Electronic Multi-Game Board with Integrated Scoring System

Abstract

An innovative electronic game structure for home and entertainment settings, featuring a vertical board with multiple scoring holes, safety netting, and integrated electronic components. It offers three distinct game modes: Stroke Play, Match Play, Quota & Vegas Quota each with unique scoring and gameplay mechanics. This invention caters to various player skills and preferences, providing a dynamic gaming experience.

Background/Summary

PRIOR ART

[0001] Traditional game structures in this area typically do not leverage the capabilities of electronics to enhance the gaming experience. This invention distinguishes itself by its use of electronic components to create a dynamic and interactive gaming environment, thereby offering a

more engaging and versatile experience for players of varying skill levels.

BACKGROUND OF THE INVENTION

[0002] Field of Invention This invention pertains to the realm of electronic game structures, specifically targeting entertainment and home settings. It introduces an innovative approach to game design by incorporating versatile playing experiences through advanced electronic integration, distinct game modes, and a comprehensive scoring system. This invention represents a significant advancement over traditional game structures which lack such sophistication in electronic integration and varied gameplay.

SUMMARY OF THE INVENTION

[0003] The invention introduces an electronic game structure that consists of a vertical board with multiple scoring holes, extended netting for safety, and integrated electronic components. It is designed to cater to a wide range of players by offering three distinct game modes: Stroke Play, Match Play, Quota & Vegas Quota. Each mode is uniquely tailored to provide different gameplay and scoring mechanisms. The objective of the invention is to provide an engaging, adaptable, and interactive gaming experience that is superior to traditional non-electronic game structures.

Description

BRIEF DESCRIPTION OF THE DRAWINGS

[0004] FIG. 1 illustrates a front/top view of the innovative electronic game structure 7, with the top 1 showing an opening 2 to let light in, a vertical face 3 making the back of this structure 7 with multiple scoring holes 4, the sides 5 extending forward at an angle out, and the bottom with a raised floor 6 in order to catch the balls.

[0005] FIG. 2 illustrates an inside view of the innovative electronic game structure 7 where the under side of the top 1 is visible, and all the scoring holes 4 on the vertical back 3 are shown, the insides of the sides 5 are also shown, as is the raised bottom 6.

[0006] FIG. 3 illustrates a top down left sided view of the innovative electronic game structure 7, showing only the top 1 and the left side 5.

[0007] FIG. 4 illustrates a top view of the innovative electronic game structure 7 showing the top 1 and the opening 2.

[0008] FIG. 5 illustrates a top down right sided view of the innovative electronic game structure 7, showing only the top 1 and the right side 5,

[0009] FIG. 6 illustrates the display model of the innovative electronic game structure 7 with the entirety of the scoring holes 4, the underside of the top 1, the right and left sides 5 protruding at an angle out, safety netting 9 reaching out from each of the protruding sides 5, raised base 6 and a launching pad 10 from which the user strikes the ball.

DETAILED DESCRIPTION OF THE INVENTION

[0010] The game board is a vertically oriented structure designed with precision to cater to a diverse player base. It features a series of holes, each meticulously assigned different point values, strategically placed to challenge players of varying skill levels and to promote competitive yet enjoyable gameplay. The safety netting, extending approximately 2 feet beyond the board's perimeter, is a critical safety feature, ensuring the containment of game elements and providing a secure playing environment.

[0011] To play the game, a person stands on the launching pad lying on the ground in front of the game. Sets the ball on the pad and strikes the ball with a golf club into the game, aiming at the highest scoring holes on the board, or aiming to satisfy some other type of gameplay. The game is electronic, so once a ball has entered a hole in the board, a score is registered for that player. The game signals if another player is up who repeats the same scenario.

[0012] This invention incorporates advanced electronic components, which are central to its

innovative nature. The board is equipped with sensors in each hole, designed to detect and accurately record scores automatically, thus eliminating the need for manual scorekeeping. An electronic display panel is integrated into the structure, showing current scores, game mode selection, and player turns in real-time. User interfaces are designed to be intuitive, possibly including buttons or touch screens, allowing players to effortlessly select game modes, view rules, and interact with the game system.

[0013] The invention features three game modes, each offering a unique gaming experience:

[0014] Stroke Play (1-4 Players): In this mode, players aim to accumulate a total score of 36 or 72 points (but which can vary), with each hole's score contributing to their cumulative total. This mode tests individual skill and strategy in point accumulation.

[0015] Match Play (1v1 or 2v2): This competitive mode allows individual players or teams to compete in a turn-based format. Each hole is a mini-competition, with the highest-scoring player or team winning that hole. In the event of an overall tie, a thrilling sudden death 3-ball playoff is initiated to determine the winner.

[0016] Quota Points (1-4 Players): Designed for strategic play, this mode challenges players to achieve a specific combination of point values across different holes.

[0017] Vegas Quota Points (1-4 Players): Designed for strategic play, this mode challenges players to achieve a specific combination of point values across different holes. The strategy lies in not just achieving the set goals but also in accumulating extra points in the achieved categories to enhance the total score.

[0018] The interaction with the game board is a key aspect of this invention. Players engage with the board by performing actions such as hitting golf balls with a golf club towards the holes, each action requiring skill and precision. The electronic system not only provides instant feedback on scores but also enhances the overall game progress with visual and auditory cues. This feature ensures a dynamic and immersive gaming experience. The game structure is adaptable for solo play, competitive play, and team play formats, making it a versatile option for a wide range of users.

[0019] The game board and its components are constructed with high-quality materials, chosen for their durability and suitability for the intended use. The materials are selected to ensure the longevity of the game structure and to withstand regular usage. The netting is made from high-strength materials to ensure safety during play. The electronic components are housed in a weather-resistant casing, protecting them from environmental factors and ensuring reliable performance over time.

Claims

1. An electronic game structure comprising a vertical board with multiple scoring holes and extended safety netting.
2. The electronic game structure of claim 1, wherein said electronic components are housed in a weather-resistant casing, protecting them from environmental factors and ensuring reliable performance over time.
3. The game structure of claim 1, wherein each hole on the board is assigned a specific point value.
4. A method of playing a game using the structure of claim 1, including a Stroke Play mode.
5. The method of claim 3, wherein the Stroke Play mode involves competing to reach a total of 72 points.
6. A method of playing a game using the structure of claim 1, including a Match Play mode with options for individual or team play.
7. The method of claim 5, wherein Match Play involves scoring per hole, with a sudden death playoff for tied games.
8. A method of playing a game using the structure of claim 1, including a Quota/Vegas Quota

mode.

9. The method of claim 7, wherein Quota involves collecting a predetermined number of points from different scoring holes.

10. The method of claim 7, wherein Vegas Quota involves collecting a predetermined number of points from different scoring holes and acquiring points after achieving the predetermined number of holes before the other player(s) have.

11. The game structure of claim 1, further comprising electronic components for score tracking and game mode selection.

12. The game structure of claim 9, wherein the electronic components facilitate user interaction and enhance gameplay.
