(57) **ABSTRACT**

The present invention relates to a body-worn personal belongings storage device that allows at least one personal belonging to be stored within a waterproof body of the device. In one embodiment, the body is comprised of at least two compartments that allow for personal belongings to be separated. The device attaches around the body of the user via a strap that may have a first fastener and a second fastener that allow the strap to be adjusted to the desired tightness around the body of the user.

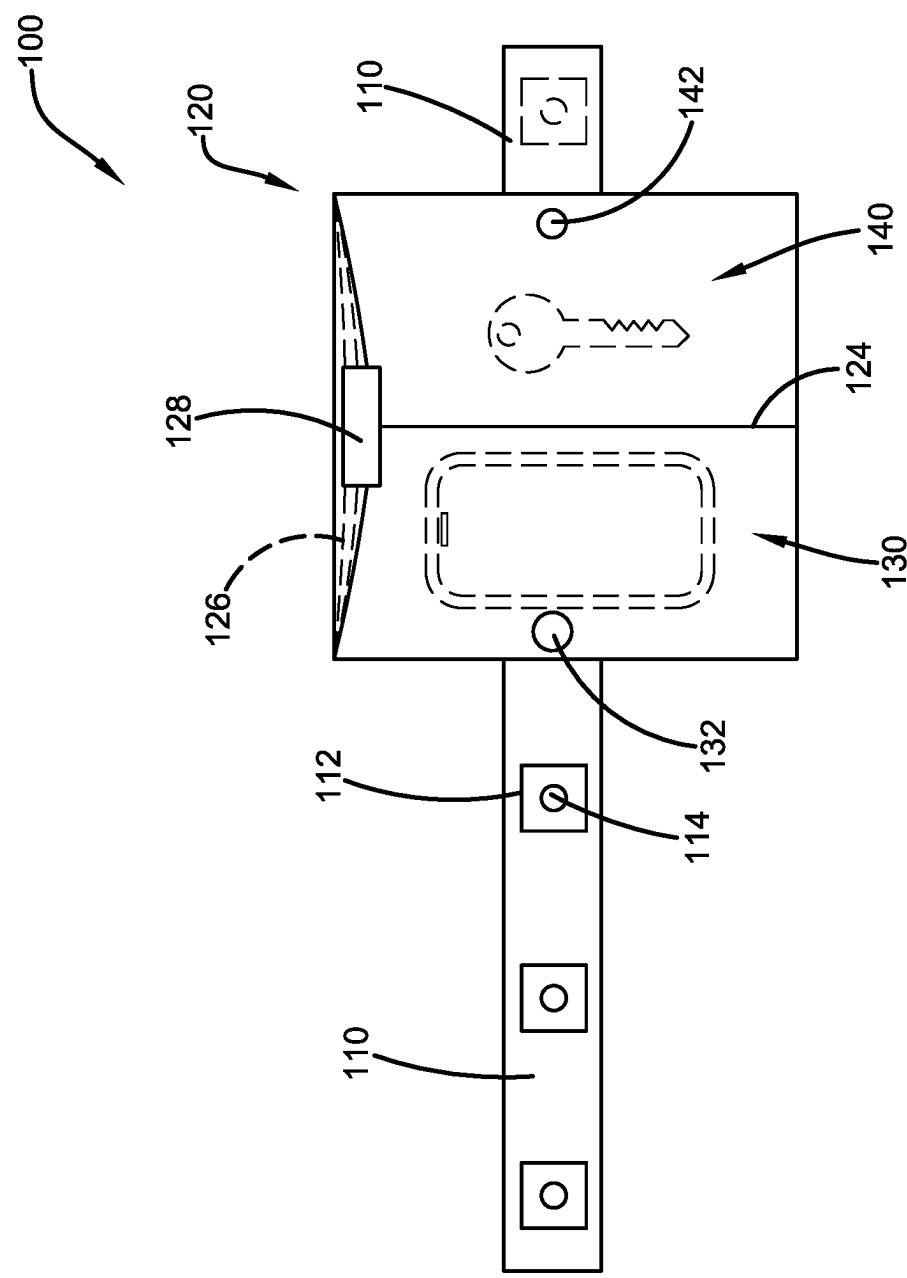

FIG. 1

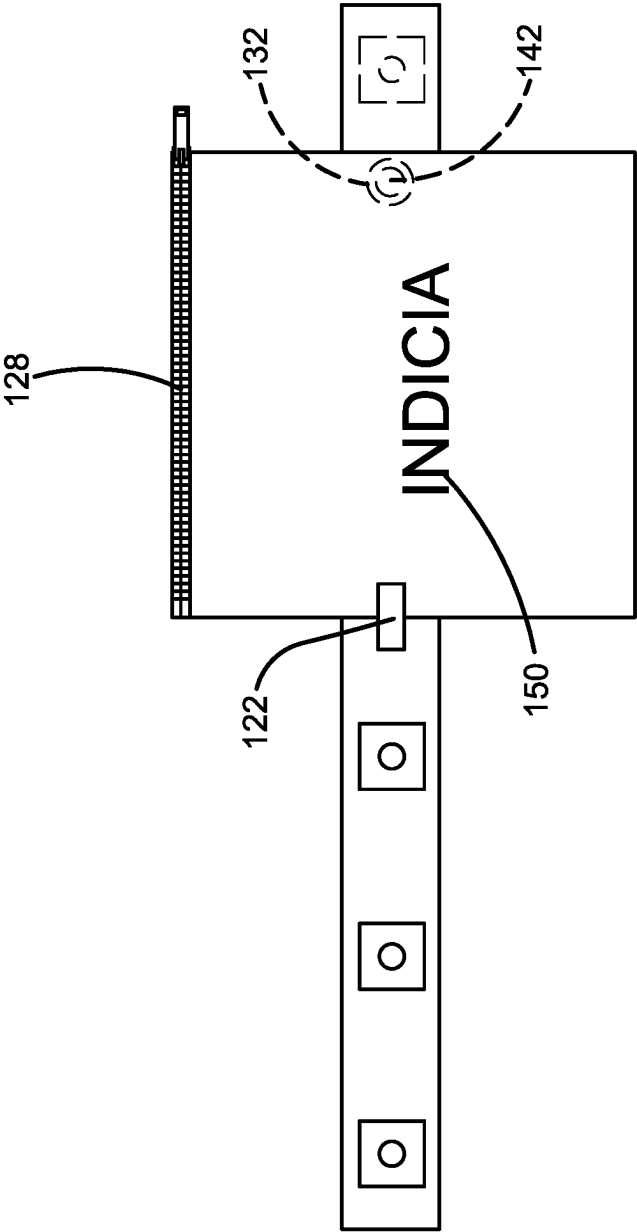

FIG. 2

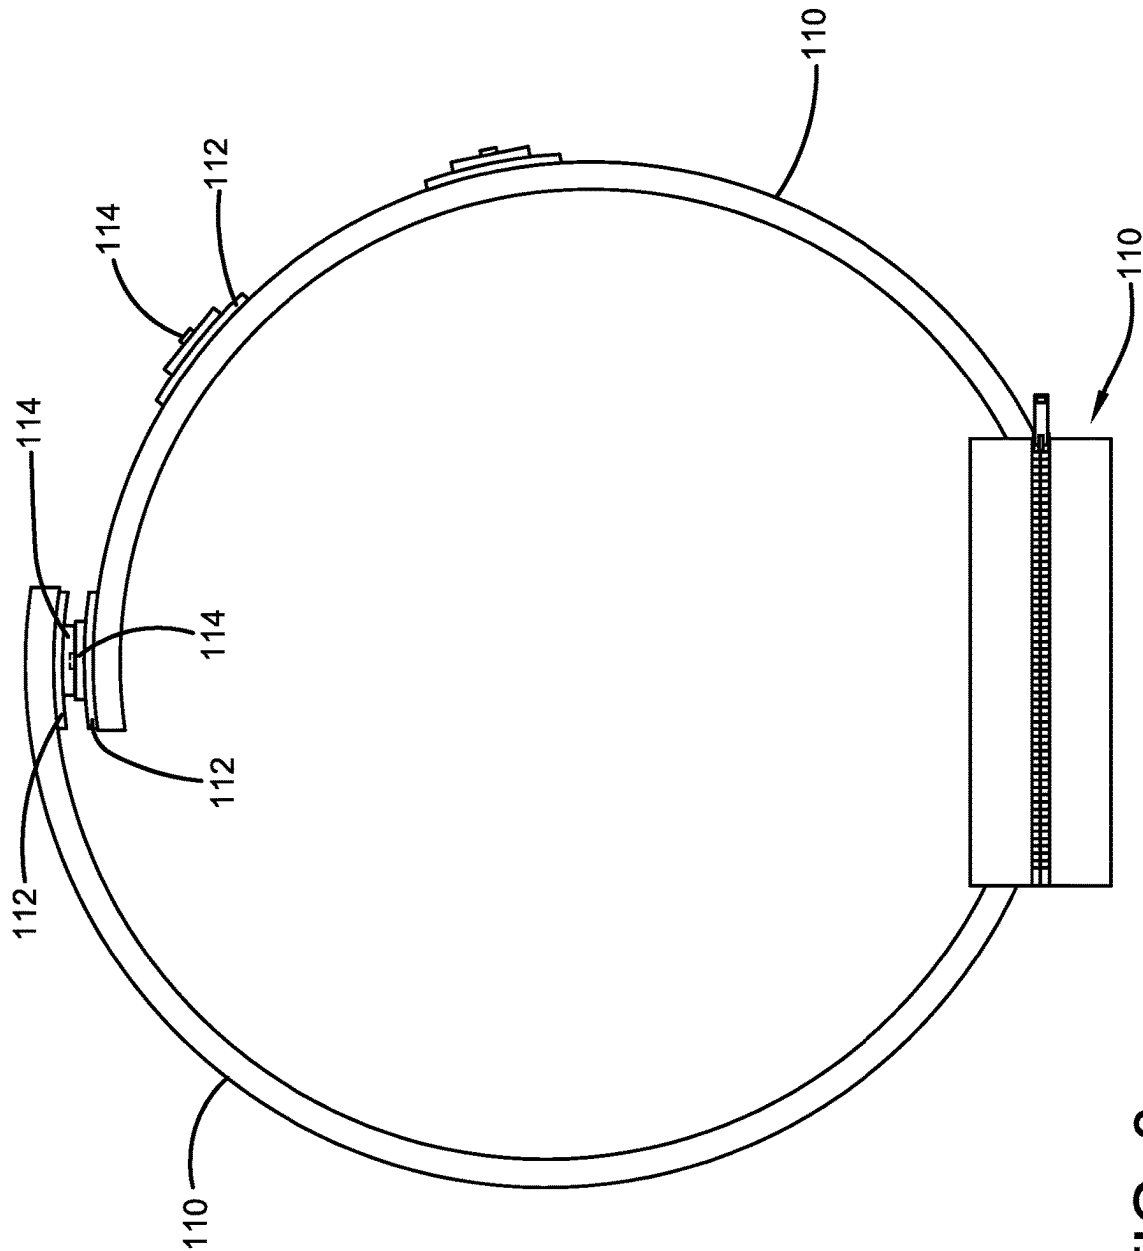

FIG. 3

BODY-WORN PERSONAL BELONGINGS STORAGE DEVICE

FIELD OF THE INVENTION

[0001] The present invention relates generally to the field of body-worn storage devices. More specifically, the present invention relates to a body-worn personal belongings storage device. The device allows at least one personal belonging to be stored within a waterproof body of the device. In one embodiment, the body is comprised of at least two compartments that allow for personal belongings to be separated. The device attaches around the body of the user via a strap that may have a first fastener and a second fastener that allow the strap to be adjusted to the desired tightness around the body of the user. Accordingly, the present disclosure makes specific reference thereto. Nonetheless, it is to be appreciated that aspects of the present invention are also equally applicable to other like applications, devices, and methods of manufacture.

BACKGROUND

[0002] Many individuals carry a cell phone and other personal belongings on their person while running, walking, hiking, exercising, etc. However, a cell phone and other personal belongings can easily fall out of an individual's pockets during said activities. Having a personal belonging fall out of a pocket can lead to damage and/or the loss of the belonging, which is undesirable.

[0003] Therefore, there exists a long-felt need in the art for a device that allows a user to carry a cell phone and other personal belongings on their person. There also exists a long-felt need in the art for a body-worn personal belonging storage device that secures a cell phone and other personal belongings to a user while running, walking, hiking, exercising, etc. In addition, there exists a long-felt need in the art for a body-worn personal belonging storage device that secures a cell phone and other personal belongings to the user and protects a cell phone and other personal belongings from water damage.

[0004] The subject matter disclosed and claimed herein, in one embodiment thereof, comprises a body-worn personal belongings storage device. The device is primarily comprised of at least one strap and at least one compartment. A personal belonging can be stored within a waterproof body of the device. In one embodiment, the body is comprised of at least two compartments that allow for personal belongings to be separated. The device attaches around the body of the user via a strap. The strap may be comprised of a first fastener and a second fastener that allow the strap to be adjusted to the desired tightness around the body of the user.

[0005] In this manner, the body-worn personal belonging storage device of the present invention accomplishes all the foregoing objectives and provides a device that allows a user to carry a cell phone and other personal belongings on their person. More specifically, the device secures a cell phone and other personal belongings to a user while running, walking, hiking, exercising, etc. While doing so, the device protects a cell phone and other personal belongings from water damage.

SUMMARY

[0006] The following presents a simplified summary to provide a basic understanding of some aspects of the dis-

closed innovation. This summary is not an extensive overview, and it is not intended to identify key/critical elements or to delineate the scope thereof. Its sole purpose is to present some general concepts in a simplified form as a prelude to the more detailed description that is presented later.

[0007] The subject matter disclosed and claimed herein, in one embodiment thereof, comprises a body-worn personal belonging storage device primarily comprised of at least one strap and at least one compartment. The device is comprised of at least one strap that attaches to the body that allows the device to be worn around the arm, leg, wrist, chest, waist, or other body part or body area of a user. The strap may be made from any fabric or other material known in the art.

[0008] The strap may be comprised of at least one first fastener that allows the strap to attach to itself to form a loop around the body of the user the device is worn around. The first fastener is preferably a hook fastener or a loop fastener. The strap may also be comprised of at least one second fastener that is preferably positioned on the first fastener. The second fastener is preferably a different fastener type than the first fastener and improves the attachment and retention of the first fastener.

[0009] The device is also comprised of a body. The body is preferably made from a waterproof material to protect personal belongings within the body from water damage. Personal belongings can be placed within the body via at least one opening that can be closed using at least one fastener. In one embodiment, the body has one continuous space. In another embodiment, the body has at least one divider that allows the body to be divided into at least two compartments. This embodiment separates personal belongings stored in the body.

[0010] An embodiment of the body with two compartments can be folded during use. In this embodiment, the exterior of both compartments may be comprised of at least one fastener. This allows the body to become smaller in size by allowing the first compartment to securely attach to the second compartment to give the device a smaller, more comfortable, and more concealable footprint when worn.

[0011] Accordingly, the body-worn personal belonging storage device of the present invention is particularly advantageous as it provides a device that allows a user to carry a cell phone and other personal belongings on their person. More specifically, the device secures a cell phone and other personal belongings to a user while running, walking, hiking, exercising, etc. While doing so, the device protects a cell phone and other personal belongings from water damage. In this manner, the body-worn personal belonging storage device overcomes the limitations of existing methods of storing personal belongings on a user's person that are known in the art.

[0012] To the accomplishment of the foregoing and related ends, certain illustrative aspects of the disclosed innovation are described herein in connection with the following description and the annexed drawings. These aspects are indicative, however, of but a few of the various ways in which the principles disclosed herein can be employed and are intended to include all such aspects and their equivalents. Other advantages and novel features will become apparent from the following detailed description when considered in conjunction with the drawings.

BRIEF DESCRIPTION OF THE DRAWINGS

[0013] The description refers to provided drawings in which similar reference characters refer to similar parts throughout the different views, and in which:

[0014] FIG. 1 illustrates a perspective view of one potential embodiment of a body-worn personal belonging storage device of the present invention while in an unfolded configuration in accordance with the disclosed architecture;

[0015] FIG. 2 illustrates a perspective view of one potential embodiment of a body-worn personal belonging storage device of the present invention while in a folded configuration in accordance with the disclosed architecture; and

[0016] FIG. 3 illustrates a top view of one potential embodiment of a body-worn personal belonging storage device of the present invention while in a folded configuration in accordance with the disclosed architecture.

DETAILED DESCRIPTION

[0017] The innovation is now described with reference to the drawings, wherein like reference numerals are used to refer to like elements throughout. In the following description, for purposes of explanation, numerous specific details are set forth to provide a thorough understanding thereof. It may be evident, however, that the innovation can be practiced without these specific details. In other instances, well-known structures and devices are shown in block diagram form to facilitate a description thereof. Various embodiments are discussed hereinafter. It should be noted that the figures are described only to facilitate the description of the embodiments. They are not intended as an exhaustive description of the invention and do not limit the scope of the invention. Additionally, an illustrated embodiment need not have all the aspects or advantages shown. Thus, in other embodiments, any of the features described herein from different embodiments may be combined.

[0018] As noted above, there exists a long-felt need in the art for a device that allows a user to carry a cell phone and other personal belongings on their person. There also exists a long-felt need in the art for a body-worn personal belonging storage device that secures a cell phone and other personal belongings to a user while running, walking, hiking, exercising, etc. In addition, there exists a long-felt need in the art for a body-worn personal belonging storage device that secures a cell phone and other personal belongings to the user and protects a cell phone and other personal belongings from water damage.

[0019] The present invention, in one exemplary embodiment, is comprised of a body-worn personal belonging storage device primarily comprised of at least one strap and at least one compartment. The strap attaches to the body that allows the device to be worn around the arm, leg, wrist, chest, waist, or other body part or body area of a user. The strap may be made from any fabric or other material known in the art.

[0020] The strap may be comprised of at least one first fastener that allows the strap to attach to itself to form a loop around the body of the user the device is worn around. The first fastener is preferably a hook fastener or a loop fastener. The strap may also be comprised of at least one second fastener that is preferably positioned on the first fastener. The second fastener is preferably a different fastener type

than the first fastener. The addition of the second fastener to the first fastener improves the attachment and retention of the first fastener.

[0021] The device is also comprised of a body preferably made from a waterproof material to protect personal belongings within the body from water damage. Personal belongings can be placed within the body via at least one opening that can be closed using at least one fastener. In one embodiment, the body has one continuous space. In another embodiment, the body has at least one divider that allows the body to be divided into at least two compartments. This embodiment separates personal belongings stored in the body.

[0022] An embodiment of the body with two compartments can be folded during use. In this embodiment, the exterior of both compartments may be comprised of at least one fastener. This allows the body to become smaller in size by allowing the first compartment to securely attach to the second compartment to give the device a smaller, more comfortable, and more concealable footprint when worn.

[0023] Accordingly, the body-worn personal belonging storage device of the present invention is particularly advantageous as it provides a device that allows a user to carry a cell phone and other personal belongings on their person. More specifically, the device secures a cell phone and other personal belongings to a user while running, walking, hiking, exercising, etc. While doing so, the device protects a cell phone and other personal belongings from water damage. In this manner, the body-worn personal belonging storage device overcomes the limitations of existing methods of storing personal belongings on a user's person that are known in the art.

[0024] Referring initially to the drawings, FIG. 1 illustrates a perspective view of one potential embodiment of a body-worn personal belonging storage device 100 of the present invention while in an unfolded configuration in accordance with the disclosed architecture. The device 100 is primarily comprised of at least one strap 110 and at least one compartment 130. The device 100 is comprised of at least one strap 110 that attaches to the body 120. The strap 110 allows the device 100 to be worn around the arm, leg, wrist, chest, waist, or other body part or body area of a user. The strap 110 may be in the form of a continuous loop or at least two continuous pieces. The strap 110 may removably attach to the body 120 via at least one fastener 122 such as, but not limited to, hook and loop, adhesive, snap button, magnet, stitches, etc. In another embodiment, the strap 110 is fixedly attached to the body 120 via the fastener 122 or other attachment mechanism.

[0025] The strap 110 may be made from any fabric or other material known in the art. However, the strap 110 is preferably made from an elastic material (or other stretchable material of the like). This allows the strap 110 to comfortably fit around the arm, leg, wrist, chest, waist, or other body part or body area of a user.

[0026] The strap 110 may be any color in the art. The strap 110 may also have at least one indicia 150 such as, but not limited to, patterns, logos, emblems, images, symbols, designs, letters, numbers, words, characters, animals, advertisements, brands, etc. In one embodiment, the strap 110 is colored in a skin color to blend into the skin of the user.

[0027] The strap 110 may be comprised of at least one first fastener 112. The first fastener 112 allows the strap 110 to attach to itself to form a loop around the body of the user the

device **100** is worn around. The first fastener **112** is preferably a hook fastener or a loop fastener. However, the first fastener **112** may be any type known in the art such as, but not limited to, adhesive, snap button, magnet, etc.

[0028] The strap **110** may also be comprised of at least one second fastener **114**. The second fastener **114** is preferably positioned on the first fastener **112**. The second fastener **114** is preferably a different fastener type than the first fastener **112**. The second fastener **114** improves the attachment and retention of the first fastener **114**. The second fastener **114** is preferably (but not limited to) a snap-button fastener, as seen in FIG. 2.

[0029] In one embodiment, the strap **110** is comprised of a plurality of first fasteners **112** (and/or second fasteners **114**) positioned along the strap **110**. This allows the strap **110** to form a loop of various sizes by attaching one fastener **112** to another fastener **112** at a specific point along the strap **110**. The fasteners **112**, **114** may be positioned on any surface (i.e., front and rear surfaces) of the strap **110**.

[0030] The device **100** is also comprised of a body **120**. The body **120** may be any color and may be comprised of at least one indicia **150** such as, but not limited to, patterns, logos, emblems, images, symbols, designs, letters, numbers, words, characters, animals, advertisements, brands, etc. The body **120** may be opaque to conceal personal belongings stored within the body **120**, such as, but not limited to, a cell phone, wallet, headphone case, etc. In another embodiment, the body **120** may be transparent or semi-opaque to allow a user to see that their personal belonging is still contained within the body **120**. The body **120** is preferably made from a waterproof material to protect personal belongings within the body **120** from water damage.

[0031] Personal belongings can be placed within the body **120** via at least one opening **126** of the body **120**. The opening **126** can be closed using at least one fastener **128**. The fastener **128** may be any type known in the art such as, but not limited to, zipper, hook and loop, magnet, snap button, etc. The fastener **128** preferably creates a waterproof seal of the opening **126**.

[0032] In one embodiment, the body **120** has one continuous space that can receive personal belongings. In another embodiment, the body **110** has at least one divider **124** that allows the body **110** to be divided into at least two compartments **130**, **140**. This embodiment separates personal belongings stored in the body **120** (i.e., separating a cell phone from keys). The divider **124** may be any removable or non-removable fastener known in the art such as, but not limited to, hook and loop fasteners, a magnet fastener, a zip fastener, an adhesive fastener, a seam, a stitch, etc.

[0033] An embodiment of the body **120** with two compartments **130**, **140** can be folded during use, as seen in FIG. 2 and FIG. 3. In this embodiment, the exterior of both compartments **130**, **140** may be comprised of at least one fastener **132**, **142**. The fasteners **132**, **142** are preferably reciprocating fasteners such as, but not limited to, hook and loop, snap button, magnet, etc. This allows the body **120** to become smaller in size by allowing the first compartment **130** to securely attach to the second compartment **140** to give the device **100** a smaller, more comfortable, and more concealable footprint when worn.

[0034] Certain terms are used throughout the following description and claims to refer to particular features or components. As one skilled in the art will appreciate, different persons may refer to the same feature or component

by different names. This document does not intend to distinguish between components or features that differ in name but not structure or function. As used herein “body-worn personal belonging storage device” and “device” are interchangeable and refer to the body-worn personal belonging storage device **100** of the present invention.

[0035] Notwithstanding the foregoing, the body-worn personal belonging storage device **100** of the present invention and its various components can be of any suitable size and configuration as is known in the art without affecting the overall concept of the invention, provided that they accomplish the above-stated objectives. One of ordinary skill in the art will appreciate that the size, configuration, and material of the body-worn personal belonging storage device **100** as shown in the FIGS. are for illustrative purposes only, and that many other sizes and shapes of the body-worn personal belonging storage device **100** are well within the scope of the present disclosure. Although the dimensions of the body-worn personal belonging storage device **100** are important design parameters for user convenience, the body-worn personal belonging storage device **100** may be of any size, shape, and/or configuration that ensures optimal performance during use and/or that suits the user’s needs and/or preferences.

[0036] Various modifications and additions can be made to the exemplary embodiments discussed without departing from the scope of the present invention. While the embodiments described above refer to particular features, the scope of this invention also includes embodiments having different combinations of features and embodiments that do not include all the described features. Accordingly, the scope of the present invention is intended to embrace all such alternatives, modifications, and variations as fall within the scope of the claims, together with all equivalents thereof.

[0037] What has been described above includes examples of the claimed subject matter. It is, of course, not possible to describe every conceivable combination of components or methodologies for purposes of describing the claimed subject matter, but one of ordinary skill in the art may recognize that many further combinations and permutations of the claimed subject matter are possible. Accordingly, the claimed subject matter is intended to embrace all such alterations, modifications, and variations that fall within the spirit and scope of the appended claims. Furthermore, to the extent that the term “includes” is used in either the detailed description or the claims, such term is intended to be inclusive in a manner similar to the term “comprising” as “comprising” is interpreted when employed as a transitional word in a claim.

What is claimed is:

1. A body-worn personal belonging storage device comprising:
 - a strap comprised of a first fastener;
 - a body attached to the strap; and
 - a second fastener positioned along the body.
2. The body-worn personal belonging storage device of claim 1, wherein the body is comprised of a transparent material.
3. The body-worn personal belonging storage device of claim 1, wherein the strap is comprised of an elastic material.
4. The body-worn personal belonging storage device of claim 1, wherein the first fastener is comprised of hook

fastener, a loop fastener, an adhesive fastener, a snap button fastener, or a magnet fastener.

5. A body-worn personal belonging storage device comprising:

- a strap;
- a first fastener;
- a second fastener;
- a body attached to the strap; and
- a third fastener positioned along the body.

6. The body-worn personal belonging storage device of claim 5, wherein the first fastener is comprised of hook fastener, a loop fastener, an adhesive fastener, a snap button fastener, or a magnet fastener.

7. The body-worn personal belonging storage device of claim 5, wherein the second fastener is comprised of a snap button fastener.

8. A body-worn personal belonging storage device comprising:

- a strap;
- a first fastener positioned along the strap;
- a body attached to the strap;
- a second fastener;
- a third fastener; and
- a divider.

9. The body-worn personal belonging storage device of claim 8, wherein the body is comprised of a first compartment and a second compartment.

10. The body-worn personal belonging storage device of claim 9, wherein the divider separates the first compartment from the second compartment.

11. The body-worn personal belonging storage device of claim 8, wherein the divider is comprised of a removable divider.

12. The body-worn personal belonging storage device of claim 11, wherein the divider is comprised of a hook and loop fastener, a magnet fastener, a zip fastener, or an adhesive fastener.

13. The body-worn personal belonging storage device of claim 8, wherein the second fastener is comprised of a snap button fastener.

14. The body-worn personal belonging storage device of claim 8, wherein the second fastener is comprised of a zipper fastener.

15. The body-worn personal belonging storage device of claim 8, wherein the third fastener is comprised of a snap button fastener.

16. The body-worn personal belonging storage device of claim 8, wherein the body is removably attached to the strap via a fourth fastener.

17. The body-worn personal belonging storage device of claim 16, wherein the fourth fastener is comprised of a hook and loop fastener, an adhesive fastener, a snap button fastener, or a magnet fastener.

18. The body-worn personal belonging storage device of claim 8, wherein the body is comprised of a waterproof material.

19. The body-worn personal belonging storage device of claim 8, wherein the body is comprised of an indicia.

20. The body-worn personal belonging storage device of claim 8 further comprised of a second strap.

* * * * *
