Trade Policy: Evidence Based Trade Policy for the United States of America and the World - Blockchain a new Service Industry

Abstract

Evidence Based Trade Policy for the United States of America and the World to make Blockchain a new Service Industry. Improvise and Safeguard Human health and Wealth against harm by elevated Trust, Security and Authenticity in the system and Consumer-focus approach to auto-disrupt any industry monopoly. Allows trade simplification to elevate industrial productivity and economy by adoption of Self-Selection Hypothesis by established industries that are utilizing Blockchain with proven success and Learning Hypothesis by remainder industries to increase efficiency by Blockchain transition. Continuous innovation for Blockchain Service Industry by each country worldwide to create a Trade in Value-Added contribution towards its local Blockchain Service Industry, leads to a global Blockchain Service Industry

Background/Summary

POLICY

[0001] Blockchain Service, a new service industry for worldwide Trade

NEED

[0002] Human Health and Wealth is recognized by Paper and Digital records [0003] These records require Trust, Security, and Authenticity [0004] Cannot be compromised by fraud and stealing

[0005] Refer to FIG. 1

Description

OUTLINE

[0006] Blockchain technology has the ability to store and safeguard Human Health and Wealth information; offering complete: control [0007] Ability of Blockchain to service every Trade industry, requires that it should be defined as a new service industry worldwide

Blockchain

[0008] Chain of secure storage blocks, referencing each other through codes

[0009] Refer to FIG. 2 [0010] Each block in the chain, has records or data or content [0011] Each block has Secret code to previous and next block [0012] Each block maintains its order and connectivity in the chain [0013] The chain of blocks forms a ledger (that is, a Book of records)

[0014] Ledger is auto-guarded in a Private vault

[0015] Refer to FIG. 3 [0016] Vault is Tamper-Proof (cannot be altered) [0017] Guarded and Secure with keys (private and/or public) [0018] Private of original copy retention [0019] Public key is used for sharing information with 3rd parties, if needed and can be revoked at any time

Transition of Trade Industries

[0020] Every Trade Industry has and will find use of Blockchain service industry for the reasons below: [0021] Openness of Economy increased [0022] Trade Documentary Compliance, easily executed [0023] Trade Promises and Contracts can be stored between Regions, Bilaterally, Multilateral [0024] Controlled and Secure information Storage [0025] Ease and Speed of Sharing [0026] Ownership proof and control [0027] Trust and Authenticity [0028] Information Cannot be Compromised or Altered

Adoption as a Ripple-Effect

[0029] Encourages Openness of Economy, in every industry, for the reasons below:

[0030] Reduced Tariffs

[0031] Transparent identifiable Trade Quota [0032] Additional transparency for NTB (Non-Tariff-Barriers) [0033] FDI (Foreign Direct Investment) and M&A increases due to transparency [0034] Attractive for Portfolio Investment and Greenfield [0035] Aligns with Sustainable Development Goals (SDGs) in emerging countries

Productivity Elevated

[0036] At Macroeconomic-level, growth increases as markets perform better, knowledge sharing eases [0037] At Microeconomic-level, ease doing business in foreign markets, with international knowledge exposure [0038] Blockchain Service Industry Aligns with Modern trade theories [0039] Economic support during Globalization or De-Globalization phases

[0040] Refer to FIG. 5

Trade Policy Simplified

[0041] Negotiations and treaties, executed, faster identification of its ill side-effects, if any [0042] Tariff, Subsidies, Quotas, can better controlled, managed, broadcasted [0043] Economic Diplomacy for state, culture, political reasons better communicated

Proven Use Cases by Industry

Goods and Services

[0044] Buyers or Sellers to transfer reputation using distributed ledger, overcome Trust Challenges

Supply-chain/Logistics

[0045] Increase transparency of productions and distributions chains in regional or bi-or multilateral Economies especially for perishable produce, livestock products

Art and Recreation

[0046] Drive content trading between producers and buyers [0047] Facilitates FDI and ideas [0048] Improved transparency on sharing rights, licensing terms [0049] Examples are Art or Film creators and distributors

Energy

[0050] Decentralized energy data exchange platforms [0051] Enable Forecasting for investment and trade of Smart-Grids

Healthcare

[0052] Personal health records better guarded [0053] Patient can sell their data to his/her consented drug-trial

Finance and Insurance

[0054] Facilitates large dollar value transactions, with history records, e.g.: Real-Estate transactions [0055] Safeguard title records and documents [0056] Accounting allows continuous verification, very low threat of alteration/corruption [0057] Middle and Back office operations highly transparent e.g.: payroll, underwriting, reconciliations and many others

Legal

[0058] Court trials eased with no compromised documents in transit [0059] No written contracts, less expensive lawyer involvement [0060] Secure property, intellect property, and replace public notary

Entertainment

[0061] Avoids duplicate ticketing frauds e.g.: for large sports events

Hardships Identified

[0062] Trade data availability for analysis, will require permissions and will not always be publicly or privately available [0063] Blockchain Fraud references were due to its popularity or association with, immature cryptocurrency investments [0064] Policy Makers need to spend more time on the Recognition and Interoperability of various Blockchain

Evidence and Extension

[0065] A Self-Selection Hypothesis is applied by industries like Banking, Financial Services, Government; Healthcare, Oil and gas, at various levels [0066] Learning Hypothesis can be applied to more industries. The transition cannot be instant, however some industries can adapt more readily [0067] Blockchain service industry disrupts monopoly and gives more power to Consumers [0068] Blockchain has proven its success, across various industries [0069] Ability to safeguard Human health and Wealth Every country, worldwide, can create Trade in Value Added Contribution towards its Blockchain Service Industry

Policy Inference

[0070] Blockchain Service industry, should be established worldwide

[0071] Refer to FIG. 7

Claims

1. Improve and Safeguard Human health and Wealth against harm a. Elevated Trust, Security and Authenticity in the system b. Consumer focus approach to auto-disrupt any industry monopoly
2. Trade simplification to elevate industrial productivity and economy by adoption of: a. Self-Selection Hypothesis by established industries that are utilizing Blockchain with proven success b. Learning Hypothesis by remainder industries to increase efficiency by Blockchain transition
3. Continuous innovation for Blockchain Service Industry by each country worldwide to create a

Trade in Value-Added contribution towards its local Blockchain Service Industry, leads to a global Blockchain Service Industry
