement, "mind expansion," IQ improvement, EQ improvement, balance enhancement, athleticism, motor skill enhancement, special navigation, clairvoyance, psychic enhancement, or general improvement of mental health. In another aspect, the composition comprises norpsilocin and an extract of extracts or isolates from *Hericium*

erinaceus. In another aspect, the composition comprises baeocystin and an extract of extracts or isolates from *Hericium erinaceus*. In another aspect, the composition comprises norbaeocystin and an extract of extracts or isolates from *Hericium erinaceus*.

(20) Another embodiment described herein is a method of treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof, the method comprising administering to the subject a therapeutically effective amount of a composition comprising one or more tryptamines or in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or extracts or isolates from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomer thereof, or combinations thereof, extracts or isolates from *Hericium* mushroom species, combinations thereof and one or more pharmaceutically acceptable excipients. In one aspect, the composition further comprises one or more adverse compounds comprising niacin, ipecac, apomorphine, bittering agents (e.g., denatonium benzoate), capsaicin, capsaicin dihydrocapsaicin, nordihydrocapsaicin, homocapsaicin, homodihydrocapsaicin, capsaicinoids, gingerol, piperine, isopiperine, zingerone, shogaol, vanillylamide derivatives, or combinations thereof.

(21) Another embodiment described herein is a method of treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof, the method comprising administering to the subject a therapeutically effective amount of a composition comprising one or more tryptamines or in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, tautomers thereof or combinations thereof, or extracts or isolates from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomer thereof, or combinations thereof, extracts or isolates from *Hericium* mushroom species, combinations thereof; one or more cannabinoids in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, tautomers thereof, or combinations thereof, or extracts or isolates from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*; and one or more pharmaceutically acceptable excipients.

(22) Another embodiment described herein is a method of treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof, the method comprising administering to the subject a therapeutically effective amount of a composition comprising norpsilocin, norbaeocystin, baeocystin, or psilocybin, combined with one or more erinacines or hericenones in pure form or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomer thereof, or combinations thereof, extracts or isolates from *Hericium* mushroom species, combinations thereof and one or more pharmaceutically acceptable excipients.

(23) Another embodiment described herein is the use of a pharmaceutical composition comprising one or more tryptamines, erinacines, hericenones, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients, in the manufacture of a medicament for treatment of serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health.

(24) Another embodiment described herein is the use of a pharmaceutical composition comprising an effective amount of one or more tryptamines or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients, in the manufacture of a medicament for treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health.

(25) Another embodiment described herein is the use of a pharmaceutical composition comprising an effective amount of one or more tryptamines, erinacines, hericenones, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients in the manufacture of a medicament for treating serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(26) Another embodiment described herein is the use of a pharmaceutical composition comprising an effective amount of one or more tryptamines, erinacines, hericenones, cannabinoids, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients for treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(27) Another embodiment described herein is a means for treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof in a subject in need thereof comprising administering a composition comprising an effective amount of one or more tryptamines, erinacines, hericenones, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients to the subject.

(28) Another embodiment described herein is a means for treating or preventing serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof in a subject in need thereof comprising administering a composition comprising an effective amount of one or more tryptamines, erinacines, hericenones, cannabinoids, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof, or combinations thereof and one or more pharmaceutically acceptable excipients to the subject.

(29) Another embodiment described herein is a method for inducing neuronal growth and neuronal lengthening comprising administering an effective an effective amount of one or more tryptamines or in pure form or extracts or isolates from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form, extracts or isolates from *Hericum* mushroom species, or combinations thereof and one or more pharmaceutically acceptable excipients to the subject.

(30) Another embodiment described herein is a method for inducing neuronal growth and neuronal lengthening comprising administering an effective an effective amount of one or more or norpsilocin, norbaeocystin, baeocystin, or psilocybin combined with one or more erinacines or hericenones in pure

form, extracts or isolates from *Hericium* mushroom species, or combinations thereof and one or more pharmaceutically acceptable excipients to the subject.

Description

BRIEF DESCRIPTION OF THE DRAWINGS

- (1) FIG. 1 shows the effect of four concentrations of the tryptamines baeocystin, norbaeocystin, and norpsilocin on neurite growth relative to the vehicle control. The norpsilocin 3 and 10 $\mu\text{g/mL}$ experiments are not shown. Data is shown in Table 6.
- (2) FIG. 2 shows the effect of selected concentrations of *H. erinaceus* extract on neurite growth relative to the vehicle control. Data is shown in Table 7.
- (3) FIG. 3 shows the effect of norbaeocystin and *H. erinaceus* extract on neurite growth relative to the vehicle control. Data is shown in Table 8.
- (4) FIG. 4 shows the effect of norpsilocin and *H. erinaceus* extract on neurite growth relative to the vehicle control. Data is shown in Table 9.
- (5) FIG. 5 shows the effect of baeocystin and *H. erinaceus* extract on neurite growth relative to the vehicle control. Data is shown in Table 10.
- (6) FIG. 6 shows the plate layout for Neurite Outgrowth 5.
- (7) FIG. 7 shows the impact of *Hericium erinaceus* extracts and psilocybin analogs on neurite length at day 5.
- (8) FIG. 8 shows the impact of *Hericium erinaceus* extracts and psilocybin analogs on neurite length at day 7.
- (9) FIG. 9 shows the impact of *Hericium erinaceus* extracts and psilocybin analogs on neurite length at day 11.
- (10) FIG. 10 shows neurite outgrowth induced by HE extracts (Day 7).
- (11) FIG. 11 shows a summary of hits from in-house testing of neurite outgrowth of PC12 cells treated with conditioned media from 1321N1 cells ($n=3$).
- (12) FIG. 12 shows the ability of FP *H. erinaceus* extracts to bind to MAP kinases that influence neural health.
- (13) FIG. 13 shows the ability of FP *H. erinaceus* extracts to increase interleukin-6 (IL-6) production in peripheral blood mononuclear cells (PBMCs).
- (14) FIG. 14 shows that FP *H. erinaceus* extracts demonstrate radical scavenging activity in the DPPH assay, indicating they have antioxidant activity.
- (15) FIG. 15 shows SM1-91-C, suspended in MeOH, filtered through a polypropylene 0.22 μM filter (in-house) and suspended in DMEM, filtered through a cellulose acetate 0.22 μM Filter (Neurofit preparation; outsourced). Solubilizing and sterilizing the sample in this manner eliminates a lot of the complexity in the ethyl acetate fraction, including the putative erinacine peaks.
- (16) FIG. 16 shows induction of NGF protein induced by norbaeocystin in human 1321N1 cells ($n=3$; $p<0.05$).
- (17) FIG. 17 shows Depression Anxiety and Stress Scale (DASS 21)—Range 0-42. $F(1,217)=12.44$, $p<0.001$, $\eta^2=0.05$, $F(1,217)=3.99$, $p<0.05$, $\eta^2=0.02$.
- (18) FIG. 18 shows Positive and Negative Affect Scale (PANAS)—Range 10-50. $F(1,223)=35.12$, $p<0.00001$, $\eta^2=0.13$, $F(1,223)=13.90$, $p<0.001$, $\eta^2=0.06$.
- (19) FIG. 19 shows that there are no differences in stacking versus psilocybin alone at 4 weeks—All $F(1,141)<1$, $p>0.5$.

DETAILED DESCRIPTION

- (20) Described herein are neurotrophic and nootropic compositions and methods for treating subjects with such compositions.
- (21) As used herein, the term “tryptamine” refers to any compound related to or derived from the monoamine alkaloid 2-(1H-Indol-3-yl) ethanamine (tryptamine), a non-selective 5-HT_{2A} agonist and serotonin-norepinephrine-dopamine releasing agent (SNDRA). The tryptamine may be a natural product extracted from or isolated from a natural source, such as a Psilocybe mushroom, or synthesized

synthetically. Exemplary tryptamines include psilocybin, baeocystin, norbaeocystin, psilocin, norpsilocin, 4-hydroxytryptamine, N,N-dimethyltryptamine, 5-hydroxytryptamine (serotonin), tryptamine, N-methyltryptamine, N-methyltryptamine, inter alia, pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. Tryptamines such as psilocybin, psilocin, and baeocystin when in mushrooms from nature are known to decay over time, especially quickly in suboptimal storage conditions. Repke et al., *J. Pharmac. Sci.* 66 (1): 113-114 (1977). In another study, psilocybin content of *P. cubensis* ranged from 0.102% to 0.706%, while psilocin content ranged from 0.415% to 0.836% of dried mushroom tissue. Gambaro et al., *J. Pharmac. Biomed. Anal.* 125:427-432 (2016). This variability is consistent with trends previously observed, where psilocybin content of mushroom tissue appeared to increase with subsequent flushes. Bigwood and Beug, *J. Ethnopharmacology* 5 (3): 287-291 (1982); Beug and Bigwood, *J. Ethnopharmacology* 5 (3): 271-285 (1982). The growing substrate can affect the tryptamine concentration as well. Gartz found that growing *Psilocybe cubensis* on a cow dung-rice growing substrate increased psilocin content in *Psilocybe cubensis* from 0.09% to 3.3% of the dried mushroom weight. See Gartz, *Planta Med.* 55 (3): 249-250 (1989). Also, different parts of a mushroom can have different quantities of these compounds. For example, one study found that psilocybin is highest in the caps of *Panaeolus subalteatus* as compared to the rest of the fruiting body. See Gartz, *Biochemie und Physiologie der Pflanzen.* 184 (1-2): 171-178 (1989). In addition to psilocybin and psilocin, several other tryptamine alkaloid compounds can also be present in varying concentrations in mushrooms found in nature. Generally, these compounds are part of the same biosynthetic pathway that yields psilocybin and can be distinguished from one another based on the presence or absence of one or more methyl or phosphate groups. This unique class of biochemicals is referred to as psilocybin analogs. Few reports of baeocystin consumption exist. In a 1997 book, Jochen Gartz reported that baeocystin was roughly akin to psilocybin in terms of its potency and psychotropic effects. The same author had previously published an anecdotal experience where he experienced a “gentle hallucinogenic experience” after consuming 4 mg of baeocystin. See Gartz, *Ann Mus civ Rovereto* 7:265-74 (1991). Additional case studies of oral consumption of 10 mg and 20 mg baeocystin did not produce any hallucinogenic effects. Even less is understood about norpsilocin, baeocystin's dephosphorylated derivative, which was only recently identified. Lenz et al., *J. Nat. Prod.* 80 (10): 2835-2838 (2017).

(22) As used herein, the terms “phenethylamine” and “amphetamine” refers to any compound related to or derived from the monoamine alkaloids, which acts as a central nervous system stimulant. The phenethylamines and amphetamines may be natural products extracted from or isolated from natural sources or synthetically synthesized. Exemplary phenethylamines and amphetamines include 3,4,5-trimethoxyphenethylamine (Mescaline), 2,5-dimethoxy-4-methylamphetamine (DOM), 2,5-dimethoxy-4-bromophenethylamine (2C-B), 2,5-dimethoxy-4-ethylphenethylamine (2C-E), 2,5-dimethoxy-4-ethylthiophenethylamine (2C-T-2), 2,5-dimethoxy-4-propylthiophenethylamine (2C-T-7), p-methoxy-amphetamine (PMA), 2,4-dimethoxy-amphetamine (2,4-DMA), 3,4-dimethoxy-amphetamine (3,4-DMA), 3,4-methylenedioxy-amphetamine (MDA), 3-methoxy-4,5-methylenedioxy-amphetamine (MMDA), 2-methoxy-3,4-methylenedioxyamphetamine (MMDA-3a), 2-methoxy-4,5-methylenedioxyamphetamine (MMDA-2), 3,4,5-trimethoxyamphetamine (TMA), 2,4,5-trimethoxyamphetamine (TMA-2), 2,5-dimethoxy-3,4-methylenedioxyamphetamine (DMMDA), 2,3-dimethoxy-4,5-methylenedioxyamphetamine (DMMDA-2), 2,3,4,5-tetramethoxyamphetamine (TeMA), (R)-2,5-dimethoxy-4-iodoamphetamine, inter alia, pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof.

(23) As used herein, the terms “erinacines” and “hericenones” refer to the cyathin diterpenoids erinacine, hericenone, and related compounds. The compounds may be synthetic or natural products isolated from or extracted from *H. erinaceus*, *H. coralloides*, *H. ramosum*. Exemplary compounds include Erinacine A, Erinacine B, Erinacine C, Erinacine D, Erinacine E, Erinacine F, Erinacine G, Erinacine H, Erinacine I, Erinacine J, Erinacine K, Erinacine P, Erinacine Q, Erinacine R, Erinacol, other Erinacines Hericenone A, Hericenone B, Hericenone C, Hericenone D, Hericenone E, Hericenone F, Hericenone G, Hericenone H, other hericenones, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof. In contrast to psilocybin mushrooms which

primarily grow on the ground in meadows and woods of the subtropics and tropics, usually in soils rich in humus and plant debris, *Hericium erinaceus* (Lion's Mane mushrooms) grow on the bark of trees in temperate forests of the Northern United States and Canada, where they are able to withstand cold temperatures and frost. Further, psilocybin mushrooms are terrestrial, whereas Lion's Mane mushrooms are non-terrestrial (i.e., they grow on trees). Therefore, Lion's Mane mushrooms and psilocybin mushrooms live in different habitats and neither is found cohabitating or combined in nature.

(24) As used herein, the term “cannabinoids” refer to the phytocannabinoids from *Cannabis*. The compounds may be synthetic or natural products isolated from or extracted from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*. Exemplary compounds include Δ^8 -tetrahydrocannabinol, Δ^9 -tetrahydrocannabinol (THC), tetrahydrocannabinolic acid (THCA), cannabidiol (CBD), cannabidiolic acid (CBDA), cannabinol (CBN), cannabigerol (CBG), cannabichromene (CBC), cannabicyclol (CBL), cannabivarin (CBV), tetrahydrocannabivarin (THCV), cannabidivarin (CBDV), cannabichromevarin (CBCV), cannabigerovarin (CBGV), cannabigerol monomethyl ether (CBGM), cannabielsoin (CBE), cannabicitran (CBT), among others, or pharmaceutically acceptable salts, hydrates, solvates, prodrugs, stereoisomers, or tautomers thereof.

(25) The term “a therapeutically effective amount” of a compound described herein refers to an amount of the compound described herein that will elicit the biological or medical response of a subject, for example, reduction or inhibition of an enzyme or a protein activity, or ameliorate symptoms, alleviate conditions, slow or delay disease progression, or prevent a disease, etc. In one embodiment, the term “a therapeutically effective amount” refers to the amount of the compound described herein that, when administered to a subject, is effective to at least partially alleviate, prevent and/or ameliorate a condition, or a disorder or serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health. In one embodiment, the term “a therapeutically effective amount” refers to the amount of the compound described herein that, when administered to a cell, or a tissue, or a non-cellular biological material, or a medium, is effective to treat or ameliorate serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health.

(26) As used herein, the term “subject” refers to an animal. Typically, the animal is a mammal. A subject also refers to, for example, primates (e.g., humans, male or female; infant, adolescent, or adult), cows, sheep, goats, horses, dogs, cats, rabbits, rats, mice, fish, birds, and the like. In an embodiment, the subject is a primate. In one embodiment, the subject is a human.

(27) As used herein, the terms “inhibit,” “inhibition,” or “inhibiting” refer to the reduction or suppression of a given condition, symptom, or disorder, or disease, or a significant decrease in the baseline activity of a biological activity or process.

(28) As used herein, the terms “treat,” “treating,” or “treatment” of any disease or disorder refer In an embodiment, to ameliorating the disease or disorder (i.e., slowing or arresting or reducing the development of the disease or at least one of the clinical symptoms thereof). In an embodiment, “treat,” “treating,” or “treatment” refers to alleviating or ameliorating at least one physical or mental parameter including those which may not be discernible by the subject.

(29) As used herein, the term “preventing” refers to a reduction in the frequency of, or delay in the onset of, symptoms of the condition or disease.

(30) As used herein, a subject is “in need of” a treatment if such subject would benefit biologically, medically, or in quality of life from such treatment.

(31) As used herein, “serotonin (5-hydroxytryptamine, 5-HT) receptor disorders” refers to any disorder or disease that affects serotonin receptors including neuronal injuries, organic abnormalities, depression, mood disorders, and the like. Serotonin receptors modulate the release of neurotransmitters such as glutamate, GABA, dopamine, epinephrine, norepinephrine, and acetylcholine, and hormones, including oxytocin, prolactin, vasopressin, cortisol, corticotropin, substance P, inter alia. Specifically, 5-

HT.sub.2A/C receptors influence various biological and neurological processes such as addiction, anxiety, appetite, locomotion, cognition, imagination, learning, memory, mood, perception, sexual behavior, sleep, thermoregulation, and vasoconstriction. In addition, 5-HT.sub.2C is a heteroreceptor for norepinephrine and dopamine.

(32) As used herein, “mental health” refers to a subject's emotional, psychological, and social well-being. Mental health disorders or problems refer to disorders affecting cognition, mood, behavior, and homeostasis. Mental health disorders may be caused by biological factors (genetic or neurochemistry), stress, trauma, or abuse, or associated with injury.

(33) The term “alkyl” refers to a radical of a straight chain or branched saturated hydrocarbon group having from 1 to 6 carbon atoms (“C.sub.1-6 alkyl”). In some embodiments, an alkyl group has 1 to 5 carbon atoms (“C.sub.1-5 alkyl”). In some embodiments, an alkyl group has 1 to 4 carbon atoms (“C.sub.1-4 alkyl”). In some embodiments, an alkyl group has 1 to 3 carbon atoms (“C.sub.1-3 alkyl”). In some embodiments, an alkyl group has 1 to 2 carbon atoms (“C.sub.1-2 alkyl”). In some embodiments, an alkyl group has 1 carbon atom (“C.sub.1 alkyl”). In some embodiments, an alkyl group has 2 to 6 carbon atoms (“C.sub.2-6 alkyl”). Examples of C.sub.1-6 alkyl groups include methyl (C.sub.1), ethyl (C.sub.2), propyl (C.sub.3) (e.g., n-propyl, isopropyl), butyl (C.sub.4) (e.g., n-butyl, tert-butyl, sec-butyl, isobutyl), pentyl (C.sub.5) (e.g., n-pentyl, 3-pentanyl, amyl, neopentyl, 3-methyl-2-butanyl, tertiary amyl), and hexyl (C.sub.6) (e.g., n-hexyl).

(34) “Alkylene” refers to a divalent radical of an alkyl group, e.g., —CH.sub.2—, —CH.sub.2CH.sub.2—, and —CH.sub.2CH.sub.2CH.sub.2—.

(35) “Heteroalkyl” refers to an alkyl group, which further includes at least one heteroatom (e.g., 1, 2, 3, or 4 heteroatoms) selected from oxygen, nitrogen, or sulfur within (i.e., inserted between adjacent carbon atoms of) and/or placed at one or more terminal position(s) of the parent chain. In certain embodiments, a heteroalkyl group refers to a saturated group having from 1 to 10 carbon atoms and 1 or more heteroatoms within the parent chain (“heteroC.sub.1-10 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 1 to 9 carbon atoms and 1 or more heteroatoms within the parent chain (“heteroC.sub.1-9 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 1 to 8 carbon atoms and one or more heteroatoms within the parent chain (“heteroC.sub.1-8 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 1 to 7 carbon atoms and one or more heteroatoms within the parent chain (“heteroC.sub.1-7 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 1 to 6 carbon atoms and 1 or more heteroatoms within the parent chain (“heteroC.sub.1-6 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 1 to 5 carbon atoms and 1 or 2 heteroatoms within the parent chain (“heteroC.sub.1-5 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 1 to 4 carbon atoms and 1 or 2 heteroatoms within the parent chain (“heteroC.sub.1-4 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 1 to 3 carbon atoms and 1 heteroatom within the parent chain (“heteroC.sub.1-3 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 1 to 2 carbon atoms and 1 heteroatom within the parent chain (“heteroC.sub.1-2 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 1 carbon atom and 1 heteroatom (“heteroC.sub.1 alkyl”). In some embodiments, a heteroalkyl group is a saturated group having 2 to 6 carbon atoms and 1 or 2 heteroatoms within the parent chain (“heteroC.sub.2-6 alkyl”). Unless otherwise specified, each instance of a heteroalkyl group is independently unsubstituted (an “unsubstituted heteroalkyl”) or substituted (a “substituted heteroalkyl”) with one or more substituents. In certain embodiments, the heteroalkyl group is an unsubstituted heteroC.sub.1-10 alkyl. In certain embodiments, the heteroalkyl group is a substituted heteroC.sub.1-10 alkyl.

(36) “Heteroalkylene” refers to a divalent radical of a heteroalkyl group.

(37) “Alkoxy” or “alkoxyl” refers to an —O-alkyl radical. In some embodiments, the alkoxy groups are methoxy, ethoxy, n-propoxy, isopropoxy, n-butoxy, tert-butoxy, sec-butoxy, n-pentoxy, n-hexoxy, and 1,2-dimethylbutoxy. In some embodiments, alkoxy groups are lower alkoxy, i.e., with between 1 and 6 carbon atoms. In some embodiments, alkoxy groups have between 1 and 4 carbon atoms.

(38) As used herein, the term “aryl” refers to a stable, aromatic, mono- or bicyclic ring radical having the specified number of ring carbon atoms. Examples of aryl groups include, but are not limited to,

phenyl, 1-naphthyl, 2-naphthyl, and the like. The related term “aryl ring” likewise refers to a stable, aromatic, mono- or bicyclic ring having the specified number of ring carbon atoms.

(39) As used herein, the term “heteroaryl” refers to a stable, aromatic, mono- or bicyclic ring radical having the specified number of ring atoms and comprising one or more heteroatoms individually selected from nitrogen, oxygen, and sulfur. The heteroaryl radical may be bonded via a carbon atom or heteroatom. Examples of heteroaryl groups include, but are not limited to, furyl, pyrrolyl, thienyl, pyrazolyl, imidazolyl, thiazolyl, isothiazolyl, oxazolyl, isoxazolyl, triazolyl, tetrazolyl, pyrazinyl, pyridazinyl, pyrimidyl, pyridyl, quinolinyl, isoquinolinyl, indolyl, indazolyl, oxadiazolyl, benzothiazolyl, quinoxalinyl, and the like. The related term “heteroaryl ring” likewise refers to a stable, aromatic, mono- or bicyclic ring having the specified number of ring atoms and comprising one or more heteroatoms individually selected from nitrogen, oxygen, and sulfur.

(40) As used herein, the term “carbocycle” refers to a stable, saturated, or unsaturated, non-aromatic, mono- or bicyclic (fused, bridged, or spiro) ring radical having the specified number of ring carbon atoms. Examples of carbocycle groups include, but are not limited to, the cycloalkyl groups identified above, cyclobutenyl, cyclopentenyl, cyclohexenyl, and the like. In an embodiment, the specified number is C.sub.3-C.sub.12 carbons. The related term “carbocyclic ring” likewise refers to a stable, saturated, or unsaturated, non-aromatic, mono- or bicyclic (fused, bridged, or spiro) ring having the specified number of ring carbon atoms.

(41) As used herein, the term “heterocyclyl” refers to a stable, saturated or unsaturated, non-aromatic, mono- or bicyclic (fused, bridged, or spiro) ring radical having the specified number of ring atoms and comprising one or more heteroatoms individually selected from nitrogen, oxygen and sulfur. The heterocyclyl radical may be bonded via a carbon atom or heteroatom. In an embodiment, the specified number is C.sub.3-C.sub.12 carbons. Examples of heterocyclyl groups include, but are not limited to, azetidiny, oxetanyl, pyrrolinyl, pyrrolidinyl, tetrahydrofuryl, tetrahydrothienyl, piperidyl, piperazinyl, tetrahydropyranyl, morpholinyl, perhydroazepinyl, tetrahydropyridinyl, tetrahydroazepinyl, octahydropyrrolopyrrolyl, and the like. The related term “heterocyclic ring” likewise refers to a stable, saturated or unsaturated, non-aromatic, mono- or bicyclic (fused, bridged, or spiro) ring having the specified number of ring atoms and comprising one or more heteroatoms individually selected from nitrogen, oxygen and sulfur.

(42) As used herein, “spirocycloalkyl” or “spirocycle” means carbogenic bicyclic ring systems with both rings connected through a single atom. The rings can be different in size and nature, or identical in size and nature. Examples include spiropentane, spirohexane, spiroheptane, spirooctane, spirononane, or spirodecane. One or both of the rings in a spirocycle can be fused to another ring carbocyclic, heterocyclic, aromatic, or heteroaromatic ring. For example, a (C.sub.3-C.sub.12)spirocycloalkyl is a spirocycle containing between 3 and 12 carbon atoms.

(43) As used herein, “spiroheterocycloalkyl” or “spiroheterocycle” means a spirocycle wherein at least one of the rings is a heterocycle wherein one or more of the carbon atoms can be substituted with a heteroatom (e.g., one or more of the carbon atoms can be substituted with a heteroatom in at least one of the rings). One or both of the rings in a spiroheterocycle can be fused to another ring carbocyclic, heterocyclic, aromatic, or heteroaromatic ring.

(44) As used herein, “halo” or “halogen” refers to fluorine (fluoro, —F), chlorine (chloro, —Cl), bromine (bromo, —Br), or iodine (iodo, —I).

(45) As used herein, “haloalkyl” means an alkyl group substituted with one or more halogens. Examples of haloalkyl groups include, but are not limited to, trifluoromethyl, difluoromethyl, pentafluoroethyl, and trichloromethyl.

(46) As used herein, “substituted,” whether preceded by the term “optionally” or not, means that one or more hydrogens of the designated moiety are replaced with a suitable substituent.

(47) As used herein, the definition of each expression, e.g., alkyl, m, n, etc., when it occurs more than once in any structure, is intended to be independent of its definition elsewhere in the same structure.

(48) The term “prophylaxis” refers to preventing or reducing the progression of a disorder, either to a statistically significant degree or to a degree detectable to one skilled in the art.

(49) The term “substantially” as used herein means to a great or significant extent, but not completely.

(50) As used herein, all percentages (%) refer to mass (or weight, w/w) percent unless noted otherwise.

(51) The term “about” as used herein refers to any values, including both integers and fractional components that are within a variation of up to $\pm 10\%$ of the value modified by the term “about.”

(52) As used herein, the term “a,” “an,” “the” and similar terms used in the context of the disclosure (especially in the context of the claims) are to be construed to cover both the singular and plural unless otherwise indicated herein or clearly contradicted by the context. In addition, “a,” “an,” or “the” means “one or more” unless otherwise specified.

(53) Terms such as “include,” “including,” “contain,” “containing,” “having,” and the like mean “comprising.”

(54) The term “or” can be conjunctive or disjunctive.

(55) Definitions of specific functional groups and chemical terms are described in more detail herein.

The chemical elements are identified in accordance with the Periodic Table of the Elements, CAS version, *Handbook of Chemistry and Physics*, 75th ed., inside cover, and specific functional groups are generally defined as described therein. Additionally, general principles of organic chemistry, as well as specific functional moieties and reactivity, are described in Thomas Sorrell, *Organic Chemistry*, University Science Books, Sausalito, 1999; Smith and March, *March's Advanced Organic Chemistry*, 5th ed, John Wiley & Sons, Inc., New York, 2001; Larock, *Comprehensive Organic Transformations*, VCH Publishers, Inc., New York, 1989; and Carruthers, *Some Modern Methods of Organic Synthesis*, 3rd ed, Cambridge University Press, Cambridge, 1987.

(56) Certain compounds described herein may exist in particular geometric or stereoisomeric forms. A particular enantiomer of a compound described herein may be prepared by asymmetric synthesis, or by derivation with a chiral auxiliary, where the resulting diastereomeric mixture is separated and the auxiliary group cleaved to provide the pure desired enantiomers. Alternatively, where the molecule contains a basic functional group, such as amino, or an acidic functional group, such as carboxyl, diastereomeric salts are formed with an appropriate optically-active acid or base, followed by resolution of the diastereomers thus formed by fractional crystallization or chromatographic means well known in the art, and subsequent recovery of the pure enantiomers.

(57) Unless otherwise stated, structures depicted herein are also meant to include geometric (or conformational) forms of the structure; for example, the R and S configurations for each asymmetric center, Z and E double bond isomers, and Z and E conformational isomers. Therefore, single stereochemical isomers as well as enantiomeric, diastereomeric, and geometric (or conformational) mixtures of the disclosed compounds are within the scope of the disclosure. Unless otherwise stated, all tautomeric forms of the compounds described herein are within the scope of the disclosure.

Additionally, unless otherwise stated, structures depicted herein are also meant to include compounds that differ only in the presence of one or more isotopically enriched atoms. For example, compounds having the disclosed structures including the replacement of hydrogen by deuterium or tritium, or the replacement of a carbon by a ^{13}C - or ^{14}C -enriched carbon are within the scope of this disclosure. Such compounds are useful, for example, as analytical tools, as probes in biological assays, or as therapeutic agents in accordance with the disclosure.

(58) The “enantiomeric excess” or “% enantiomeric excess” of a composition can be calculated using the equation shown below. In the example shown below a composition contains 90% of one enantiomer, e.g., the S enantiomer, and 10% of the other enantiomer, i.e., the R enantiomer. $ee = (90 - 10) / 100 \times 100 = 80\%$.

(59) Thus, a composition containing 90% of one enantiomer and 10% of the other enantiomer is said to have an enantiomeric excess of 80%. The compounds or compositions described herein may contain an enantiomeric excess of at least 50%, 75%, 90%, 95%, or 99% of one form of the compound, e.g., the S-enantiomer. In other words, such compounds or compositions contain an enantiomeric excess of the S enantiomer over the R enantiomer.

(60) Where a particular enantiomer is preferred, it may, in some embodiments be provided substantially free of the corresponding enantiomer and may also be referred to as “optically enriched.” “Optically enriched,” as used herein, means that the compound is made up of a significantly greater proportion of one enantiomer. In certain embodiments, the compound is made up of at least about 90% by weight of a

preferred enantiomer. In other embodiments, the compound is made up of at least about 95%, 98%, or 99% by weight of a preferred enantiomer. Preferred enantiomers may be isolated from racemic mixtures by any method known to those skilled in the art, including chiral high-pressure liquid chromatography (HPLC) and the formation and crystallization of chiral salts or prepared by asymmetric syntheses. See e.g., Jacques et al., *Enantiomers, Racemates and Resolutions* (Wiley Interscience, New York, 1981); Wilen, et al., *Tetrahedron* 33:2725 (1977); Eliel, E. L. *Stereochemistry of Carbon Compounds* (McGraw Hill, NY, 1962); Wilen, S. H. *Tables of Resolving Agents and Optical Resolutions* p. 268 (E. L. Eliel, Ed., Univ. of Notre Dame Press, Notre Dame, IN 1972).

(61) All methods described herein can be performed in any suitable order unless otherwise indicated herein or otherwise clearly contradicted by context. The use of any and all examples, or exemplary language (e.g., “such as”) provided herein is intended merely to better illuminate the disclosure and does not pose a limitation on the scope of the disclosure otherwise claimed.

(62) Any resulting mixtures of isomers can be separated based on the physicochemical differences of the constituents, into the pure or substantially pure geometric or optical isomers, diastereomers, racemates, for example, by chromatography and/or fractional crystallization.

(63) Any resulting racemates of final products or intermediates can be resolved into the optical antipodes by known methods, e.g., by separation of the diastereomeric salts thereof, obtained with an optically active acid or base, and liberating the optically active acidic or basic compound. In particular, a basic moiety may thus be employed to resolve the compounds described herein into their optical antipodes, e.g., by fractional crystallization of a salt formed with an optically active acid, e.g., tartaric acid, dibenzoyl tartaric acid, diacetyl tartaric acid, di-O,O'-p-toluoyl tartaric acid, mandelic acid, malic acid or camphor-10-sulfonic acid. Racemic products can also be resolved by chiral chromatography, e.g., high pressure liquid chromatography (HPLC) using a chiral adsorbent.

(64) Various exemplary embodiments of the disclosure are described herein. It will be recognized that features specified in each embodiment may be combined, substituted, or replaced with other specified features disclosed elsewhere in the specification to provide further embodiments of the present disclosure. All analogous compounds may be substituted for each other in the same or similar amounts (mass, concentration, or dosages) as indicated for analogous compounds.

(65) It is understood that in the following embodiments, combinations of substituents or variables of the depicted formulae are permissible only if such combinations result in stable compounds.

(66) Pharmaceutically Acceptable Salts

(67) Pharmaceutically acceptable salts of the compounds described herein are also contemplated for the uses described herein. As used herein, the terms “salt” or “salts” refer to an acid addition or base addition salt of a compound described herein. “Salts” include in particular “pharmaceutical acceptable salts.” The term “pharmaceutically acceptable salts” refers to salts that retain the biological effectiveness and properties of the compounds disclosed herein and, which typically are not biologically or otherwise undesirable. In many cases, the compounds disclosed herein can form acid and/or base salts by virtue of the presence of amino and/or carboxyl groups or groups similar thereto.

(68) Pharmaceutically acceptable acid addition salts can be formed with inorganic acids and organic acids.

(69) Inorganic acids from which salts can be derived include, for example, hydrochloric acid, hydrobromic acid, sulfuric acid, nitric acid, phosphoric acid, and the like.

(70) Organic acids from which salts can be derived include, for example, acetic acid, propionic acid, glycolic acid, oxalic acid, maleic acid, malonic acid, succinic acid, fumaric acid, tartaric acid, citric acid, benzoic acid, mandelic acid, methanesulfonic acid, ethanesulfonic acid, toluenesulfonic acid, sulfosalicylic acid, and the like.

(71) Pharmaceutically acceptable base addition salts can be formed with inorganic and organic bases. Inorganic bases from which salts can be derived include, for example, ammonium salts and metals from columns I to XII of the periodic table. In certain embodiments, the salts are derived from sodium, potassium, ammonium, calcium, magnesium, iron, silver, zinc, and copper; particularly suitable salts include ammonium, potassium, sodium, calcium, and magnesium salts. Organic bases from which salts can be derived include, for example, primary, secondary, and tertiary amines, substituted amines

including naturally occurring substituted amines, cyclic amines, basic ion exchange resins, and the like. Certain organic amines include isopropylamine, benzathine, choline, diethanolamine, diethylamine, lysine, meglumine, piperazine, and tromethamine.

(72) Another embodiment is a tryptamine, phenethylamine, amphetamine, erinacine, hericenone, or cannabinoid as an acetate, ascorbate, adipate, aspartate, benzoate, besylate, bromide/hydrobromide, bicarbonate/carbonate, bisulfate/sulfate, camphorsulfonate, caprate, chloride/hydrochloride, chlorotheophyllonate, citrate, ethandisulfonate, fumarate, gluceptate, gluconate, glucuronate, glutamate, glutarate, glycolate, hippurate, hydroiodide/iodide, isethionate, lactate, lactobionate, laurylsulfate, malate, maleate, malonate, mandelate, mesylate, methylsulphate, mucate, naphthoate, napsylate, nicotinate, nitrate, octadecanoate, oleate, oxalate, palmitate, pamoate, phosphate/hydrogen phosphate/dihydrogen phosphate, polygalacturonate, propionate, sebacate, stearate, succinate, sulfosalicylate, sulfate, tartrate, tosylate, trifenate, trifluoroacetate, or xinafoate salt form.

(73) Pharmaceutical Compositions

(74) Another embodiment is a pharmaceutical composition comprising one or more compounds described herein or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, and one or more pharmaceutically acceptable carrier(s). The term "pharmaceutically acceptable carrier" refers to a pharmaceutically acceptable material, composition, or vehicle, such as a liquid or solid filler, diluent, excipient, solvent, or encapsulating material, involved in carrying or transporting any subject composition or component thereof. Each carrier must be "acceptable" in the sense of being compatible with the subject composition and its components and not injurious to the patient. Some examples of materials which may serve as pharmaceutically acceptable carriers include: (1) sugars, such as lactose, glucose and sucrose; (2) starches, such as corn starch and potato starch; (3) cellulose, and its derivatives, such as sodium carboxymethyl cellulose, ethyl cellulose and cellulose acetate; (4) powdered tragacanth; (5) malt; (6) gelatin; (7) talc; (8) excipients, such as cocoa butter and suppository waxes; (9) oils, such as peanut oil, cottonseed oil, safflower oil, sesame oil, olive oil, corn oil and soybean oil; (10) glycols, such as propylene glycol; (11) polyols, such as glycerin, sorbitol, mannitol and polyethylene glycol; (12) esters, such as ethyl oleate and ethyl laurate; (13) agar; (14) buffering agents, such as magnesium hydroxide and aluminum hydroxide; (15) alginic acid; (16) pyrogen-free water; (17) isotonic saline; (18) Ringer's solution; (19) ethyl alcohol; (20) phosphate buffer solutions; and (21) other non-toxic compatible substances employed in pharmaceutical formulations.

(75) The compositions described herein may be administered orally, parenterally, by inhalation spray, topically, rectally, nasally, buccally, vaginally or via an implanted reservoir. The term "parenteral" as used herein includes subcutaneous, intravenous, intramuscular, intra-articular, intra-synovial, intrasternal, intrathecal, intrahepatic, intralesional and intracranial injection or infusion techniques. In some embodiments, the compositions of the disclosure are administered orally, intraperitoneally, or intravenously. Sterile injectable forms of the compositions of this disclosure may be aqueous or oleaginous suspension. These suspensions may be formulated according to techniques known in the art using suitable dispersing or wetting agents and suspending agents. The sterile injectable preparation may also be a sterile injectable solution or suspension in a non-toxic parenterally acceptable diluent or solvent, for example as a solution in 1,3-butanediol. Among the acceptable vehicles and solvents that may be employed are water, Ringer's solution, and isotonic sodium chloride solution. In addition, sterile, fixed oils are conventionally employed as a solvent or suspending medium.

(76) For this purpose, any bland fixed oil may be employed including synthetic mono- or di-glycerides. Fatty acids, such as oleic acid and its glyceride derivatives are useful in the preparation of injectables, as are natural pharmaceutically acceptable oils, such as olive oil or castor oil, especially in their polyoxyethylated versions. These oil solutions or suspensions may also contain a long-chain alcohol diluent or dispersant, such as carboxymethyl cellulose or similar dispersing agents that are commonly used in the formulation of pharmaceutically acceptable dosage forms including emulsions and suspensions. Other commonly used surfactants, such as Tween®, Spans and other emulsifying agents or bioavailability enhancers which are commonly used in the manufacture of pharmaceutically acceptable solid, liquid, or other dosage forms may also be used for the purposes of formulation.

(77) The pharmaceutically acceptable compositions described herein may be orally administered in any

orally acceptable dosage form including, but not limited to, capsules, tablets, aqueous suspensions, or solutions. In the case of tablets for oral use, carriers commonly used include lactose and corn starch. Lubricating agents, such as magnesium stearate, are also typically added. For oral administration in a capsule form, useful diluents include lactose and dried cornstarch. When aqueous suspensions are required for oral use, the active ingredient is combined with emulsifying and suspending agents. If desired, certain sweetening, flavoring, or coloring agents may also be added.

(78) Alternatively, the pharmaceutically acceptable compositions of this disclosure may be administered in the form of suppositories for rectal administration. These can be prepared by mixing the agent with a suitable non-irritating excipient that is solid at room temperature but liquid at rectal temperature and therefore will melt in the rectum to release the drug. Such materials include cocoa butter, beeswax, and polyethylene glycols.

(79) The pharmaceutically acceptable compositions of this disclosure may also be administered topically, especially when the target of treatment includes areas or organs readily accessible by topical application, including diseases of the eye, the skin, or the lower intestinal tract. Suitable topical formulations are readily prepared for each of these areas or organs. Topical application for the lower intestinal tract can be administered using a rectal suppository formulation (see above) or a suitable enema formulation. Topically transdermal patches may also be used.

(80) For topical applications, the pharmaceutically acceptable compositions may be formulated in a suitable ointment containing the active component suspended or dissolved in one or more carriers. Carriers for topical administration of the compounds of this disclosure include, but are not limited to, mineral oil, liquid petrolatum, white petrolatum, propylene glycol, polyoxyethylene, polyoxypropylene compound, emulsifying wax, and water. Alternatively, the pharmaceutically acceptable compositions can be formulated in a suitable lotion or cream containing the active components suspended or dissolved in one or more pharmaceutically acceptable carriers. Suitable carriers include, but are not limited to, mineral oil, sorbitan monostearate, polysorbate 60, cetyl esters wax, cetearyl alcohol, 2-octyldodecanol, benzyl alcohol, and water.

(81) The pharmaceutically acceptable compositions of this disclosure may also be administered by nasal aerosol or inhalation. Such compositions are prepared according to techniques known in the art of pharmaceutical formulation and may be prepared as solutions in saline, employing benzyl alcohol or other suitable preservatives, absorption promoters to enhance bioavailability, fluorocarbons, or other conventional solubilizing or dispersing agents. The amount of the compounds of the present disclosure that may be combined with the carrier materials to produce a composition in a single dosage form will vary depending upon the host treated and the mode of administration. Preferably, the compositions should be formulated so that a dosage of between 0.01-100 mg/kg body weight/day of the inhibitor can be administered to a patient receiving these compositions.

(82) Isotopically Labelled Compounds

(83) A compound described herein or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, is also intended to represent unlabeled forms as well as isotopically labeled forms of the compounds. Isotopically labeled compounds have structures depicted by the formulas given herein except that one or more atoms are replaced by an atom having a selected atomic mass or mass number. Examples of isotopes that can be incorporated into compounds described herein include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorous, fluorine, and chlorine, such as ²H, ³H, ¹¹C, ¹³C, ¹⁴C, ¹⁵N, ¹⁸F, ³¹P, ³²P, ³⁵S, ³⁶Cl, ¹²³I, ¹²⁴I, ¹²⁵I, respectively. The disclosure includes various isotopically labeled compounds as defined herein, for example, those into which radioactive isotopes, such as ³H and ¹⁴C, or those into which non-radioactive isotopes, such as ²H and ¹³C are present. Such isotopically labelled compounds are useful in metabolic studies (with ¹⁴C), reaction kinetic studies (with, for example ²H or ³H), detection or imaging techniques, such as positron emission tomography (PET) or single-photon emission computed tomography (SPECT) including drug or substrate tissue distribution assays, or in radioactive treatment of patients. An ¹⁸F or labeled compound may be particularly desirable for PET or SPECT studies. Isotopically-labeled compounds described herein or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or

tautomer thereof, can generally be prepared by conventional techniques known to those skilled in the art or by processes analogous to those described herein using an appropriate isotopically-labeled reagents in place of the non-labeled reagent previously employed.

(84) Further, substitution with heavier isotopes, particularly deuterium (i.e., ^2H or D) may afford certain therapeutic advantages resulting from greater metabolic stability, for example, increased in vivo half-life or reduced dosage requirements or an improvement in therapeutic index. It is understood that deuterium in this context is regarded as a substituent of a compound described herein or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof. The concentration of such a heavier isotope, specifically deuterium, may be defined by the isotopic enrichment factor. The term "isotopic enrichment factor" as used herein means the ratio between the isotopic abundance and the natural abundance of a specified isotope.

(85) Dosages

(86) Toxicity and therapeutic efficacy of compounds described herein, including pharmaceutically acceptable salts and deuterated variants, can be determined by standard pharmaceutical procedures in cell cultures or experimental animals. The LD 50 is the dose lethal to 50% of the population. The ED₅₀ is the dose therapeutically effective in 50% of the population. The dose ratio between toxic and therapeutic effects (LD₅₀/ED₅₀) is the therapeutic index. Compounds that exhibit large therapeutic indexes are preferred. While compounds that exhibit toxic side effects may be used, care should be taken to design a delivery system that targets such compounds to the site of affected tissue in order to minimize potential damage to uninfected cells and thereby reduce side effects.

(87) Data obtained from the cell culture assays and animal studies can be used in formulating a range of dosage for use in humans. The dosage of such compounds may lie within a range of circulating concentrations that include the ED₅₀ with little or no toxicity. The dosage may vary within this range depending upon the dosage form employed and the route of administration utilized. For any compound, the therapeutically effective dose can be estimated initially from cell culture assays. A dose may be formulated in animal models to achieve a circulating plasma concentration range that includes the IC₅₀ (i.e., the concentration of the test compound that achieves a half-maximal inhibition of symptoms) as determined in cell culture. Such information can be used to more accurately determine useful doses in humans. Levels in plasma may be measured, for example, by high performance liquid chromatography.

(88) It should also be understood that a specific dosage and treatment regimen for any particular patient will depend upon a variety of factors, including the activity of the specific compound employed, the age, body weight, general health, sex, diet, time of administration, rate of excretion, drug combination, and the judgment of the treating physician and the severity of the particular disease being treated. The amount of a compound described herein in the composition will also depend upon the particular compound in the composition.

(89) Methods of Use

(90) Another embodiment is a method of treating or preventing neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof, the method comprising administering to the subject a therapeutically effective amount of a compound disclosed herein, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof.

(91) Another embodiment is a composition comprising a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof, and a pharmaceutically acceptable carrier, for use in treating neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(92) Another embodiment is a composition comprising a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer

thereof, or a combination thereof, and a pharmaceutically acceptable carrier, for use in treating neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(93) Another embodiment is a pharmaceutical composition comprising a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof, and a pharmaceutically acceptable carrier, for use in treating neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(94) Another embodiment is a composition comprising a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof, for use in treating neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof. In another embodiment, the composition is useful for treating or preventing a neurological disorder, a respiratory disorder, a proliferative disorder, an autoimmune disorder, an autoinflammatory disorder, an inflammatory disorder, or an infectious disease or disorder.

(95) Another embodiment is the use of a composition comprising a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof, in the manufacture of a medicament for treatment of neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health.

(96) Another embodiment is the use of a pharmaceutical composition comprising a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof and a pharmaceutically acceptable carrier, in the manufacture of a medicament for treating neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(97) Another embodiment is a use of a pharmaceutical composition comprising a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, a combination thereof in the manufacture of a medicament for treating or preventing neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(98) Another embodiment is a method for treating or preventing neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof comprising administering a composition comprising a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof to the subject.

(99) Another embodiment is a use of a compound comprising a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, in the manufacture of a medicament for treating or preventing neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical

or motor neuron enhancement, or general improvement of mental health.

(100) Another embodiment is the addition of a monamine oxidase inhibitor, such as β -carbolines (e.g., harmine, harmine, nor harmine, perlolyrine, harmol, cordysinin, inter alia), to any of the above mentioned compositions or methods to enhance the pharmaceutical efficacy of the tryptamine(s).

(101) Combination Therapies

(102) Another embodiment is a pharmaceutical combination comprising one or more of a tryptamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, a combination thereof, and one or more additional therapeutic agent(s) for simultaneous, separate or sequential use in therapy for neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health. In one embodiment, the additional therapeutic agent is selected from the group consisting of: an antiproliferative agent, anticancer agent, immunomodulatory agent, an anti-inflammatory agent, a neurological treatment agent, an anti-viral agent, an anti-fungal agent, anti-parasitic agent, an antibiotic, and a general anti-infective agent.

(103) One embodiment described herein is neurotrophic and nootropic compositions and methods for treating subjects with such compositions. In one aspect the composition comprises one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof combined with one or more phenethylamines or amphetamines in pure form or extract from a plant or mushroom, or combinations thereof, one or more erinacines or hericenones in pure form, extracts from *Hericum* mushroom species (e.g., *H. erinaceus*, *H. coralloides*, *H. ramosum*) or combinations thereof, one or more cannabinoids in pure form or extracts from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*, optionally, one or more adverse compounds such as niacin, capsaicin, ipecac, apomorphine, bittering agents (e.g., denatonium benzoate), inter alia, and one or more pharmaceutically acceptable excipients.

(104) In one embodiment, the composition is described in Table 1. Compositions may contain one or more species or combinations of any of the species listed in Table 1.

(105) TABLE-US-00001 TABLE 1 Exemplary neurotropic or nootropic compositions

Component	Example Dosage
Tryptamine neurotropics, Psilocybin, baeocystin, norbaeocystin,	10 ng to 10 mg
tryptamine derivatives, psilocin, norpsilocin, 4-hydroxytryptamine, esters, or salts thereof, or N,N-dimethyltryptamine, N-methyltryptamine, extracts from fungi or inter alia;	In addition or alternatively, 3,4,5- plants;
In addition to or trimethoxyphenethylamine (Mescaline), 2,4- alternatively, dimethoxy-amphetamine (2,4-DMA), 3,4- phenethylamines, dimethoxy-amphetamine (3,4-DMA), 3,4-amphetamines; methylenedioxy-amphetamine (MDA), 3- derivatives thereof, methoxy-4,5-methylenedioxy-amphetamine extracts from fungi or (MMDA), inter alia plants	Optional secondary
Erinacines, hericenones, cannabidiol, 10 ng to 500 mg neurotrophic fungal or cannabichromene, cannabigerol, Δ 8- plant extracts, or purified tetrahydrocannabinol, Δ 9- compounds thereof	tetrahydrocannabinol, cannabinol, tetrahydrocannabivarin, cannabidiol-2',6'- dimethyl ether, Ketamine, inter alia
Optional neurotropic or <i>Antrodia</i> , <i>Beauveria</i> , <i>Copelandia</i> , <i>Cordyceps</i> , 10 μ g to 500 mg nootropic fungal or plant <i>Fomitopsis</i> , <i>Ganoderma</i> , <i>Grifola</i> , <i>Hericum</i> , extracts, or other natural <i>Hypsizygus</i> , <i>Inonotus</i> , <i>Isaria</i> , <i>Panaeolus</i> , products, or purified <i>Phellinus</i> , <i>Phellinus</i> , <i>Piptoporus</i> , <i>Pleurotus</i> , compounds thereof <i>Polyporus</i> , <i>Pochonia chlamydosporia</i> , or <i>Trametes</i> species or combinations thereof;	<i>Bacopa monnien</i> , <i>Centella asiatica</i> , <i>Ginkgo biloba</i> , <i>Zingiber officinale</i> , <i>Ocimum sanctum</i> , <i>Polygonum cuspidatum</i> , <i>Origanum vulgare</i> , <i>Origanum onites</i> , <i>Rosmarinus officinalis</i> , <i>Rosmarinus eriocalyx</i> , <i>Curcuma longa</i> , <i>Camellia sinensis</i> , <i>Psychotria viridis</i> , inter alia
Optional MAO inhibitor β -carbolines (e.g., harmine, harmine, nor 10 ng to 10 mg compounds harmine, perlolyrine, harmol, cordysinin, inter alia)	Optional adverse Niacin, capsaicin, ipecac, apomorphine, 10 μ g to 200 mg bittering agents (e.g., denatonium benzoate) inter alia
Optional pharmaceutical Fillers, binders, diluents, vehicles, lubricants, quantum sufficit excipients preservatives, flavors, colors, etc.	

Compositions may contain one or more species or combinations of any of the species listed above.

Compositions can be liquid, suspensions, emulsions, dry powder admixtures, or combinations thereof.

(106) One embodiment described herein is a composition comprising one or more tryptamines such as

psilocybin (4-phosphoryloxy-N,N-dimethyltryptamine), baeocystin, (4-phosphoryloxy-N-methyltryptamine), norbaeocystin (4-phosphoryloxy-tryptamine), psilocin (4-hydroxy-N,N-dimethyltryptamine, norpsilocin (4-hydroxy-N-methyl-tryptamine), N,N-dimethyltryptamine, 4-hydroxytryptamine, inter alia, in pure form or comprising extracts from Psilocybe and psilocybin containing mushrooms, or combinations thereof.

(107) Another embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof, and further combined with one or more adverse compounds such as niacin, ipecac, apomorphine, bittering agents (e.g., denatonium benzoate), capsaicin, capsaicin dihydrocapsaicin, nordihydrocapsaicin, homocapsaicin, homodihydrocapsaicin, capsaicinoids, gingerol, piperine, isopiperine, zingerone, shogaol, vanillylamide derivatives, or combinations thereof, inter alia.

(108) Another embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form, extracts from *Hericum* mushroom species, or combinations thereof.

(109) Another embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof combined with one or more erinacines or hericenones in pure form, extracts from *Hericum* mushroom species (e.g., *H. erinaceus*, *H. coralloides*, *H. ramosum*) or combinations thereof, and further combined with one or more adverse compounds such as niacin, capsaicin, ipecac, apomorphine, bittering agents (e.g., denatonium benzoate), inter alia.

(110) Another embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof combined with one or more phenethylamines or amphetamines in pure form or extract from a plant or mushroom, or combinations thereof, one or more erinacines or hericenones in pure form, extracts from *Hericum* mushroom species (e.g., *H. erinaceus*, *H. coralloides*, *H. ramosum*) or combinations thereof, and further combined with one or more adverse compounds such as niacin, capsaicin, ipecac, apomorphine, bittering agents (e.g., denatonium benzoate), inter alia.

(111) Another embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof combined with one or more cannabinoids in pure form or extracts from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*.

(112) Another embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof combined with one or more cannabinoids in pure form or extracts from *Cannabis sativa*, *Cannabis sativa*, *Cannabis indica*, or *Cannabis ruderalis*, and further combined with one or more adverse compounds such as niacin, capsaicin, ipecac, apomorphine, bittering agents (e.g., denatonium benzoate), inter alia.

(113) Another embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin mushrooms containing fungi, extracts thereof or pure chemicals thereof; or plant extracts, or pure chemicals thereof; or combinations thereof.

(114) One embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin mushrooms combined with one or more extracts or pure chemicals from other fungi comprising one or more of *Antrodia*, *Beauveria*, *Copelandia*, *Cordyceps*, *Fomitopsis*, *Ganoderma*, *Grifola*, *Hericum*, *Hypsizygus*, *Inonotus*, *Isaria*, *Panaeolus*, *Phellinus* *Piptoporus*, *Pleurotus*, *Polyporus* or *Trametes* species or combinations thereof; a mycelium extract of *Antrodia*, *Beauveria*, *Copelandia*, *Cordyceps*, *Ganoderma*, *Fomitopsis*, *Grifola*, *Hericum*, *Hypsizygus*, *Inonotus*, *Isaria*, *Panaeolus*, *Phellinus*, *Piptoporus*, *Pleurotus*, *Polyporus* or *Trametes* species, or combinations thereof; or a fruitbody extract of *Antrodia*, *Beauveria*, *Copelandia*, *Cordyceps*, *Fomitopsis*, *Ganoderma*, *Grifola*, *Hericum*, *Hypsizygus*, *Inonotus*, *Isaria*, *Panaeolus*, *Phellinus*, *Piptoporus*, *Pleurotus*, *Polyporus* or *Trametes* species, or combinations thereof.

(115) In one aspect described herein, the fungi comprise one of more of *Antrodia camphoratus*, *Antrodia cinnamomea*, *Fomitopsis officinalis*, *Ganoderma annulare*, *Ganoderma applanatum*, *Ganoderma brownii*, *Ganoderma lucidum*, *Ganoderma lingzhi*, *Ganoderma resinaceum*, *Hypsizygus tessulatus*, *Hypsizygus ulmarius*, *Inonotus obliquus*, *Trametes versicolor*, *Pochonia chlamydosporia*, or *Pleurotus ostreatus*.

(116) In another aspect described herein, the fungi comprise one or more of *Agaricus augustus*, *Agaricus blazei*, *Agaricus bonardii*, *Agaricus brasiliensis*, *Agaricus campestris*, *Agaricus lilaceps*, *Agaricus subrufescens*, *Agaricus sylvicola*, *Agrocybe aegerita*, *Agrocybe arvalis*, *Agrocybe pediades*, *Agrocybe praecox*, *Antrodia cinnamomea*, *Clitocybe odora*, *Conocybe cyanopus*, *Conocybe lacteus*, *Conocybe rickenii*, *Conocybe smithii*, *Conocybe tenera*, *Coprinopsis lagopus*, *Coprinopsis nivea*, *Coprinus comatus*, *Coprinus micaceus*, *Fomitiporia robusta*, *Fomitopsis officinalis* (*Laricifomes officinalis*), *Ganoderma atrum*, *Ganoderma brownii*, *Ganoderma curtisii*, *Ganoderma lingzhi*, *Ganoderma oregonense*, *Ganoderma tsugae*, *Gymnopus hydrophilus*, *Gymnopus peronatus*, *Hericium erinaceus*, *Hericium coralloides*, *Hericium ramosum*, *Heterobasidion annosum*, *Hypholoma aurantiaca* (*Leratiomyces ceres*), *Hypholoma capnoides*, *Hypholoma sublateritium*, *Hypsizygus marmoreus*, *Hypsizygus tessulatus*, *Hypsizygus ulmarius*, *Inonotus andersonii*, *Inonotus dryadeus*, *Inonotus hispidus*, *Laetiporus cincinnatus*, *Laetiporus conifericola*, *Laetiporus sulphureus*, *Lentinus ponderosus*, *Lenzites betulina*, *Lepiota procera* (*Macrolepiota procera*), *Lepiota rachodes* (*Chlorophyllum rachodes*), *Lepista nuda*, *Mycena alcalina*, *Mycena aurantiadisca*, *Mycena pura*, *Panaeolus foenisecii*, *Panaeolus subbalteatus*, *Panellus serotinus*, *Panellus stipticus*, *Phellinus igniarius*, *Phellinus linteus*, *Phellinus pini*, *Piptoporus betulinus*, *Pleurotus columbinus*, *Pleurotus cystidiosus*, *Pleurotus ostreatus*, *Pleurotus pulmonarius*, *Pleurotus sapidus*, *Pleurotus tuberregium*, *Pluteus cervinus*, *Polyporus elegans*, *Psathyrella aquatica*, *Psathyrella condolleana*, *Psathyrella hydrophila*, *Psilocybe allenii*, *Psilocybe azurescens*, *Psilocybe caerulescens*, *Psilocybe coprophila*, *Psilocybe cubensis*, *Psilocybe cyanescens*, *Psilocybe ovoideocystidiata*, *Psilocybe stuntzii*, *Psilocybe subaeruginosa*, *Stereum complicatum*, *Stereum hirsutum*, *Stereum ostrea*, *Stropharia aeruginosa*, *Stropharia cyanea*, *Stropharia rugoso-annulata*, *Stropharia semiglobata*, *Stropharia semigloboides*, *Stropharia squamosa*, *Stropharia thrausta*, *Stropharia umbonotesens*, *Termitomyces robusta*, *Trametes aesculi*, *Trametes cingulata*, *Trametes ectypa*, *Trametes elegans*, *Trametes gibbosa*, *Trametes hirsuta*, *Trametes ochracea*, *Trametes pubescens*, *Trametes villosa*, *Volvaria bombycina*, *Volvariella volvacea*, *Wolfiporia cocos*, or combinations thereof. The above composition can also contain one or more adverse compounds as described herein.

(117) Another embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof combined with one or more extracts or pure chemicals from plant species comprising one or more of *Bacopa* species (*Bacopa monnien*), Gotu kola (*Centella asiatica*), and Gingko (*Ginkgo biloba*, Ginger (*Zingiber officinale*), Holy Basil (*Ocimum sanctum*), Hu Zhang (*Polygonum cuspidatum*), Oregano (*Origanum vulgare*, *Origanum onites*), Rosemary (*Rosmarinus officinalis*, *Rosmarinus eriocalyx*, species in the genus *Rosmarinus*), Turmeric (*Curcuma longa*), Green Tea (*Camellia sinensis*), lavender (*Lavandula spica* and related species in the genus *Lavandula*), skullcap (*Scutellaria lateriflora*) oat straw (*Avena sativa*, *Avena byzantina*), *Salvia divinorum*, aka Diviner's Sage, *Banisteriopsis caapi* and *Psychotria* species, plants containing ibogaine (*Tabemanthe iboga*, *Voacanga africana* and *Tabemaemontana undulate*), peyote (*Lophophora williamsii*), the seeds of morning glory (*Ipomoea tricolor* and related species) and Hawaiian baby wood rose (*Argyrea nervosa*), *Acacia confusa*, *Acacia obtusifolia*, *Acacia simplicifolia*, *Desmanthus Illinoensis*, or *Cannabis* (*Cannabis sativa*, *C. indica* and *C. ruderalis*). The above composition can also contain one or more adverse compounds as described herein.

(118) Another embodiment is a composition of one or more tryptamines or in pure form or extracts from psilocybin containing mushrooms, or combinations thereof combined with one or more monamine oxidase (MAO) inhibitors, such as β -carbolines (e.g., harmine, harmine, norharmine, perlolyrine, harmol, cordysin, inter alia), to any of the above mentioned compositions to enhance the pharmaceutical efficacy of the tryptamine(s).

(119) Pharmaceutical excipients useful for the compositions as described herein comprise: acidifying agents (acetic acid, glacial acetic acid, citric acid, fumaric acid, hydrochloric acid, diluted hydrochloric acid, malic acid, nitric acid, phosphoric acid, diluted phosphoric acid, sulfuric acid, tartaric acid); alkalizing agents (ammonia solution, ammonium carbonate, diethanolamine, diisopropanolamine, potassium hydroxide, sodium bicarbonate, sodium borate, sodium carbonate, sodium hydroxide, trolamine); antifoaming agents (dimethicone, simethicone); antimicrobial preservatives (benzalkonium

chloride, benzalkonium chloride solution, benzethonium chloride, benzoic acid, benzyl alcohol, butylparaben, cetylpyridinium chloride, chlorobutanol, chlorocresol, cresol, dehydroacetic acid, ethylparaben, methylparaben, methylparaben sodium, phenol, phenylethyl alcohol, phenylmercuric acetate, phenylmercuric nitrate, potassium benzoate, potassium sorbate, propylparaben, propylparaben sodium, sodium benzoate, sodium dehydroacetate, sodium propionate, ascorbic acid, thimerosal, thymol); antioxidants (ascorbic acid, ascorbyl palmitate, butylated hydroxyanisole, butylated hydroxytoluene, hypophosphorous acid, monothioglycerol, propyl gallate, sodium formaldehyde sulfoxylate, sodium metabisulfite, sodium thiosulfate, sulfur dioxide, tocopherol, tocopherols excipient); buffering agents (acetic acid, ammonium carbonate, ammonium phosphate, boric acid, citric acid, lactic acid, phosphoric acid, potassium citrate, potassium metaphosphate, potassium phosphate monobasic, sodium acetate, sodium citrate, sodium lactate solution, dibasic sodium phosphate, monobasic sodium phosphate); chelating agents (edetate disodium, ethylenediaminetetraacetic acid and salts, edetic acid); coating agents (sodium carboxymethylcellulose, cellulose acetate, cellulose acetate phthalate, ethylcellulose, gelatin, pharmaceutical glaze, hydroxypropyl cellulose, hydroxypropyl methylcellulose, hydroxypropyl methylcellulose phthalate, methacrylic acid copolymer, methylcellulose, polyvinyl acetate phthalate, shellac, sucrose, titanium dioxide, carnauba wax, microcrystalline wax, zein); colorants (caramel, red, yellow, black or ferric blends, oxide); complexing agents (ethylenediaminetetraacetic acid and salts (EDTA), edetic acid, gentisic acid ethanolamide, oxyquinoline sulfate); desiccants (calcium chloride, calcium sulfate, silicon dioxide); emulsifying and/or solubilizing agents (acacia, cholesterol, diethanolamine (adjunct), glyceryl monostearate, lanolin alcohols, mono- and di-glycerides, monoethanolamine (adjunct), lecithin, oleic acid (adjunct), oleyl alcohol (stabilizer), poloxamer, polyoxyethylene 50 stearate, polyoxyl 35 castor oil, polyoxyl 40 hydrogenated castor oil, polyoxyl 10 oleyl ether, polyoxyl 20 cetostearyl ether, polyoxyl 40 stearate, polysorbate 20, polysorbate 40, polysorbate 60, polysorbate 80, diacetate, monostearate, sodium lauryl sulfate, sodium stearate, sorbitan monolaurate, sorbitan monooleate, sorbitan monopalmitate, sorbitan monostearate, stearic acid, trolamine, emulsifying wax); filtering aids (powdered cellulose, purified siliceous earth); flavors and perfumes (anethole, benzaldehyde, ethyl vanillin, menthol, methyl salicylate, monosodium glutamate, orange flower oil, peppermint, peppermint oil, peppermint spirit, rose oil, stronger rose water, thymol, tolu balsam tincture, vanilla, vanilla tincture, vanillin); humectants (glycerol, hexylene glycol, sorbitol); plasticizers (e.g., castor oil, diacetylated monoglycerides, diethyl phthalate, glycerol, mono- and di-acetylated monoglycerides, propylene glycol, triacetin, triethyl citrate); polymers (e.g., cellulose acetate, alkyl celluloses, hydroxyalkyl, acrylic polymers and copolymers); solvents (acetone, alcohol, diluted alcohol, amylene hydrate, benzyl benzoate, butyl alcohol, carbon tetrachloride, chloroform, corn oil, cottonseed oil, ethyl acetate, glycerol, hexylene glycol, isopropyl alcohol, methyl alcohol, methylene chloride, methyl isobutyl ketone, mineral oil, peanut oil, propylene carbonate, sesame oil, water for injection, sterile water for injection, sterile water for irrigation, purified water); sorbents (powdered cellulose, charcoal, purified siliceous earth); carbon dioxide sorbents (barium hydroxide lime, soda lime); stiffening agents (hydrogenated castor oil, cetostearyl alcohol, cetyl alcohol, cetyl esters wax, hard fat, paraffin, polyethylene excipient, stearyl alcohol, emulsifying wax, white wax, yellow wax); suspending and/or viscosity-increasing agents (acacia, agar, alginic acid, aluminum monostearate, bentonite, purified bentonite, magma bentonite, carbomer, carboxymethylcellulose calcium, carboxymethylcellulose sodium, carboxymethylcellulose sodium carrageenan, microcrystalline and carboxymethylcellulose sodium cellulose, dextrin, gelatin, guar gum, hydroxyethyl cellulose, hydroxypropyl cellulose, hydroxypropyl methylcellulose, magnesium aluminum silicate, methylcellulose, pectin, polyethylene oxide, polyvinyl alcohol, povidone, alginate, silicon dioxide, colloidal silicon dioxide, sodium alginate, tragacanth, xanthan gum); sweetening agents (aspartame, dextrates, dextrose, excipient dextrose, fructose, mannitol, saccharin, calcium saccharin, sodium saccharin, sorbitol, solution sorbitol, sucrose, compressible sugar, confectioner's sugar, syrup); surfactants (simethicone); tablet binders (acacia, alginic acid, sodium carboxymethylcellulose, microcrystalline cellulose, dextrin, ethylcellulose, gelatin, liquid glucose, guar gum, hydroxypropyl methylcellulose, methylcellulose, polyethylene oxide, povidone, pregelatinized starch, syrup); tablet and/or capsule diluents (calcium carbonate, dibasic calcium phosphate, tribasic calcium phosphate,

calcium sulfate, microcrystalline cellulose, powdered cellulose, dextrates, dextrin, dextrose excipient, fructose, kaolin, lactose, mannitol, sorbitol, starch, pregelatinized starch, sucrose, compressible sugar, confectioner's sugar); tablet disintegrants (alginic acid, microcrystalline cellulose, croscarmellose sodium, crospovidone, polacrillin potassium, sodium starch glycolate, starch, pregelatinized starch); tablet and/or capsule lubricants (calcium stearate, glyceryl behenate, magnesium stearate, light mineral oil, sodium stearyl fumarate, stearic acid, purified stearic acid, talc, hydrogenated vegetable oil, zinc stearate); thickening agents (gelatin having a bloom strength of 50-100); tonicity agent (dextrose, glycerol, mannitol, potassium chloride, sodium chloride); vehicle: flavored and/or sweetened (aromatic elixir, compound benzaldehyde elixir, iso-alcoholic elixir, peppermint water, sorbitol solution, syrup, tolu balsam syrup); vehicle: oleaginous (almond oil, corn oil, cottonseed oil, ethyl oleate, isopropyl myristate, isopropyl palmitate, mineral oil, light mineral oil, myristyl alcohol, octyl dodecanol, olive oil, peanut oil, persic oil, sesame oil, soybean oil, squalane); vehicle: solid carrier (sugar spheres); vehicle: sterile (bacteriostatic water for injection, bacteriostatic sodium chloride injection); viscosity-increasing (see suspending agent); water repelling agents (cyclomethicone, dimethicone, simethicone); and/or solubilizing agent (benzalkonium chloride, benzethonium chloride, cetylpyridinium chloride, docusate sodium, nonoxynol 9, nonoxynol 10, octoxynol 9, poloxamer, polyoxyl 35 castor oil, polyoxyl 40, hydrogenated castor oil, polyoxyl 50 stearate, polyoxyl 10 oleyl ether, polyoxyl 20, cetostearyl ether, polyoxyl 40 stearate, polysorbate 20, polysorbate 40, polysorbate 60, polysorbate 80, sodium lauryl sulfate, sorbitan monolaurate, sorbitan monooleate, sorbitan monopalmitate, sorbitan monostearate, tyloxapol). This list is not meant to be exclusive, but instead merely representative of the classes of excipients and the particular excipients that may be used in oral dosage forms as described herein. See *Remington's Essentials of Pharmaceuticals*, Pharmaceutical Press Publishing Company, London, UK, 1^{sup}.st Edition, 2013, and the *Handbook of Pharmaceutical Excipients*, 8^{sup}.th Edition, Pharmaceutical Press Publishing Company London, UK, 2017, each of which is incorporated by reference herein for such teachings.

(120) Another embodiment is a method for manufacturing a dosage form comprising formulating a composition as described herein comprising sprays, capsules, tablets, elixirs, emulsions, lozenges, suspensions, syrups, pills, lotions, epidermal patches, suppositories, inhalers, or injectables. Any methods known to the art for formulating extracts or active principal ingredients into lotions, soaps, etc. may be utilized.

(121) In one embodiment, the pharmaceutical composition comprises a dose of about 1 ng to about 10 mg of one or more tryptamines or an amount of a mushroom (or plant) extract or mushroom (or plant) having an equivalent amount of tryptamine(s). In another embodiment, the composition comprises about 1 µg to about 100 µg of one or more tryptamines or an amount of a mushroom extract or mushroom having an equivalent amount of tryptamine(s). In another embodiment, the composition comprises about 1 µg to about 5 mg of one or more tryptamines or an amount of a mushroom extract or mushroom having an equivalent amount of tryptamine(s). In another embodiment, the composition comprises about 100 µg to about 1 mg of one or more tryptamines or an amount of a mushroom extract or mushroom having an equivalent amount of tryptamine(s). In one aspect, the composition comprises about: 1 µg, 5 µg, 10 µg, 20 µg, 30 µg, 40 µg, 50 µg, 60 µg, 70 µg, 80 µg, 90 µg, 100 µg, 110 µg, 120 µg, 130 µg, 140 µg, 150 µg, 160 µg, 170 µg, 180 µg, 190 µg, 200 µg, 210 µg, 220 µg, 230 µg, 240 µg, 250 µg, 260 µg, 270 µg, 280 µg, 290 µg, 300 µg, 310 µg, 320 µg, 330 µg, 340 µg, 350 µg, 360 µg, 370 µg, 380 µg, 390 µg, 400 µg, 410 µg, 420 µg, 430 µg, 440 µg, 450 µg, 460 µg, 470 µg, 480 µg, 490 µg, 500 µg, 510 µg, 520 µg, 530 µg, 540 µg, 550 µg, 560 µg, 570 µg, 580 µg, 590 µg, 600 µg, 610 µg, 620 µg, 630 µg, 640 µg, 650 µg, 660 µg, 670 µg, 680 µg, 690 µg, 700 µg, 710 µg, 720 µg, 730 µg, 740 µg, 750 µg, 760 µg, 770 µg, 780 µg, 790 µg, 800 µg, 810 µg, 820 µg, 830 µg, 840 µg, 850 µg, 860 µg, 870 µg, 880 µg, 890 µg, 900 µg, 910 µg, 920 µg, 930 µg, 940 µg, 950 µg, 960 µg, 970 µg, 980 µg, 990 µg, or 1000 µg of one or more tryptamines or an amount of a mushroom extract or mushroom having an equivalent amount of tryptamine(s). In another aspect, the composition comprises about: 0.1 mg, 0.2 mg, 0.3 mg, 0.4 mg, 0.5 mg, 0.6 mg, 0.7 mg, 0.8 mg, 0.9 mg, 1.0 mg, 1.1 mg, 1.2 mg, 1.3 mg, 1.4 mg, 1.5 mg, 1.6 mg, 1.7 mg, 1.8 mg, 1.9 mg, 2.0 mg, 2.1 mg, 2.2 mg, 2.3 mg, 2.4 mg, 2.5 mg, 2.6 mg, 2.7 mg, 2.8 mg, 2.9 mg, 3.0 mg, 3.1 mg, 3.2 mg, 3.3 mg, 3.4 mg, 3.5 mg, 3.6 mg, 3.7 mg, 3.8 mg, 3.9 mg, 4.0 mg, 4.1 mg, 4.2 mg,

4.3 mg, 4.4 mg, 4.5 mg, 4.6 mg, 4.7 mg, 4.8 mg, 4.9 mg, 5.0 mg, 5.1 mg, 5.2 mg, 5.3 mg, 5.4 mg, 5.5 mg, 5.6 mg, 5.7 mg, 5.8 mg, 5.9 mg, 6.0 mg, 6.1 mg, 6.2 mg, 6.3 mg, 6.4 mg, 6.5 mg, 6.6 mg, 6.7 mg, 6.8 mg, 6.9 mg, 7.0 mg, 7.1 mg, 7.2 mg, 7.3 mg, 7.4 mg, 7.5 mg, 7.6 mg, 7.7 mg, 7.8 mg, 7.9 mg, 8.0 mg, 8.1 mg, 8.2 mg, 8.3 mg, 8.4 mg, 8.5 mg, 8.6 mg, 8.7 mg, 8.8 mg, 8.9 mg, 9.0 mg, 9.1 mg, 9.2 mg, 9.3 mg, 9.4 mg, 9.5 mg, 9.6 mg, 9.7 mg, 9.8 mg, 9.9 mg, or 10.0 mg of one or more tryptamines or an amount of a mushroom extract or mushroom having an equivalent amount of tryptamine(s).

(122) The percent mass of psilocybin, psilocin, and baeocystin in dried *Psilocybe* mushrooms is shown in Table 2.

(123) TABLE-US-00002 TABLE 2 Psilocybin, psilocin, and baeocystin concentrations in *psilocybe* mushrooms Mass percent based on dry weight of mushroom Species Psilocybin Psilocin Baeocystin *P. azurescens* 1.78 0.38 0.35 *P. bohemica* 1.34 0.11 0.02 *P. semilanceata* 0.98 0.02 0.36 *P. baeocystis* 0.85 0.59 0.10 *P. cyanescens* 0.85 0.36 0.03 *P. tampanensis* 0.68 0.32 n/d *P. cubensis* 0.63 0.60 0.025 *P. weilii* 0.61 0.27 0.05 *P. hoogshagenii* 0.60 0.10 n/d *P. stuntzii* 0.36 0.12 0.02 *P. cyanofibrillosa* 0.21 0.04 n/d *P. liniformans* 0.16 n/d 0.05 Average 0.754% 0.243% 0.137% Data from Stamets, *Psilocybin Mushrooms of the World*, Ten Speed Press, page 39 (1996)

(124) Table 3 shows the relative amount of psilocybin, psilocin, and baeocystin in dried *Psilocybe* mushrooms.

(126) In one embodiment, the dose of tryptamine is about 0.00001 mg/kg to about 0.2 mg/kg, assuming an average mass of 70 kg for a human. In one embodiment, the dose of tryptamine is 0.0001 mg/kg to about 0.001 mg/kg. In another embodiment, the dose of tryptamine is 0.001 mg/kg to about 0.01 mg/kg. In another embodiment, the dose of tryptamine is 0.01 mg/kg to about 0.1 mg/kg. In another embodiment, the dose of tryptamine is 0.1 mg/kg to about 0.2 mg/kg. In another embodiment, the dose of tryptamine is about 0.005 mg/kg, 0.01 mg/kg, 0.02 mg/kg, 0.03 mg/kg, 0.04 mg/kg, 0.05 mg/kg, 0.06 mg/kg, 0.07 mg/kg, 0.08 mg/kg, 0.09 mg/kg, 0.10 mg/kg, 0.11 mg/kg, 0.12 mg/kg, 0.13 mg/kg, 0.14 mg/kg, 0.15 mg/kg, 0.16 mg/kg, 0.17 mg/kg, 0.18 mg/kg, 0.19 mg/kg, 0.20 mg/kg, In another embodiment, the dose of tryptamine is about 0.01 mg/kg to about 0.05 mg/kg. In another embodiment, the dose of tryptamine is about 0.01 mg/kg to about 0.02 mg/kg.

(127) In one embodiment, the dose of the phenethylamines, amphetamines, erinacines, hericenones, cannabinoids one or more adverse compounds such as niacin, capsaicin, ipecac, apomorphine, bittering agents, or an amount of a mushroom or plant extract or mushroom or plant having an equivalent amount of about 1 ng, 5 ng, 10 ng, 20 ng, 30 ng, 40 ng, 50 ng, 60 ng, 70 ng, 80 ng, 90 ng, 100 ng, 110 ng, 120 ng, 130 ng, 140 ng, 150 ng, 160 ng, 170 ng, 180 ng, 190 ng, 200 ng, 210 ng, 220 ng, 230 ng, 240 ng, 250 ng, 260 ng, 270 ng, 280 ng, 290 ng, 300 ng, 310 ng, 320 ng, 330 ng, 340 ng, 350 ng, 360 ng, 370 ng, 380 ng, 390 ng, 400 ng, 410 ng, 420 ng, 430 ng, 440 ng, 450 ng, 460 ng, 470 ng, 480 ng, 490 ng, 500 ng, 510 ng, 520 ng, 530 ng, 540 ng, 550 ng, 560 ng, 570 ng, 580 ng, 590 ng, 600 ng, 610 ng, 620 ng, 630 ng, 640 ng, 650 ng, 660 ng, 670 ng, 680 ng, 690 ng, 700 ng, 710 ng, 720 ng, 730 ng, 740 ng, 750 ng, 760 ng, 770 ng, 780 ng, 790 ng, 800 ng, 810 ng, 820 ng, 830 ng, 840 ng, 850 ng, 860 ng, 870 ng, 880 ng, 890 ng, 900 ng, 910 ng, 920 ng, 930 ng, 940 ng, 950 ng, 960 ng, 970 ng, 980 ng, 990 ng, or 1000 ng; 1 µg, 5 µg, 10 µg, 20 µg, 30 µg, 40 µg, 50 µg, 60 µg, 70 µg, 80 µg, 90 µg, 100 µg, 110 µg, 120 µg, 130 µg, 140 µg, 150 µg, 160 µg, 170 µg, 180 µg, 190 µg, 200 µg, 210 µg, 220 µg, 230 µg, 240 µg, 250 µg, 260 µg, 270 µg, 280 µg, 290 µg, 300 µg, 310 µg, 320 µg, 330 µg, 340 µg, 350 µg, 360 µg, 370 µg, 380 µg, 390 µg, 400 µg, 410 µg, 420 µg, 430 µg, 440 µg, 450 µg, 460 µg, 470 µg, 480 µg, 490 µg, 500 µg, 510 µg, 520 µg, 530 µg, 540 µg, 550 µg, 560 µg, 570 µg, 580 µg, 590 µg, 600 µg, 610 µg, 620 µg, 630 µg, 640 µg, 650 µg, 660 µg, 670 µg, 680 µg, 690 µg, 700 µg, 710 µg, 720 µg, 730 µg, 740 µg, 750 µg, 760 µg, 770 µg, 780 µg, 790 µg, 800 µg, 810 µg, 820 µg, 830 µg, 840 µg, 850 µg, 860 µg, 870 µg, 880 µg, 890 µg, 900 µg, 910 µg, 920 µg, 930 µg, 940 µg, 950 µg, 960 µg, 970 µg, 980 µg, 990 µg, or 1000 µg; 0.1 mg, 0.2 mg, 0.3 mg, 0.4 mg, 0.5 mg, 0.6 mg, 0.7 mg, 0.8 mg,

0.9 mg, 1.0 mg, 1.1 mg, 1.2 mg, 1.3 mg, 1.4 mg, 1.5 mg, 1.6 mg, 1.7 mg, 1.8 mg, 1.9 mg, 2.0 mg, 2.1 mg, 2.2 mg, 2.3 mg, 2.4 mg, 2.5 mg, 2.6 mg, 2.7 mg, 2.8 mg, 2.9 mg, 3.0 mg, 3.1 mg, 3.2 mg, 3.3 mg, 3.4 mg, 3.5 mg, 3.6 mg, 3.7 mg, 3.8 mg, 3.9 mg, 4.0 mg, 4.1 mg, 4.2 mg, 4.3 mg, 4.4 mg, 4.5 mg, 4.6 mg, 4.7 mg, 4.8 mg, 4.9 mg, 5.0 mg, 5.1 mg, 5.2 mg, 5.3 mg, 5.4 mg, 5.5 mg, 5.6 mg, 5.7 mg, 5.8 mg, 5.9 mg, 6.0 mg, 6.1 mg, 6.2 mg, 6.3 mg, 6.4 mg, 6.5 mg, 6.6 mg, 6.7 mg, 6.8 mg, 6.9 mg, 7.0 mg, 7.1 mg, 7.2 mg, 7.3 mg, 7.4 mg, 7.5 mg, 7.6 mg, 7.7 mg, 7.8 mg, 7.9 mg, 8.0 mg, 8.1 mg, 8.2 mg, 8.3 mg, 8.4 mg, 8.5 mg, 8.6 mg, 8.7 mg, 8.8 mg, 8.9 mg, 9.0 mg, 9.1 mg, 9.2 mg, 9.3 mg, 9.4 mg, 9.5 mg, 9.6 mg, 9.7 mg, 9.8 mg, 9.9 mg, or 10.0 mg; 0.1 mg, 0.25 mg, 0.5 mg, 1.0 mg, 2.5 mg, 5.0 mg, 10.0 mg, 20.0 mg, 30.0 mg, 40.0 mg, 50.0 mg, 60.0 mg, 70.0 mg, 80.0 mg, 90.0 mg, or 100.0 mg; 1 mg, 5 mg, 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 125 mg, 150 mg, 175 mg, 200 mg, 225 mg, 250 mg, 275 mg, 300 mg, 325 mg, 350 mg, 375 mg, 400 mg, 425 mg, 450 mg, 475 mg, or 500 mg of compound.

(128) In one embodiment, the dose of the phenethylamines, amphetamines, erinacines, hericenones, cannabinoids one or more adverse compounds such as niacin, capsaicin, ipecac, apomorphine, bittering agents, or an amount of a mushroom or plant extract or mushroom or plant having an equivalent amount of about 0.1 mg/kg, 0.25 mg/kg, 0.5 mg/kg, 0.75 mg/kg, 1 mg/kg, 2.5 mg/kg, 5 mg/kg, 10 mg/kg, 15 mg/kg, 20 mg/kg, 25 mg/kg, 30 mg/kg, 35 mg/kg, 40 mg/kg, 45 mg/kg, 50 mg/kg, 55 mg/kg, 60 mg/kg, 65 mg/kg, 70 mg/kg, 75 mg/kg, 80 mg/kg, 85 mg/kg, 90 mg/kg, 95 mg/kg, or 100 mg/kg.

(129) In one embodiment, the pharmaceutical composition comprises: 0.001 mg to 0.01 mg, 0.01 mg to 0.1 mg, 0.01 mg to 1 mg, 0.1 mg to 5 mg, 0.1 mg to 1 mg, 0.5 mg to 1 mg, 0.5 mg to 5 mg, 0.25 mg to 1 mg, 0.2 mg to 2 mg, 0.2 mg to 5 mg of one or more tryptamines or an amount of a plant or mushroom extract or plant or mushroom to provide an equivalent dose; and/or 0.1 mg to 1 mg, 1 mg to 10 mg, 10 mg to 100 mg, 10 mg to 50 mg, 50 mg to 100 mg, 20 mg to 80 mg, 20 mg to 50 mg, 50 mg to 100 mg, 50 mg to 80 mg, 10 mg to 80 mg phenethylamines or amphetamines or an amount of a plant or mushroom extract or plant or mushroom to provide an equivalent dose; and/or 1 µg to 5 µg, 1 µg to 10 µg, 5 µg to 10 µg, 10 µg to 5 mg, 10 µg to 100 µg, 100 µg to 1 mg, 500 µg to 1 mg, 500 µg to 5 mg, 1 mg to 5 mg, 100 µg to 1 mg, 100 µg to 500 µg, 100 µg to 250 µg; 250 µg to 1 mg; 750 µg to 1 mg, 250 µg to 750 µg, erinacines or hericenones or an amount of a plant or mushroom extract or plant or mushroom to provide an equivalent dose; and/or 0.01 mg to 0.1 mg, 0.01 mg to 1 mg, 0.1 mg to 10 mg, 0.1 mg to 1 mg, 0.5 mg to 1 mg, 0.5 mg to 5 mg, 0.25 mg to 1 mg, 0.2 mg to 2 mg, 0.2 mg to 5 mg, 1 mg to 10 mg cannabinoids or an amount of a plant extract or plant or mushroom to provide an equivalent dose; and/or 0.1 mg to 10 mg, 1 mg to 500 mg, 1 mg to 100 mg, 200 mg to 500 mg, 50 mg to 200 mg, 10 mg to 50 mg, 50 mg to 200 mg, 1 mg to 200 mg, 1 mg to 50 mg of adverse.

(130) In one embodiment, the pharmaceutical compositions described herein provide a dosage form of the pharmaceutical compositions described here for administration to a subject. In one embodiment, the subject is suffering from or has the symptoms of one or more neurologic diseases or disorders or wishes to enhance one or more cognitive or sensory motor traits. The dosage form can be administered, for example, to a subject, or a subject in need thereof. In one aspect, the subject is a mammal, or a mammal in need thereof. In one aspect, the subject is a human, or human in need thereof. In one aspect, the subject is a human or a human in need thereof. In one aspect, the subject is a child (~0-9 years old) or an adolescent (~10-17 years old). In one aspect, the subject is from about 0 to about 9 years of age. In another aspect, the subject is from about 10 years to about 17 years of age. In another aspect, the subject is over 17 years of age. In another aspect, the subject is an adult (≥18 years of age).

(131) One or more dosage forms of the compositions described herein can be administered, for example, 1×, 2×, 3×, 4×, 5×, 6×, or even more times per day. One or more dosage forms can be administered, for example, for 1, 2, 3, 4, 5, 6, 7 days, or even longer. One or more dosage forms can be administered, for example, for 1, 2, 3, 4 weeks, or even longer. One or more dosage forms can be administered, for example, for 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12 months, 1 year, 2 years, 3 years, 4 years, 5 years, over 5 years, a decade, multiple decades, or even longer. One or more dosage forms can be administered at a regular interval until the subject or subject in need thereof, does not require treatment, prophylaxis, or amelioration of any disease or condition including but not limited to a neurological or neurodegenerative disease or disorder.

(132) In one embodiment, the compositions described herein can be administered as dosage forms in various regimens, including one dose per day (QD), two doses per day (BID), three doses per day (TID), or four times per day (QID) to achieve a total daily dosage. In another embodiment, any of the foregoing doses comprise a total daily dosage.

(133) Another embodiment described herein is a method of treating a subject suffering from or having the symptoms of a neurological or neurodegenerative disease or disorder by orally administering one or more of the pharmaceutical compositions described herein to the subject. The composition may be administered in one or more doses, one or more times per day for a total daily dosage.

(134) In one aspect, the compositions described herein are effective to at least partially treat, alleviate, prevent or ameliorate serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, psychiatric, or mood disorders, e.g., depression, anxiety, major depressive disorder, treatment resistant depression, persistent depression, manic depression or bipolar disorder, depressive psychosis, perinatal depression, premenstrual dysphoric disorder, seasonal depressions, situational depression, panic disorder, obsessive compulsive disorder, post-traumatic stress disorder, attention deficit/hyperactivity disorder, sleep disorders, eating disorders, schizophrenia, personality disorders, substance abuse disorders (drug abuse, addiction, alcoholism); neuronal injuries or physical neurodegeneration (e.g., physical injury, head trauma, spinal cord trauma, concussion, peripheral neuron trauma, paralysis, ischemia, hypoxia, stroke; organophosphates, lead, heavy metals, nerve agents, other toxic compounds, prions, amyloid plaque, neurotoxic viruses, stress); neurodegenerative diseases (e.g., Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, multiple sclerosis, frontotemporal dementia, Huntington's disease, adrenal leukodystrophy, Alexander's disease, Alper's disease, Alzheimer's disease, amyotrophic lateral sclerosis, balo concentric sclerosis, Canavan disease, Charcot-Marie-Tooth disease, childhood ataxia with central nervous system hypomyelination, chronic idiopathic peripheral neuropathy, frontotemporal dementia, Huntington's disease, Krabbe disease, monomelic amyotrophy, multiple sclerosis (MS), neurodegeneration, neuromyelitis optica, neuropathic pain, neurosarcoidosis, Parkinson's disease, Pelizaeus-Merzbacher disease, primary lateral sclerosis, progressive supranuclear palsy, radicular pain, radiculopathic pain, Schilder's disease, sciatic pain, sciatica, subacute necrotizing myelopathy, transverse myelitis, or Zellweger syndrome); congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder; cognitive enhancement, intelligence enhancement, creativity enhancement, memory improvement, learning enhancement and improvement, spiritual enhancement, "mind expansion," IQ improvement, EQ improvement, balance enhancement, athleticism, motor skill enhancement, special navigation, clairvoyance, psychic enhancement, or general improvement of mental health.

(135) One embodiment described herein is a composition comprising one or more of a tryptamine, a phenethylamine, an amphetamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof, and a pharmaceutically acceptable carrier, for use in treating neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof.

(136) Another embodiment described herein is a method of treating, preventing, ameliorating or reducing the symptoms of serotonin (5-hydroxytryptamine, 5-HT) receptor disorders, neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health in a subject in need thereof by administering a composition comprising one or more of a tryptamine, a phenethylamine, an amphetamine, an erinacine, a hericenone, a cannabinoid, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof, and a pharmaceutically acceptable carrier.

(137) In one embodiment, the tryptamine comprises psilocybin, baeocystin, norbaeocystin, psilocin, norpsilocin, 4-hydroxytryptamine, N,N-dimethyltryptamine, 5-hydroxytryptamine (serotonin), tryptamine, aeruginascin, 4-hydroxy-N,N,N-trimethyltryptamine, 5-hydroxy-N,N,N-trimethyltryptamine

(bufotenine), N-methyltryptamine, N-ethyltryptamine, N-methyl-N-ethyltryptamine, N-methyl-N-propyltryptamine, N,N-diethyltryptamine, N-methyl-N-isopropyltryptamine, N-ethyl-N-isopropyltryptamine, N,N-diisopropyltryptamine, N,N-dipropyltryptamine, N,N-dipropyltryptamine, N,N-diallyltryptamine, 4-hydroxytryptamine, 4-hydroxy-N-methyltryptamine (norpsilocin), 4-hydroxy-N,N-dimethyltryptamine (psilocin), 4-hydroxy-N-methyl-N-ethyltryptamine, 4-hydroxy-N-methyl-N-propyltryptamine, 4-hydroxy-N,N-diethyltryptamine, 4-hydroxy-N,N-diethyltryptamine, 4-hydroxy-N-ethyl-N-isopropyltryptamine, 4-hydroxy-N,N-diisopropyltryptamine, 4-hydroxy-N,N-dipropyltryptamine, 4-hydroxy-N,N-dipropyltryptamine, 4-hydroxy-N,N-diallyltryptamine, 4-methoxytryptamine, 4-methoxy-N-methyltryptamine (norpsilocin), 4-methoxy-N,N-dimethyltryptamine (psilocin), 4-methoxy-N-methyl-N-ethyltryptamine, 4-methoxy-N-methyl-N-propyltryptamine, 4-methoxy-N,N-diethyltryptamine, 4-methoxy-N,N-diethyltryptamine, 4-methoxy-N-ethyl-N-isopropyltryptamine, 4-methoxy-N,N-diisopropyltryptamine, 4-methoxy-N,N-dipropyltryptamine, 4-methoxy-N,N-dipropyltryptamine, 4-methoxy-N,N-diallyltryptamine, 4-acetoxytryptamine, 4-acetoxy-N-methyltryptamine, 4-acetoxy-N-methyl-N-ethyltryptamine, 4-acetoxy-N-methyl-N-ethyltryptamine, 4-acetoxy-N-methyl-N-propyltryptamine, 4-acetoxy-N,N-diethyltryptamine, 4-acetoxy-N-methyl-N-isopropyltryptamine, 4-acetoxy-N-ethyl-N-isopropyltryptamine, 4-acetoxy-N,N-diisopropyltryptamine, 4-acetoxy-N,N-dipropyltryptamine, 4-acetoxy-N,N-dipropyltryptamine, 4-acetoxy-N,N-diallyltryptamine, 5-hydroxytryptamine, 5-hydroxy-N-methyltryptamine, 5-hydroxy-N,N-dimethyltryptamine (bufotenine), 5-hydroxy-N-methyl-N-ethyltryptamine, 5-hydroxy-N-methyl-N-propyltryptamine, 5-hydroxy-N,N-diethyltryptamine, 5-hydroxy-N-methyl-N-isopropyltryptamine, 5-hydroxy-N-ethyl-N-isopropyltryptamine, 5-hydroxy-N,N-diisopropyltryptamine, 5-hydroxy-N,N-dipropyltryptamine, 5-hydroxy-N,N-dipropyltryptamine, 5-hydroxy-N,N-diallyltryptamine, 5-methoxytryptamine, 5-methoxy-N-methyltryptamine, 5-methoxy-N,N-dimethyltryptamine, 5-methoxy-N-methyl-N-ethyltryptamine, 5-methoxy-N-methyl-N-propyltryptamine, 5-methoxy-N,N-diethyltryptamine, 5-methoxy-N-methyl-N-isopropyltryptamine, 5-methoxy-N-ethyl-N-isopropyltryptamine, 5-methoxy-N,N-diisopropyltryptamine, 5-methoxy-N,N-dipropyltryptamine, 5-methoxy-N,N-dipropyltryptamine, 5-methoxy-N,N-diallyltryptamine, 5-acetoxytryptamine, 5-acetoxy-N-methyltryptamine, 5-acetoxy-N,N-dimethyltryptamine, 5-acetoxy-N-methyl-N-ethyltryptamine, 5-methoxy-N-methyl-N-propyltryptamine, 5-acetoxy-N,N-diethyltryptamine, 5-acetoxy-N-methyl-N-isopropyltryptamine, 5-acetoxy-N-ethyl-N-isopropyltryptamine, 5-acetoxy-N,N-diisopropyltryptamine, 5-acetoxy-N,N-dipropyltryptamine, 5-acetoxy-N,N-dipropyltryptamine, 5-acetoxy-N,N-diallyltryptamine, α -methyltryptamine, N-ethyl-N-isopropyltryptamine, N-methyl-N-butyltryptamine, 2, α -dimethyltryptamine, α -N-dimethyltryptamine, α -methyl-N,N-dimethyltryptamine, α -ethyltryptamine, 2-methyl-N,N-dimethyltryptamine, 2-methyl-N,N-diethyltryptamine, 1-methylpsilocin, 5-methoxy- α -methyltryptamine, ibogaine, harmaline, 7-methoxy-1-methyl-1,2,3,4-tetrahydro-b-carboline (tetrahydroharmine), N,N-diethyl-D-lysergamide (LSD), 6-allyl-N,N-diethyl-norlysergic acid (6-allyl-N,N-diethyl-norlysergic acid), 9,10-didehydro-N,N,6-triethylergoline-8b-carboxamide (6,N,N-triethyl-norlysergic acid), 9,10-didehydro-6-propyl-N,N-diethylergoline-8b-carboxamide (6-propyl-norlysergic acid), other tryptamine compounds, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof.

(138) In another embodiment, the tryptamine comprises: 6-Allyl-N,N-diethyl-norlysergic acid (AL-LAD), N,N-dibutyl-tryptamine (DBT), N,N-diethyl-tryptamine (DET), N,N-diisopropyl-tryptamine (DiPT), 5-methoxy- α -methyl-tryptamine (α ,O-DMS), N,N-dimethyl-tryptamine (DMT), 2, α -dimethyl-tryptamine (2, α -DMT), α ,N-dimethyl-tryptamine (α ,N-DMT), N,N-dipropyl-tryptamine (DPT), N-ethyl-N-isopropyl-tryptamine (EiPT), α -ethyl-tryptamine (AET), 6,N,N-tryptaminetriethyl-norlysergic acid (ETH-LAD), 3,4-dihydro-7-methoxy-1-methyl-carboline (Harmaline), 7-methoxy-1-methyl-carboline (Harmine), N,N-dibutyl-4-hydroxy-tryptamine (4-HO-DBT), N,N-diethyl-4-hydroxy-tryptamine (4-HO-DET), N,N-diisopropyl-4-hydroxy-tryptamine (4-HO-DiPT), N,N-dimethyl-4-hydroxy-tryptamine (4-HO-DMT), N,N-dimethyl-5-hydroxy-tryptamine (5-HO-DMT), N,N-dipropyl-4-hydroxy-tryptamine (4-HO-DPT), N-ethyl-4-hydroxy-N-methyl-tryptamine (4-HO-MET), 4-hydroxy-N-isopropyl-N-methyl-tryptamine (4-HO-MiPT), 4-hydroxy-N-methyl-N-propyl-tryptamine (4-HO-MPT), 4-hydroxy-N,N-tetramethylene-tryptamine (4-HO-pyr-tryptamine), 12-methoxyibogamine (Ibogaine), N,N-diethyl-

lysergic acid (LSD), N-butyl-N-methyl-tryptamine (MBT), N,N-diisopropyl-4,5-methylenedioxy-tryptamine (4,5-MDO-DiPT), N,N-diisopropyl-5,6-methylenedioxy-tryptamine (5,6-MDO-DiPT), N,N-dimethyl-4,5-methylenedioxy-tryptamine (4,5-MDO-DMT), N,N-dimethyl-5,6-methylenedioxy-tryptamine (5,6-MDO-DMT), N-isopropyl-N-methyl-5,6-methylenedioxy-tryptamine (5,6-MDO-MiPT), N,N-diethyl-2-methyl-tryptamine (2-Me-DET), 2,N,N-tryptaminerimethyl-tryptamine (2-Me-DMT), N-acetyl-5-methoxy-tryptamine (melatonin), N,N-diethyl-5-methoxy-tryptamine (5-MeO-DET), N,N-diisopropyl-5-methoxy-tryptamine (5-MeO-DiPT), 5-methoxy-N,N-dimethyl-tryptamine (5-MeO-DMT), N-isopropyl-4-methoxy-N-methyl-tryptamine (4-MeO-MiPT), N-isopropyl-5-methoxy-N-methyl-tryptamine (5-MeO-MiPT), 5,6-dimethoxy-N-isopropyl-N-methyl-tryptamine (5,6-MeO-MiPT), 5-methoxy-N-methyl-tryptamine (5-MeO-NMT), 5-methoxy-N,N-tetramethylene-tryptamine (5-MeO-pyr-tryptamine), 6-methoxy-1-methyl-1,2,3,4-tetrahydro-carboline (6-MeO-tryptamineHH), 5-methoxy-2,N,N-trimethyl-tryptamine (5-MeO-tryptamineMT), N,N-dimethyl-5-methylthio-tryptamine (5-MeS-DMT), N-isopropyl-N-methyl-tryptamine (MiPT), α -methyl-tryptamine (α -MT), N-ethyl-tryptamine (NET), N-methyl-tryptamine (NMT), 6-propyl-norlysergic acid (PRO-LAD), N,N-tetramethylene-tryptamine (pyr-T), Tryptamine (T), 7-methoxy-1-methyl-1,2,3,4-tetrahydro-carboline (Tetrahydroharmine), or α ,N-dimethyl-5-methoxy-tryptamine (α ,N,O-TMS), or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof. See Shulgin and Shulgin, TIHKAL: The Continuation, Transform Press (1997), which is incorporated by reference herein for the specific teachings thereof.

(139) In one embodiment, the tryptamine comprises a compound having the structure of Formula 1,

In one embodiment, the tryptamine comprises a compound having the structure of Formula 4A or 4B,

(143) ##STR00004##

wherein: R.sub.1 is H, OH, COOH, OCH.sub.3, O(CH.sub.2).sub.nCH.sub.3, (CH.sub.2).sub.nOH, (CH.sub.2).sub.nCOOH, —C(O) CH.sub.3, (CH.sub.2).sub.nOC(O)N(R.sub.6).sub.2, — (CH.sub.2).sub.nC(O)OC(O)OH, PO.sub.4, P.sub.2O.sub.7, P.sub.3O.sub.10, SO.sub.4, S.sub.2O.sub.7, S.sub.3O.sub.10, CHO.sub.3, a C.sub.1-C.sub.6 mono-di-, or tri-carboxylic acid, a pentose sugar, a hexose sugar, or an amino acid; R.sub.2 and R.sub.3 are independently H, CH.sub.3, OH, COOH, (CH.sub.2).sub.nCOOH; OCH.sub.3, O(CH.sub.2).sub.nCH.sub.3, (CH.sub.2).sub.nOH, (CH.sub.2).sub.nNH.sub.2; dimethyl amine, pyrrole, pyrazole, imidazole, pyridine, piperdine, pyridine, pyrimidine, indole, purine, quinoline, morpholino, pyran, or furan; R.sub.4 is H, CH.sub.3, OH, (CH.sub.2).sub.nOH, OCH.sub.3, O(CH.sub.2).sub.nCH.sub.3; and R.sub.6 is H, CH.sub.3, C.sub.1-C.sub.4 alkyl, OH, CHOCH.sub.3, (CH.sub.2).sub.nOH, OCH.sub.3, O(CH.sub.2).sub.nCH.sub.3; where n is 0, 1, 2, 3, or 4; and wherein mono-, di-, and tri-carboxylic acids is selected from acetic acid, acetylsalicylic acid, adipic acid, alginic acid, arachidic acid, ascorbic acid, aspartic acid, benzenesulfonic acid, benzoic acid, bisulfic acid, boric acid, butyric acid, camphoric acid, camphorsulfonic acid, capric acid, caproic acid, caprylic acid, carbonic acid, citric acid, cyclopentanepropionic acid, digluconic acid, dodecylsulfic acid, enanthic acid, ethanesulfonic acid, formic acid, fumaric acid, glucoheptanoic acid, gluconic acid, glutamic acid, glutaric acid, glyceric acid, glycerophosphoric acid, glycine, glycolic acid, hemisulfic acid, heptanoic acid, hexanoic acid, hippuric acid, hydrobromic acid, hydrochloric acid, hydroiodic acid, hydroxyethanesulfonic acid, lactic acid, lauric acid, maleic acid, malic acid, malonic acid, mandelic acid, margaric acid, methanesulfonic acid, mucic acid, myristic acid, naphthylanesulfonic acid, naphthylic acid, nicotinic acid, nonadecylic acid, oxalic acid, oxalic acid, palmitic acid, pelargonic, pelargonic acid, pentadecylic acid, phosphoric acid, propionic acid, saccharin, salicylic acid, sorbic acid, stearic acid, succinic acid, sulfuric acid, tartaric acid, thiocyanic acid, thioglycolic acid, thiosulfuric acid, tosylic acid, trichloroacetic acid, tridecylic acid, trifluoroacetic acid, undecylenic acid, undecylic acid, valeric acid; triose sugars are selected from

D- or L-glyceraldehyde; tetrose sugars are selected from D- or L-erythrose or threose, and their deoxy counterparts; pentose sugars are selected from D- or L-arabinose, lyxose, ribose, xylose, ribulose, or xylulose, and their deoxy counterparts; hexose sugars are selected from D- or L-allose, altrose, glucose, mannose, gulose, idose, galactose, talose, psicose, fructose, sorbose, tagatose, and their deoxy counterparts; and amino acids are selected from alanine, arginine, asparagine, aspartic acid, cysteine, glutamine, glutamic acid, glycine, histidine, isoleucine, leucine, lysine, methionine, phenylalanine, proline, serine, threonine, tryptophan, tyrosine, valine, ornithine, citrulline, taurine, selenocysteine, pyrrolysine, aminobutyric acid, gamma-aminobutyric acid, 3-aminopropanoic acid, dehydroalanine, delta-carboxyglutamic acid, N-formylmethionine. In another embodiment, the tryptamine comprises a compound having the structure of Formula 5A or 5B:

(144) ##STR00005##

wherein each R is independently H, CH₃, CH₂CH₂CH₂, CH₂CH₂CH₂CH₂, (CH₂)₃, CH=CH, OCH₃, OC(=O)C₄ alkyl, CH₂OH, C₁-C₃ alkyl-OH, COOH, C₁-C₃ alkyl-COOH, or a pharmaceutically acceptable salt, hydrate, solvate, or tautomer thereof, or a combination thereof.

(145) In another embodiment, the tryptamine comprises a compound having the structure of:

(146) ##STR00006## ##STR00007## ##STR00008## ##STR00009## ##STR00010## ##STR00011## ##STR00012## ##STR00013## ##STR00014## ##STR00015## ##STR00016## ##STR00017##

(147) ##STR00018##

(148) In another embodiment, the erinacine comprises Erinacine A, Erinacine B, Erinacine C, Erinacine D, Erinacine E, Erinacine F, Erinacine G, Erinacine H, Erinacine I, Erinacine J, Erinacine K, Erinacine P, Erinacine Q, Erinacine R, Erinacol, other Erinacines or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof.

(149) In another embodiment, the erinacine comprises a compound having the structure of:

(150) ##STR00019## ##STR00020##

(151) In another embodiment, the hericenone comprises Hericenone A, Hericenone B, Hericenone C, Hericenone D, Hericenone E, Hericenone F, Hericenone G, Hericenone H, other hericenones, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof.

(152) In another embodiment, the hericenone comprises a compound having the structure of:

(153) ##STR00021##

(154) In another embodiment, the active compound is a compound isolated and identified in an extract from *Hericium erinaceus*.

(155) In another embodiment, the cannabinoid comprises Δ8-tetrahydrocannabinol (THC), Δ9-tetrahydrocannabinol, tetrahydrocannabinolic acid (THCA), cannabidiol (CBD), cannabidiolic acid (CBDA), cannabinol (CBN), cannabigerol (CBG), cannabichromene (CBC), cannabicyclol (CBL), cannabivarin (CBV), tetrahydrocannabivarin (THCV), cannabidivarin (CBDV), cannabichromevarin (CBCV), cannabigerovarin (CBGV), cannabigerol monomethyl ether (CBGM), cannabielsoin (CBE), cannabicitran (CBT), other cannabinoids, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof.

(156) In another embodiment, the cannabinoid comprises a compound having the structure of:

(157) ##STR00022##

(158) In another embodiment, the compositions described herein comprises one or more natural products such as aliphatic natural products, alkaloids, amino acids, anthranilic acid alkaloids, apiole, (+)-aromanderndrene, asarone, auronones, benzofuranoids, benzofurans, benzophenones, benzopyranoids, benzopyrans, benzotropolones, cis-α-bergamotene, trans-α-bergamotene, α-bisabolol, borneol, γ-cadinene, caffeic acid, camphor, carbohydrates, carotenoids, 3-carene, β-carbolines, trans-β-caryophyllene, catechins, chalcones, chavicol, chavicol, chromones, cineol, cinnamic acid, cinnamic aldehydes, cinnamic monolignols, conferyl alcohol, coniferyl alcohol, cordysin, coumarins, coumaric acid, coumaryl alcohol, cutin, depsides, depsidones, dillapiol, diterpenes, diterpenoids, γ-elemene, elemicin, eleutherosides, esterterpenoids, estragole, eudesman-3,7(11)-diene, β-eudesmol, γ-eudesmol, eugenol, trans-β-farnesene, ferulic acid, haramane, harmine, norharmine, harmol, α-humulene, β-

fenchol, 5-hydroxyferulic acid, flavonoids, glycopeptides, hydroxycinnamic acids, hydroxylated fatty acids, imidazole alkaloids, isoflavonoids, isoquinoline alkaloids, β -lactams, lignans, limonoids, R-limonene, (-)-linalool, lipids, lysine alkaloids, meroterpenoids, methyl eugenol, miscellaneous terpenoids, monoterpene indole alkaloids, monoterpene, myrcene, myristicin, nerolidol, nicotinic acid alkaloids, cis-ocimene, 1-octanol, ornithine alkaloids, otenoids, oxazole alkaloids, oxygen heterocycles, peptides, phellanderene, phenolics, phenylalanine alkaloids, phenylpropanoids, phenylpropanoids, phenylpropenes, perlolyrine, pinene, polycyclic aromatic natural products, polyketide alkaloids, polyketides, polypyrroles, pteridines, purines, putrescine alkaloids, pyrazine alkaloids, pyrimidines, pyrrole alkaloids, quassinoids, quinonemethides, quinones, quinoxaline alkaloids, resveratrol, trans-resveratrol, cis-sabinene hydrate, safrole, γ -selinene, semiochemicals, septide alkaloids, sesquiterpenes, sesquiterpenoids, simple aromatic natural products, sinapic acid, sinapyl alcohols, spermidine alkaloids, spermine alkaloids, sporopollenin, steroidal alkaloids, steroids, sterols, stilbenes, stilbenoids, suberin, tannins, terpenoid alkaloids, terpenoids, γ -terpinene, α -terpineol, terpinolene, tetraterpenoids, thiazole alkaloids, triterpenes, triterpenoids, tryptophan alkaloids, tyrosine alkaloids, umbelliferone, xanthenes, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof.

(159) In another embodiment, the compositions described herein comprises a phenethylamine or an amphetamine compound selected from: α -ethyl-3,4,5-trimethoxy-phenethylamine (AEM), 4-allyloxy-3,5-dimethoxy-phenethylamine (AL), 4-methylthio-2,5-dimethoxy-amphetamine (ALEPH), 4-ethylthio-2,5-dimethoxy-amphetamine (ALEPH-2), 4-isopropylthio-2,5-dimethoxy-amphetamine (ALEPH-4), 4-phenylthio-2,5-dimethoxy-amphetamine (ALEPH-6), 4-propylthio-2,5-dimethoxy-amphetamine (ALEPH-7), 2,5-dimethoxy- α -ethyl-4-methyl-phenethylamine (ARIADNE), 3,4-diethoxy-5-methoxy-phenethylamine (ASB), 4-butoxy-3,5-dimethoxy-phenethylamine (B), 2,5-dimethoxy-4,N-dimethyl-amphetamine (BEATRICE), 2,5-bismethylthio-4-methyl-amphetamine (BIS-TOM), 4-bromo-2,5,3-trimethoxy-phenethylamine (BOB), 2,5, β -trimethoxy-4-methyl-phenethylamine (BOD), 62-methoxy-3,4-methylenedioxy-phenethylamine (BOH), 2,5-dimethoxy- β -hydroxy-4-methyl-phenethylamine (BOHD), 3,4,5, β -tetramethoxy-phenethylamine (BOM), 4-bromo-3,5-dimethoxy-amphetamine (4-Br-3,5-DMA), 2-bromo-4,5-methylenedioxy-amphetamine (2-Br-4,5-MDA), 4-bromo-2,5-dimethoxy-phenethylamine (2C-B), 4-benzyloxy-3,5-dimethoxy-amphetamine (3C-BZ), 4-chloro-2,5-dimethoxy-phenethylamine (2C-C), 4-methyl-2,5-dimethoxy-phenethylamine (2C-D), 4-ethyl-2,5-dimethoxy-phenethylamine (2C-E), 4-ethoxy-3,5-dimethoxy-amphetamine (3C-E), 4-fluoro-2,5-dimethoxy-phenethylamine (2C-F), 3,4-dimethyl-2,5-dimethoxy-phenethylamine (2C-G), 3,4-trimethylene-2,5-dimethoxy-phenethylamine (2C-G-3), 3,4-tetramethylene-2,5-dimethoxy-phenethylamine (2C-G-4), 3,4-norbornyl-2,5-dimethoxy-phenethylamine (2C-G-5), 1,4-dimethoxynaphthyl-2-ethylamine (2C-G-N), 2,5-dimethoxy-phenethylamine (2C-H), 4-iodo-2,5-dimethoxy-phenethylamine (2C-I), 4-nitro-2,5-dimethoxy-phenethylamine (2C-N), 4-isopropoxy-2,5-dimethoxy-phenethylamine (2C-O-4), 4-propyl-2,5-dimethoxy-phenethylamine (2C-P), 4-cyclopropylmethoxy-3,5-dimethoxy-phenethylamine (CPM), 4-methylseleno-2,5-dimethoxy-phenethylamine (2C-SE), 4-methylthio-2,5-dimethoxy-phenethylamine (2C-T), 4-ethylthio-2,5-dimethoxy-phenethylamine (2C-T-2), 4-isopropylthio-2,5-dimethoxy-phenethylamine (2C-T-4), 4-isopropylthio-2,6-dimethoxy-phenethylamine (psi-2C-T-4), 4-propylthio-2,5-dimethoxy-phenethylamine (2C-T-7), 4-cyclopropylmethylthio-2,5-dimethoxy-phenethylamine (2C-T-8), 4-(t)-butylthio-2,5-dimethoxy-phenethylamine (2C-T-9), 4-(2-methoxyethylthio)-2,5-dimethoxy-phenethylamine (2C-T-13), 4-cyclopropylthio-2,5-dimethoxy-phenethylamine (2C-T-15), 4-(s)-butylthio-2,5-dimethoxy-phenethylamine (2C-T-17), 4-(2-fluoroethylthio)-2,5-dimethoxy-phenethylamine (2C-T-21), 4-trideuteromethyl-3,5-dimethoxy-phenethylamine (4-D), β,β -dideutero-3,4,5-trimethoxy-phenethylamine (β -D), 4-methyl-3,5-dimethoxy-phenethylamine (DESOXY), 2,4-dimethoxy-amphetamine (2,4-DMA), 2,5-dimethoxy-amphetamine (2,5-DMA), 3,4-dimethoxy-amphetamine (3,4-DMA), 2-(2,5-dimethoxy-4-methylphenyl)-cyclopropylamine (DMCPA), 3,4-dimethoxy- β -hydroxy-phenethylamine (DME), 2,5-dimethoxy-3,4-methylenedioxy-amphetamine (DMMDA), 2,3-dimethoxy-4,5-methylenedioxy-amphetamine (DMMDA-2), 3,4-dimethoxy-phenethylamine (DMPEA), 4-amyl-2,5-dimethoxy-amphetamine (DOAM), 4-bromo-2,5-dimethoxy-amphetamine (DOB), 4-butyl-2,5-dimethoxy-amphetamine (DOBU), 4-chloro-2,5-dimethoxy-

amphetamine (DOC), 4-(2-fluoroethyl)-2,5-dimethoxy-amphetamine (DOEF), 4-ethyl-2,5-dimethoxy-amphetamine (DOET), 4-iodo-2,5-dimethoxy-amphetamine (DOI), 4-methyl-2,5-dimethoxy-amphetamine (DOM (STP)), 4-methyl-2,6-dimethoxy-amphetamine (psi-DOM), 4-nitro-2,5-dimethoxy-amphetamine (DON), 4-propyl-2,5-dimethoxy-amphetamine (DOPR), 4-ethoxy-3,5-dimethoxy-phenethylamine (E), 2,4,5-triethoxy-amphetamine (EEE), 2,4-diethoxy-5-methoxy-amphetamine (EEM), 2,5-diethoxy-4-methoxy-amphetamine (EME), 2-ethoxy-4,5-dimethoxy-amphetamine (EMM), N, α -diethyl-3,4-methylenedioxy-phenethylamine (ETHYL-J), N-ethyl- α -propyl-3,4-methylenedioxy-phenethylamine (ETHYL-K), benzofuran-2-methyl-5-methoxy-6-(2-aminopropane) (F-2), benzofuran-2,2-dimethyl-5-methoxy-6-(2-aminopropane) (F-22), N-hydroxy-N-methyl-3,4-methylenedioxy-amphetamine (FLEA), 3,4-trimethylene-2,5-dimethoxy-amphetamine (G-3), 3,4-tetramethylene-2,5-dimethoxy-amphetamine (G-4), 3,4-norbornyl-2,5-dimethoxy-amphetamine (G-5), 3,4-dimethyl-2,5-dimethoxy-amphetamine (GANESHA), 1,4-dimethoxynaphthyl-2-isopropylamine (G-N), 2,5-dimethoxy-N-hydroxy-4-ethylthio-phenethylamine (HOT-2), 2,5-dimethoxy-N-hydroxy-4-(n)-propylthio-phenethylamine (HOT-7), 2,5-dimethoxy-N-hydroxy-4-(s)-butylthio-phenethylamine (HOT-17), 2,5-dimethoxy-N,N-dimethyl-4-iodo-amphetamine (IDNNA), 2,3,4-trimethoxy-phenethylamine (IM), 3,5-dimethoxy-4-isopropoxy-phenethylamine (IP), 5-ethoxy-2-methoxy-4-methyl-amphetamine (IRIS), α -ethyl-3,4-methylenedioxy-phenethylamine (J), 3-methoxy-4,5-methylenedioxy-phenethylamine (LOPHOPHINE), 3,4,5-trimethoxy-phenethylamine (M), 4-methoxy-amphetamine (4-MA), 2,N-dimethyl-4,5-methylenedioxy-amphetamine (MADAM-6), 3,5-dimethoxy-4-methylthio-phenethylamine (MAL), 3,4-methylenedioxy-amphetamine (MDA), N-allyl-3,4-methylenedioxy-amphetamine (MDAL), N-butyl-3,4-methylenedioxy-amphetamine (MDBU), N-benzyl-3,4-methylenedioxy-amphetamine (MDBZ), N-Cyclopropylmethyl-3,4-methylenedioxy-amphetamine (MDCPM), N,N-dimethyl-3,4-methylenedioxy-amphetamine (MDDM), N-ethyl-3,4-methylenedioxy-amphetamine (MDE), N-(2-hydroxyethyl)-3,4-methylenedioxy-amphetamine (MDHOET), N-isopropyl-3,4-methylenedioxy-amphetamine (MDIP), N-methyl-3,4-methylenedioxy-amphetamine (MDMA), N-methyl-3,4-ethylenedioxy-amphetamine (MDMC), N-methoxy-3,4-methylenedioxy-amphetamine (MDMEO), N-(2-methoxyethyl)-3,4-methylenedioxy-amphetamine (MDMEOET), α,α -N-trimethyl-3,4-methylenedioxy-phenethylamine (MDMP), N-hydroxy-3,4-methylenedioxy-amphetamine (MDOH), 3,4-methylenedioxy-phenethylamine (MDPEA), α,α -dimethyl-3,4-methylenedioxy-phenethylamine (MDPH), N-propargyl-3,4-methylenedioxy-amphetamine (MDPL), N-propyl-3,4-methylenedioxy-amphetamine (MDPR), 3,4-dimethoxy-5-ethoxy-phenethylamine (ME), 3-methoxy-4,5-ethylenedioxy-amphetamine (MEDA), 2-methoxy-4,5-diethoxy-amphetamine (MEE), 2,5-dimethoxy-4-ethoxy-amphetamine (MEM), 3-methoxy-4-ethoxy-phenethylamine (MEPEA), 5-bromo-2,4-dimethoxy-amphetamine (META-DOB), 5-methylthio-2,4-dimethoxy-amphetamine (META-DOT), N-methyl-2,5-dimethoxy-amphetamine (METHYL-DMA), 4-bromo-2,5-dimethoxy-N-methyl-amphetamine (METHYL-DOB), N-methyl- α -ethyl-3,4-methylenedioxy-phenethylamine (METHYL-J), N-methyl- α -propyl-3,4-methylenedioxy-phenethylamine (METHYL-K), N-methyl-4-methoxy-amphetamine (METHYL-MA), N-methyl-2-methoxy-4,5-methylenedioxy-amphetamine (METHYL-MMDA-2), 3-methoxy-4,5-methylenedioxy-amphetamine (MMDA), 2-methoxy-4,5-methylenedioxy-amphetamine (MMDA-2), 2-methoxy-3,4-methylenedioxy-amphetamine (MMDA-3a), 4-methoxy-2,3-methylenedioxy-amphetamine (MMDA-3b), 2,4-dimethoxy-5-ethoxy-amphetamine (MME), 3,4-dimethoxy-5-propoxy-phenethylamine (MP), 2,5-dimethoxy-4-propoxy-amphetamine (MPM), 2-methylthio-4,5-dimethoxy-amphetamine (ORTHO-DOT), 3,5-dimethoxy-4-propoxy-phenethylamine (P), 3,5-dimethoxy-4-phenethyloxy-phenethylamine (PE), phenethylamine (PEA), 4-propynyloxy-3,5-dimethoxy-phenethylamine (PROPYNYL), 3,5-diethoxy-4-methoxy-phenethylamine (SB), 2,3,4,5-Tetramethoxy-amphetamine (TA), 4-ethoxy-3-ethylthio-5-methoxy-phenethylamine (3-TASB), 3-ethoxy-4-ethylthio-5-methoxy-phenethylamine (4-TASB), 3,4-diethoxy-5-methylthio-phenethylamine (5-TASB), 4-thiobutoxy-3,5-dimethoxy-phenethylamine (TB), 4-ethoxy-5-methoxy-3-methylthio-phenethylamine (3-TE), 3,5-dimethoxy-4-ethylthio-phenethylamine (4-TE), 2-methylthio-3,4-dimethoxy-phenethylamine (2-TIM), 3-methylthio-2,4-dimethoxy-phenethylamine (3-TIM), 4-methylthio-2,3-dimethoxy-phenethylamine (4-TIM), 3-methylthio-4,5-dimethoxy-phenethylamine (3-TM), 4-methylthio-3,5-dimethoxy-phenethylamine (4-TM), 3,4,5-trimethoxy-amphetamine (TMA),

2,4,5-trimethoxy-amphetamine (TMA-2), 2,3,4-trimethoxy-amphetamine (TMA-3), 2,3,5-trimethoxy-amphetamine (TMA-4), 2,3,6-trimethoxy-amphetamine (TMA-5), 2,4,6-trimethoxy-amphetamine (TMA-6), 4,5-dimethoxy-3-ethylthio-phenethylamine (3-TME), 3-ethoxy-5-methoxy-4-methylthio-phenethylamine (4-TME), 3-ethoxy-4-methoxy-5-methylthio-phenethylamine (5-TME), 2-methylthio-3,4-methylenedioxy-amphetamine (2T-MMDA-3a), 4,5-thiomethyleneoxy-2-methoxy-amphetamine (4T-MMDA-2), 2,4,5-trimethoxy-phenethylamine (TMPEA), 4-ethyl-5-methoxy-2-methylthio-amphetamine (2-TOET), 4-ethyl-2-methoxy-5-methylthio-amphetamine (5-TOET), 5-methoxy-4-methyl-2-methylthio-amphetamine (2-TOM), 2-methoxy-4-methyl-5-methylthio-amphetamine (5-TOM), 2-methoxy-4-methyl-5-methylsulfinyl-amphetamine (TOMSO), 4-propylthio-3,5-dimethoxy-phenethylamine (TP), 3,4,5-triethoxy-phenethylamine (TRIS), 3-ethoxy-5-ethylthio-4-methoxy-phenethylamine (3-TSB), 3,5-diethoxy-4-methylthio-phenethylamine (4-TSB), 4,5-diethoxy-3-ethylthio-phenethylamine (3-T-TRIS), 3,5-diethoxy-4-ethylthio-phenethylamine (4-T-TRIS), (R)-2,5-dimethoxy-4-iodoamphetamine, or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof, or a combination thereof. See Shulgin and Shulgin, *PIHKAL: A Chemical Love Story*, Transform Press (1994), which is incorporated by reference herein for the specific teachings thereof. In some embodiments, the amphetamine may be (R)-2,5-dimethoxy-4-iodoamphetamine or a pharmaceutically acceptable salt, hydrate, solvate, prodrug, stereoisomer, or tautomer thereof. (R)-2,5-dimethoxy-4-iodoamphetamine (i.e., 2C-H) is structurally similar to the popular psychedelic drug 2C-B (which is similar to ecstasy and MDMA), but it does not itself have any psychoactive effects. It was found to activate the 5-HT_{2A} receptor and prevent and reverse inflammation in the lungs. Flanagan and Nichols, *Int. Review of Psychiatry*, 30 (4): 363-375 (2018). In another embodiment, the amphetamine comprises (R)-2,5-dimethoxy-4-iodoamphetamine, having the structure:

(161) It will be apparent to one of ordinary skill in the relevant art that suitable modifications and adaptations to the compositions, formulations, methods, processes, and applications described herein can be made without departing from the scope of any embodiments or aspects thereof. The compositions and methods provided are exemplary and are not intended to limit the scope of any of the specified embodiments. All the various embodiments, aspects, and options disclosed herein can be combined in any variations or iterations. The scope of the compositions, formulations, methods, and processes described herein include all actual or potential combinations of embodiments, aspects, options, examples, preferences, or steps described herein. The exemplary compositions, formulations, and methods described herein may omit any component or step described herein, substitute any component or step described herein, or include any component or step described elsewhere herein. The ratios of the mass of any component of any of the compositions or formulations disclosed herein to the mass of any other component in the formulation or to the total mass of the other components in the formulation are hereby disclosed as if they were expressly disclosed. Should the meaning of any terms in any of the patents or publications incorporated by reference conflict with the meaning of the terms used in this disclosure, the meanings of the terms or phrases in this disclosure are controlling. Furthermore, the foregoing description discloses exemplary embodiments. All patents and publications cited herein are incorporated by reference herein for the specific teachings thereof.

EXAMPLES

Example 1

(162) *Hericium erinaceus* Extracts

(163) Extracts were prepared from *Hericium erinaceus* mycelium or fruiting bodies colonized on rice or rice and oat hull fiber for various time periods.

(164) *H. erinaceus* was cultivated, frozen and ground and extracted in water for 2 h at room temperature. The extract was filtered through Whatman filter via gravity. The filtrate was lyophilized to dryness.

(165) Ethanol extracts were made from the same *H. erinaceus* mycelium. The mycelium was frozen, but not ground, and extracted in 70% ethanol for 1 week at room temperature. The extract was filtered through an 80-mesh sieve and lyophilized to dryness.

(166) A portion of the ethanol extract was rotovapped to dryness and the residue resuspended in 1:1 water: ethyl acetate. The water/ethyl acetate extract was washed 3 times with ethyl acetate, the combined organic fractions dried over MgSO_4 , filtered, rotovapped, and then lyophilized.

Example 2

(167) Experiments were conducted to evaluate the neurotrophic effects of several purified tryptamines, *H. erinaceum* extracts, and the tryptamines combined with selected extracts of *H. erinaceum*. The tryptamines, baecystin, norbaecystin, and norpsilocin, were evaluated at final concentrations of 0.3 $\mu\text{g/mL}$, 1 $\mu\text{g/mL}$, 3 $\mu\text{g/mL}$, and 10 $\mu\text{g/mL}$. The experiments analyzed the *H. erinaceum* growth medium (rice or rice and oat hull fiber), the days of cultivation, the extract solvent (water, ethanol, or ethyl acetate), and the final concentration of the extract (31.3 $\mu\text{g/mL}$, 62.5 $\mu\text{g/mL}$, 125 $\mu\text{g/mL}$ or 250 $\mu\text{g/mL}$). Finally, combinations of the three tryptamines and representative *H. erinaceum* extracts were combined and evaluated.

(168) The test compositions are shown in Table 4.

Example 3

(186) Neurite Outgrowth 4 (NO-4) produced statistically significant hits for several HE extracts as well
 as each psilocybin analog tested in the assay. Subsequently, Neurite Outgrowth 5 tested for potential
 synergistic effects from combining HE extracts with pure compounds. The treatments were comparable

to those of NeuroFit2, aiming to determine if potential synergistic effects identified by NeuroFit were reproducible in-house.

(187) PC12 cells were grown to confluency in a 96 well plate, starved, and treated with HE 98d EtOAc mycelium extract, psilocybin analogs, or HE-analog stacks (FIG. 6). Culture media was refreshed after day 7. Images were taken at days 5, 7, and 11 and were then analyzed for neurite length via ImageJ. Images were taken at 20× and focused on the most prominent instances of neurite outgrowth in each well.

(188) Generally, the data from NO-5 largely reflect those of NO-4, and once again, statistically significant hits were identified for HE and psilocybin analogs. At all time points, the 31.25 µg/mL HE extracts produced the strongest neurite outgrowth, having the greatest mean neurite length of any statistically significant treatment (FIGS. 7, 8, 9). Day 7 produced the strongest neurite outgrowth as all treatments tended have the longest mean neurite length at this time point (FIG. 10).

(189) As observed with the previous assay, NO-5 provides further validation of in-house cell culture capabilities and demonstrates that the neurite outgrowth assay can be simplified by applying compounds directly to PC12 cells. Refreshing culture media did not produce a noticeable neurite length benefit to PC12 cells, as the day 11 treatment still appeared to have some reduction in neurite length when compared to day 7. However, at day 11 statistically significant hits were produced for all three psilocybin analogs.

(190) Although the assay aimed to explore potential synergistic effects of combining HE and psilocybin analogs, this was not clearly observed. This is largely due to the 31.25 µg/mL HE extract outperforming any other individual or stacked treatment at days 5, 7, and 11. In this assay, the 31.25 µg/mL HE extract produced strong neurite outgrowth at a lower dosage than previously observed, likely due to this fresh extract being more concentrated. Overall, these data provide increased confidence in the role of lion's mane extracts and psilocybin analogs in inducing neurite outgrowth both in-house and from third party assays.

(191) 1321N1 human brain astrocytoma cells are known to excrete neurologically beneficial compounds when stimulated with neurotrophic compounds and fungal extracts including lion's mane (Mori et al., *Biological and Pharmaceutical Bulletin*, 9:1727-1732 (2008)). While some fungi have well established mechanisms by which they benefit neurological health, little is known about the role of psilocybin analogs specifically. Generally following the protocol of Mori et al., 2008, 1321N1 human astrocytoma cells were treated with psilocybin analogs, and conditioned media was collected and applied to differentiated rat pheochromocytoma PC12 cells to determine the resulting impact on neurite outgrowth. Conditioned media from baeocystin, norbaeocystin, and norpsilocin were found to induce neurite outgrowth in PC12 cells, suggesting that psilocybin analogs induce the expression and secretion of neurologically beneficial compounds, potentially including nerve growth factor (NGF) (FIG. 11). When PC12 cells were directly treated with psilocybin analogs, comparable effects were observed at several time points (FIG. 9).

Example 4

(192) Mitogen-activated protein kinases (MAPKs) provide a wide-ranging signaling cascade that allow cells to quickly respond to biotic and abiotic stimuli. The objective of this project was to determine if HE extracts from Fungi Perfecti (FP) impact MAPKs (e.g., influence the expression and phosphorylation of various MAPKs—notably JNK, c-Jun, and c-fos—to promote nerve growth factor (NGF) expression). Here, four FP extracts were tested at three concentrations each (Table 11). These extracts were tested against five MAPKs: c-Jun N-terminal kinase 1-3 (JNK1, JNK2, JNK3), Rho Associated Coiled-Coil Containing Protein Kinases 1 and 2 (ROCK1, ROCK2), and tropomyosin receptor kinase B (TRKB). Collectively, these MAPKs are major players in neural health, influencing neurogenesis, neural growth and differentiation, and neurodegenerative diseases.

(193) TABLE-US-00012 TABLE 11 Concentrations of FP HE extracts tested for binding to MAPK targets

Concentrations Tested	Extract (µg/mL)
HD HE Extract	62.5 125 250
HE EtOAc	62.5 125 250
HE Water Wash	62.5 125 250
HD Powder	31.25 62.5 125

HD: Host Defense® Lion's Mane (*Hericium erinaceus*) product (Fungi Perfecti)

(194) While several potential MAPK hits were identified for all extracts, the Host Defense® (Fungi

Perfecti; “HD”) HE EtOH and HE EtOAc extracts elicited the most pronounced impacts, particularly the latter extract (FIG. 12). (Note: based on the % Control kinase binding calculation, stronger hits are represented by lower values.)

(195) Interestingly, the top two hits included the HE EtOAc extract on JNK3 and the HD HE EtOH extract with ROCK1 (Table 12). This suggests that the extraction method may play a significant role in the ways in which neural health is impacted. While the strongest MAPK impact was found on JNK3 with the EtOAc extract, the EtOH extract did not produce a strong impact on this specific kinase. This may be due to the EtOAc extraction method producing the strongest detectable erinacine content.

(196) TABLE-US-00013 TABLE 12 Top ten hits identified in the MAPK binding assay DiscoverX

Entrez Compound	Compound	Gene	Gene	Percent	Conc.	Name	Symbol	Symbol	Control (µg/mL)
HE	EtOAc	JNK3	MAPK10	54	250	HD Extract	ROCK1	ROCK1	65
HE	EtOAc	JNK2	MAPK9	70	250	HE EtOAc	JNK3	MAPK10	74
HE	EtOAc	ROCK1	ROCK1	73	250	HD Extract	ROCK2	ROCK2	74
HE	EtOAc	JNK1	MAPK8	74	250	HE EtOAc	ROCK2	ROCK2	76
HE	EtOAc	JNK2	MAPK9	78	62.5	HD: Host Defense®	Lion's Mane (<i>Hericium erinaceus</i>)	product (Fungi Perfecti)	

(197) Collectively, MAPK binding data suggest that FP HE extracts impact neural health on several broad levels. Of the top MAPKs impacted by HE extracts, the JNKs play a role in cell degeneration, while the ROCKs play a role in cell survival. Accordingly, FP HE extracts may play an immunomodulatory role in influencing immune system homeostasis (FIG. 13).

(198) Contrary to results from neurite outgrowth cellular assays, higher extract concentrations in MAPK binding assays tended to elicit a stronger response. At 250 µg/mL, the EtOAc had a strong impact on the binding of TRKB, a well-characterized, high affinity receptor of brain-derived neurotrophic factor (BDNF), further broadening the scope at which FP HE extracts modulate neural activity.

(199) Ultimately, findings from the MAPK binding assays strengthen the mechanisms by which FP HE extracts influence neurogenic activity. In addition to morphology-based cellular assays in several cell lines, there is now evidence that FP extracts are driving neurite growth through diverse, classical neurogenic pathways related to neurotrophic factors including both NGF and BDNF.

(200) The ability of psilocybin analogs to stimulate neurite outgrowth is demonstrated in several cell models. Accordingly, preliminary research has started to reveal the mechanisms by which psilocybin analogs may confer neurotrophic benefits that facilitate neurite outgrowth. Human 1321N1 brain cells treated with norbaeocystin have increased expression of NGF protein when compared to a vehicle control (FIG. 16).

Example 5

(201) Microdosing with dried psilocybin mushrooms (presumption: *Psilocybe cubensis*) in humans was used to study the effects of psilocybin mushrooms on depression, anxiety, and mood. The data was collected using anonymous self-reporting through a phone app (microdose.me). 16% of respondents reported using a low dose (<0.10 grams), 72% of respondents reported using a medium dose (0.10-0.30 grams), and 12% of respondents reported using a high dose (>30 grams). The large study sample included 8703 participants at baseline with 3,486 psilocybin users, 447 LSD users, 117 other (46.5% were microdosers). A subsample of the large sample included 159 participants that started microdosing psilocybin with 1-month FU (28% female) and 83 participants that were non-microdosers (19% female). Among microdosers, 22% dosed <2×/wk, 47% dosed 2-4×/wk, and 29% dosed >4×/wk. Microdosing was correlated with decreased depression and anxiety as compared to non-microdosers (FIG. 17) and increased positive mood as compared to non-microdosers (FIG. 18). Stacking psilocybin mushrooms with Lion's Mane mushrooms did not increase the effect on depression or positive mood as compared to psilocybin mushrooms alone (FIG. 19). Positive effects were equivalent among those who stacked with Lion's Mane (with and without niacin) and those who did not stack. However, the data was collected after 4 weeks of administration and data has shown that Lion's Mane, when used in clinical studies, increased cognition at 8, 12 and 16 weeks. Therefore, the psilocybin and Lion's Mane stack may work synergistically to treat depression and anxiety and increase positive mood when used in combination for greater than 4 weeks. Overall, microdosing psilocybin was associated with reduced depression and improved mood at 1 month. Effects for depression were in the medium range: $\eta^2=0.05/d=0.5$, whereas

SSRIs are in the $d=0.3$ range. It is notable that this is a non-clinical population. Effects for positive mood were large— $\eta^2=0.13/d=0.8$.

Example 6

(202) *Pochonia chlamydosporia* is a fungal egg parasite of root-knot and cyst nematodes. It colonizes in the roots of several plant species and can induce plant defense mechanisms and local resistance in fungal-nematode-plant interactions. It has also been shown that *Pochonia chlamydosporia* can produce ketamine. Ferreira et al., *Parasites & Vectors*, 13:527 (2020). *Pochonia chlamydosporia* will be cocultured with psilocybin-containing mushroom mycelia. Alternatively, *Pochonia chlamydosporia* will be cultured alone on a substrate such as a rice substrate and its mycelium will be inactivated or killed. Then, psilocybin-containing mushrooms will be cultivated upon the inactivated, ketamine producing mycelium and substrate. These growing conditions may produce novel alkaloids or medicines that may be used for treating or preventing neuronal injuries, neurodegeneration, neurological diseases, congenital or organic cognitive impairment, learning disabilities, autism spectrum disorder, psychiatric and mood disorders, cognitive enhancement, physical or motor neuron enhancement, or general improvement of mental health, inter alia.

(203) The cultivated *Pochonia chlamydosporia* and/or psilocybin-containing mushrooms are frozen and ground and extracted in water for 2 h at room temperature. The extract is filtered through Whatman filter via gravity. The filtrate is lyophilized to dryness. Ethanol extracts are made from the same mycelium. The mycelium is frozen, but not ground, and extracted in 70% ethanol for 1 week at room temperature. The extract is filtered through an 80-mesh sieve and lyophilized to dryness. A portion of the ethanol extract is rotovapped to dryness and the residue is resuspended in 1:1 water: ethyl acetate. The water/ethyl acetate extract is washed 3 times with ethyl acetate, the combined organic fractions dried over MgSO_4 , filtered, rotovapped, and then lyophilized.

(204) Additionally, *Pochonia* species and *Psilocybe* species (or other psilocybin producing fungi) can be co-cultured together in fermentation or on solid (“semi-solid media”) to create a quorum of two organisms whose active principle ingredients—such as ketamine or ketamine analogs from *Pochonia* and psilocybin/psilocin and psilocybin/psilocin analogues—may be expressed, and subsequently harvested to create a unique combination.

(205) At least 30 mg of psilocybin (0.5-1 mg/kg) is a strong dose, while 70 mg of ketamine 1.5 mg/kg (0.5-2.0 mg/kg) is a similarly strong psychedelic dose.

(206) Experiments are conducted to evaluate the neurotrophic effects of several purified tryptamines, *H. erinaceum* extracts combined with selected extracts of *Pochonia chlamydosporia*. The experiments analyze the *Pochonia chlamydosporia* growth medium (rice, oat, straw, sawdust, or combinations thereof), the days of cultivation, the extract solvent (water, ethanol, or ethyl acetate), and the final concentration of the extract. The following compositions are tested (Table 13):

(207) TABLE-US-00014 TABLE 13 Test Compositions *Pochonia chlamydosporia* mycelium, rice 12 d, H.sub.2O *Pochonia chlamydosporia* mycelium, oat 12 d, H.sub.2O *Pochonia chlamydosporia* mycelium, straw 12 d, H.sub.2O *Pochonia chlamydosporia* mycelium, sawdust 12 d, H.sub.2O *Pochonia chlamydosporia* mycelium, rice 12 d, EtOH *Pochonia chlamydosporia* mycelium, oat 12 d, EtOH *Pochonia chlamydosporia* mycelium, straw 12 d, EtOH *Pochonia chlamydosporia* mycelium, sawdust 12 d, EtOH *Pochonia chlamydosporia* mycelium, rice 12 d, EtOAc *Pochonia chlamydosporia* mycelium, oat 12 d, EtOAc *Pochonia chlamydosporia* mycelium, straw 12 d, EtOAc *Pochonia chlamydosporia* mycelium, sawdust 12 d, EtOAc *Pochonia chlamydosporia* mycelium, rice 21 d, H.sub.2O *Pochonia chlamydosporia* mycelium, oat 21 d, H.sub.2O *Pochonia chlamydosporia* mycelium, straw 21 d, H.sub.2O *Pochonia chlamydosporia* mycelium, sawdust 21 d, H.sub.2O *Pochonia chlamydosporia* mycelium, rice 21 d, EtOH *Pochonia chlamydosporia* mycelium, oat 21 d, EtOH *Pochonia chlamydosporia* mycelium, straw 21 d, EtOH *Pochonia chlamydosporia* mycelium, sawdust 21 d, EtOH *Pochonia chlamydosporia* mycelium, rice 21 d, EtOAc *Pochonia chlamydosporia* mycelium, oat 21 d, EtOAc *Pochonia chlamydosporia* mycelium, straw 21 d, EtOAc *Pochonia chlamydosporia* mycelium, sawdust 21 d, EtOAc *Pochonia chlamydosporia* mycelium, rice 98 d, H.sub.2O *Pochonia chlamydosporia* mycelium, oat 98 d, H.sub.2O *Pochonia chlamydosporia* mycelium, straw 98 d, H.sub.2O *Pochonia chlamydosporia* mycelium, sawdust 98 d, H.sub.2O

The composition may be used in a microdosing regimen.

Example 7

(209) This research has revealed distinct roles of psilocybin analogs in benefiting neurological health. ELISA assays in human 1321N1 brain cells found that norbaecystin induces the expression of nerve growth factor (NGF) protein while norpsilocin induces the expression of the anti-inflammatory cytokine IL-10. Moreover, Ly et al. found that psychedelic compounds are unable to induce the expression of BDNF transcript, while we have observed strong induction of BDNF transcript by lion's mane extract. See Ly et al., "Psychedelics Promote Structural and Functional Neural Plasticity," *Cell Rep.* 23:3170-3182 (2018). Collectively, this suggests that the combination of psilocybin analogs with lion's mane benefits brain health in diverse and complementary mechanisms.

(210) Neuroinflammatory consequences of COVID-19 infection, and that of other neuroinflammatory viruses, causes a wide range of negative effects on human health and mental well-being. Since health and mental health are inextricably interrelated, there is a great need to resolve adverse effects to the nervous system in general. In addition, activation of 5-HT_{2A} receptors produces potent anti-inflammatory effects in animal models and are believed to block TNF-α induced inflammation. See Flanagan and Nichols, "Psychedelics and anti-inflammatory agents" *Inter. Rev. Psychiatry* 30 (4): 363-375 (2018). Thus, the compositions described herein may have synergistic benefits in reducing inflammation, increasing neurogenesis, and ameliorating mental health disorders or issues.

(211) Further, high doses of tryptamines, particularly aeruginascin, 4-hydroxy-N,N,N-trimethyltryptamine, or bufotenidine, maybe useful for anesthetic or neuroanesthetic applications. These compounds are associated with the phenomenon "Wood Lover Paralysis," a temporary muscle weakness or paralysis that sometimes occurs several hours after consuming certain types of psilocybin mushrooms grown on decaying wood.

(212) The unique combination, or norpsilocin alone, will have a significant impact on the improvement of mental health and resolution or amelioration of a wide range of mental diseases. Such improvements include increase in intelligence, cognition, mental state of being, mood, overcoming depression, overcoming PTSD, enhancing coordination, hearing, seeing or vision. Moreover, the combinations in

this invention may positively impact and improve the neurological health of those suffering from Alzheimer's, multiple sclerosis, and other diseases that are detrimental to human health as a consequence of neuroinflammation.

(213) The methods and compositions that includes the combination of norbaeocystin to induce the expression of nerve growth factor (NGF) protein and norpsilocin to induce the expression of the anti-inflammatory cytokine IL-10.

(214) The psilocybin analogs described herein have unique binding characteristics with 5-HT receptors and can work synergistically to have greater than the expected cumulative effects.

Claims

1. A method for treating or ameliorating one or more symptoms of a serotonin (5-hydroxytryptamine, 5-HT) receptor disorder in a subject in need thereof, the method comprising: administering to the subject a pharmaceutical dosage form comprising: 0.01 mg to 10 mg of psilocin, psilocybin, salts thereof, or combinations thereof; and one or more pharmaceutically acceptable excipients selected from carriers, fillers, binders, disintegrants, preservatives, or antioxidants; wherein the serotonin (5-hydroxytryptamine, 5-HT) receptor disorder comprises depression, anxiety, major depressive disorder, treatment resistant depression, persistent depression, manic depression, bipolar disorder, depressive psychosis, perinatal depression, premenstrual dysphoric disorder, seasonal depressions, situational depression, panic disorder, obsessive compulsive disorder, post-traumatic stress disorder, attention deficit/hyperactivity disorder, substance abuse disorders or combinations thereof.
2. The method of claim 1, wherein the pharmaceutical dosage form comprises 0.01 mg, 0.02 mg, 0.03 mg, 0.04 mg, 0.05 mg, 0.06 mg, 0.07 mg, 0.08 mg, 0.09 mg, 0.1 mg, 0.2 mg, 0.3 mg, 0.4 mg, 0.5 mg, 0.6 mg, 0.7 mg, 0.8 mg, 0.9 mg, 1 mg, 2 mg, 3 mg, 4 mg, 5 mg, 6 mg, 7 mg, 8 mg, 9 mg, or 10 mg of psilocybin or psilocin.
3. The method of claim 1, wherein the wherein the psilocin, psilocybin, salts thereof, or combinations thereof are: (a) pure compounds; (b) from mushroom species comprising psilocybin, psilocin, salts thereof, or combinations thereof; or (c) from extracts of mushroom species comprising psilocybin, psilocin, salts thereof; combinations thereof.
4. The method of claim 1, wherein the pharmaceutical dosage form further comprises 10 µg to 200 mg of niacin.
5. The method of claim 1 further comprising acidifying agents, alkalizing agents, antifoaming agents, sweetening agents, buffering agents, chelating agents, coating agents, emulsifying agents, solubilizing agents, flavoring agents, coloring agents, humectants, or a combination thereof.
6. The method of claim 1, wherein the administration is at a regular interval until the subject in need thereof does not require administration.
7. The method of claim 1, wherein the pharmaceutical dosage form is administered 1 to 6 times per day.
8. The method of claim 1, wherein the psilocybin or psilocin bind to a neurotropin receptor.
9. The method of claim 1, wherein the pharmaceutical dosage form releases one or more neurotropins.
10. The method of claim 1, wherein the pharmaceutical dosage form enhances neuronal plasticity.
11. A method for treating or ameliorating one or more symptoms of a serotonin (5-hydroxytryptamine, 5-HT) receptor disorder in a subject in need thereof, the method comprising: administering to the subject a pharmaceutical dosage form comprising: 0.1 mg to 10 mg of psilocin, psilocybin, salts thereof, or combinations thereof; and one or more pharmaceutically acceptable excipients selected from carriers, fillers, binders, disintegrants, preservatives, or antioxidants; wherein the serotonin (5-hydroxytryptamine, 5-HT) receptor disorder comprises depression, anxiety, major depressive disorder, treatment resistant depression, persistent depression, manic depression, bipolar disorder, depressive psychosis, perinatal depression, premenstrual dysphoric disorder, seasonal depressions, situational depression, panic disorder, obsessive compulsive disorder, post-traumatic stress disorder, attention deficit/hyperactivity disorder, substance abuse disorders or combinations thereof.
12. The method of claim 11, wherein the wherein the psilocin, psilocybin, salts thereof, or combinations thereof are: (a) pure compounds; (b) from mushroom species comprising psilocybin, psilocin, salts

thereof, or combinations thereof; or (c) from extracts of mushroom species comprising psilocybin, psilocin, salts thereof; combinations thereof.

13. The method of claim 11, wherein the pharmaceutical dosage form further comprises 10 µg to 200 mg of niacin.

14. The method of claim 11, further comprising acidifying agents, alkalizing agents, antifoaming agents, sweetening agents, buffering agents, chelating agents, coating agents, emulsifying agents, solubilizing agents, flavoring agents, coloring agents, humectants, or a combination thereof.

15. The method of claim 11, wherein the administration is at a regular interval until the subject in need thereof does not require administration.

16. The method of claim 11, wherein the pharmaceutical dosage form is administered 1 to 6 times per day.

17. The method of claim 11, wherein the psilocybin or psilocin bind to a neurotrophin receptor.

18. The method of claim 11, wherein the pharmaceutical dosage form releases one or more neurotrophins.
