#### Abstract

A master game board comprising a plurality of 49 cell spaces aligned in vertical columns and horizontal rows that embody color schemes, biblical indicia, definable alphabets, and a game title. The callout markers are detachably affixed to the master game board, and randomly called out until a winner is declared. The game cards mirror the master game board with the exception of the chronologically placement of the biblical indicia, the winning diagrams, and the callout markers. All game cards embody identical biblical indicia randomly designated on cell spaces allowing for concurrent learning engagement among players without a loss of turn during game play. The game cards are affixed with detachable cell space markers that are placed on the surface of individual cell spaces that have answers corresponding to called out entries. Unused callout markers, at the end of a game, are firstly used in a new game.

## Background/Summary

### BACKGROUND OF THE INVENTION

(1) A board game apparatus, similar to Bible bingo-type games, comprising an entertainingly method of game play that simultaneously heightens the potential, and ability of single and multiple players to learn and memorize the books of the Bible. In particular a board game consisting of Bible game playing articles collectively utilized during game play to entertainingly teach of biblical documentation and presents a simplified method of game play for all participating players to concurrently learn and memorize the books of the Bible.

(2) To heighten the learning, interests, and entertainingly teach of various documentations of the Bible, Bible board games have been devised for such objectives aforementioned. For example, U.S. Pat. No. 20060267280A1 discloses a Bible Bingo game that employs a board game comprised of game cards with adjacent square spaces on the surface having biblical indicia that randomly vary on each game card of which incorporates a method of game play relative to BINGO U.S. Pat. No. 2,322,324. Bible Bingo is a game of chance embodying a plurality of game cards that, individually, have different and similar random answers on the surface of the square spaces that correspond to answers printed on callout game cards. Each player is given a game card that has one of the letters of BINGO at the top of the question and answer on the game card. Bible game pieces, and a playing board is also given to the participants to begin the game. A caller will call out the question from a callout card. If a player has the answer on their board that corresponds to the answer and the appropriate letter in the word BINGO printed on their perspective card, they may mark the correct answer on their board using game pieces that are in the form of a Bible. The first player to attain a winning configuration and shouts BINGO wins the game.

(3) U.S. Pat. No. 6,547,245B1 discloses an apparatus comprising a board game having a plurality of Bible indicia, religious, and colored game spaces printed along a path on the surface of a game board having a start and an end. Sequentially, each player will be given a turn to roll a set of dice. The number revealed by the dice indicates the number of spaces a player can move along the game board with their token. Each space on the game board corresponds to 1 of 3 sets of cards of which are scripture cards, special cards, and player cards. To select a card from one of the three card decks is contingent upon the position of the players individual token on a space of the game board after a roll of dice. For example, if a player move their token as indicated by the number revealed on a set of dice rolled, and the space of which they move to has a Bible indicia, a player must select a card from the deck of scripture cards and answer the question thereon, and complete the action printed on the scripture card. If the player cannot answer the question on the scripture card, they cannot initiate the action on the scripture card that prompts a player to move along the game board with his/her token. Therefore they cannot proceed to another space on the game board. Afterwards, while the player token is temporarily stationary, the player must search for the answer in the reference book of the board game, locate and memorize the answer, and quote the answer during his/her next turn at game play. If the correct answer is given, the player will be able to complete the action printed on the scripture card of which will allow the player to move forward unto another space on the game board. Meanwhile, the other participating player(s) may, sequentially, proceed with their turn at game play and provide the answer to the question of a selected card of one of the three sets of game cards that correspond to the space where their individual token is positioned. Each player may proceed to move forth along the spaces on the game board according to the correct answer that is given corresponding to the perspective card that is selected.

(4) Likewise, if any one of the participating players answer their perspective question of the selected card incorrectly, his/her token will remain temporarily stationary on a space of the game board until their next turn at game play of which they must search the reference book, memorize, and proclaim the correct answer to move further along the game board. The game is won by being the first player to move their token to the finish space.

(5) Although the aforementioned patents present an entertainingly apparatus for motivating and encouraging persons to memorize versus of the Bible, and to learn of GOD's commands they do not provide a method of game play that will allow all participants to actively engage simultaneously and uniformly learn of the biblical content concurrently during game play. The prior art embodies biblical indicia, and information printed on the surface of the participants game playing articles that vary on each individual game card for each player, thus, invariably, creating a loss of turn for a player(s) and a stifled opportunity for all participants to learn and memorize the answers to the questions collectively during game play.

(6) Therefore, in the context of learning the books of the Christian Bible, and documentation pertaining to the Bible there is a need for an educational board game that embodies a method of game play that entertainingly promotes the learning of the books of the Bible and biblical content through simultaneous engagement of all participating players at once without a loss of turn during game play. The present embodiment, during game play, equally provides an opportunity for all participants to learn and memorize biblical content concurrently.

(7) The present embodiment further presents a board game with a master game board and a plurality of game cards with affixed cell space markers. The entirety of the board game playing articles can be efficiently manufactured, economically produced, and promptly distributed among participants before the start of a game to minimize the time necessary to initiate game play.

## SUMMARY

(8) The inherent disadvantages aforementioned in the known board games of the prior art are noticeably visible in the detailed instructions of the prior art's method of game play. The present invention has many of the advantages of the prior art and incorporates a newly devised apparatus and method of game play that is uniquely novel and non-obvious. Thus, the present invention

embodies a new entertainingly educational game for learning the books of the Bible and biblical related content.

(9) The present invention is a board game devised for the purposes of providing a family oriented biblical board game of entertainment that embodies a method of game play that provides an opportunity for children and adults to concurrently learn and memorize biblical persons, places, things, and books of the Bible throughout game play without a loss of turn. It comprises a planar master game board having a plurality of cell spaces printed with biblical indicia for the purposes of keeping a record of the called out entries which are rectangular callout markers.

(10) The present invention also encompasses a plurality of game cards (only one shown) individually having an equal number of horizontal rows and vertical columns embodying a matrix of adjacent cell spaces numerically embodying random biblical indicia designated on the playing surface of the game cards.

(11) Affixed to the players game cards are square cell space markers that are detached prior to the start of a game which are used for marking an answer on a designated cell space, corresponding to a callout marker.

(12) Further details of the present invention and a thorough explanation of how to use the newly formed apparatus and method of game play will be specifically expressed in the section of the details of the invention.

---

## Description

### BRIEF DESCRIPTION OF THE DRAWINGS

(1) FIG. 1 is a top plan view of the board game 2 illustrating the master game board 4 having a plurality of cell spaces, biblical indicia, single and two color scheme cell spaces, and an equal number of horizontal rows and vertical columns. The title of the game is printed in a single top header. Callout markers are affixed to the master game board with alphabets defined, winning diagrams, and how-to-instructions of the procedure of how to detach game board callout markers.

(2) FIG. 2 is an illustrated top plan view of a player's game card 32 having a plurality of cell spaces embodying biblical indicia, single and two color scheme cell spaces on the surface of an equal number of horizontal rows and vertical columns. The title of the game is printed in a single top header of the game card. The bottom-header of the upper half of the game card illustrates alphabets that are defined. Cell space markers having biblical indicia are affixed to the game card with how-to-instructions of the procedure of how to detach cell space markers.

(3) FIG. 3 is an illustrated rear plan view of FIG. 1 and FIG. 2.

(4) FIG. 4 and FIG. 5 are representations of an elevated top and bottom view of both FIG. 1 and FIG. 2

(5) FIG. 6 and FIG. 7 are representations of an elevated left and right view of both FIG. 1 and FIG. 2.

(6) FIG. 8 is a front and rear view of a call out marker with biblical indicia.

(7) FIG. 9 is a front and rear view of a cell space marker with biblical indicia

(8) FIG. 10 is a representation of nine stationary unique cell spaces with printed single color and two color schemes blue, green, yellow and white, and red and white embodied with biblical indicia on both the master game board 4 and the game card 32.

(9) FIG. 11 is a representation of the upper half of game cards 32 illustrating the embodiment of identical biblical indicia that are stationary on the surface of nine unique color cell spaces and each game card having identical biblical content uniquely distinguished by a random placement of an embodiment of a combination of letters, numbers, words, and biblical indicia within the cell spaces on the surface of the player's individual game card.

(10) FIG. 12 is an illustration of the vertical, horizontal, and diagonal winning diagrams that can be

achieved during game play.

(11) FIG. **13** illustrates the center call out marker **24** of the upper half of the master game board called out and marked on the center cell space **20** independently.

(12) FIG. **14** is a representation of the front view of the upper half of a game card illustrating the center cell space dependently marked corresponding to an answer that is marked on the surface of a single color **16** cell space **14**.

(13) FIG. **15** illustrates the front view of the upper half of a game card whereas the center cell space is not automatically marked as a free cell space prior to, or during game play.

#### DETAILED DESCRIPTION OF THE INVENTION

(14) The description of the embodiment of the present invention and its' entirety is not intended to be limited by the descriptive illustrations of the drawings, terminology, and objectives of the application of the present invention. It is to be further understood that the newly devised apparatus illustratively introduces an entertaining method of game play for learning the books of the Christian Bible that is capable of being modified into various embodiments that may express the current apparatus in multiple ways without deviating from the principles of the invention. The illustrations of the drawings and the specifications presents a simplified approach to the procedure of the present invention that those that are skilled in the art will realize the potential of how to optimize the embodiments of the present invention beyond the specifications within the scope of the principles of the board game.

(15) Referring to the preferred embodiment FIG. **1** a board game **2** comprising a master game board referenced by the numeral **4** illustrating a top plain view embodying a top header with a game title **6**, seven horizontal rows and seven vertical columns, and a planar playing surface consisting of a matrix of adjacently aligned rectangular cell spaces **14** which mirrors the conveniently affixed **30** rectangular callout markers **24** that are illustrated in FIG. **8**. Cell spaces **14** embody a Bible book number **8**, a Bible book name **10**, an alphabet, a biblical name, and a biblical title **22**, of which, collectively, are biblical indicia representing biblical definitions **22**, answers that correspond to callout markers **24**, and **39** old testament books of the Christian Bible printed on the surface of the master game board **4**, and the player's game cards **32** (only one shown). The **27** new testament books of the Bible are not shown in the drawings. The dimensions of the board game **2** playing members FIG. **1** and FIG. **2**, and the method of game play, further explained in the description, are identically the same for the **27** new testament books of the Bible dissimilar only to the biblical indicia printed on the surface of the cell spaces **14**, the biblical definitions **22**, and the call out markers **24**. FIG. **10** illustrates a set of nine stationary unique cell spaces **14** with stationary biblical indicia on the master game board **4** and the game cards **32**. The cell spaces **14** mirrors the affixed **30** callout markers **24** embodying identical matching pairs of single colors **16** of blue, green, and matching pairs of two color schemes **12** of yellow and white, red and white **18**, and a single center cell space **14** color scheme blue and yellow **20** located in the center of the master game board **4** and the player's game card **32** that is marked to validate the relativity of the biblical indicia of two identical single **16**, and two identical two color scheme **12**, **18** cell spaces **14** during game play. Affixed **30** at the bottom half of the master game board **4** are callout markers **24**, detachment instructions **26**, and winning diagrams **28**. The dimensions of the rectangular master game board **4**, and the rectangular game card **32** are dimensionally identical as shown in FIG. **3** of which illustrates the rear top view, and an elevated top view FIG. **4**. FIG. **5** is an elevated bottom view.

(16) FIG. **6** is an elevated left side view, and FIG. **7** is an elevated right side view.

(17) Referring to FIG. **2** a game card **32** mirrors the master game board **4** with the exception of the sequentially chronological positioning of the biblical indicia printed on the surface of the cell spaces **14**, the affixed **30** callout markers **24**, and the winning diagrams **28**. In further detail, each game card **32**, numerically, has identical biblical indicia markings randomly located within the cell spaces **14** on the surface of each individual game card **32**. The bottom half of the game card **32** is

conveniently affixed **36** with square cell space markers **34** having a biblical indicia SHABACH thereon the surface as illustrated in FIG. **9** showing a top and rear plain view of a cell space marker **34**. The affixed **36** cell space markers **34** are detached **24** from the lower bottom half of the game card **32** prior to game play for the purposes of marking corresponding answers that are located within the cell spaces **14** on the playing surface of each individual game card **32**.

(18) FIG. **11** illustrates the upper top half of two random game cards **32** having numerically identical printed biblical indicia randomly located on the playing surface of the cell spaces **14**. The two game cards **32** illustrate the uniqueness of each individual game card **32** of which allows for each participating player to engage in the fun of learning the books of the Bible simultaneously during game play without a loss of turn due to the limitations noted in the prior art whereas an individual player who lacks the knowledge necessary to respond with an answer to a particular question printed on a set of playing cards, a game card, or a game board will be delayed in progressing during the game. Thus, stifling the fun of consistent and active engagement among players during game play, and limiting the ability of various participating players to learn of the content of the game concurrently.

(19) FIG. **12** illustrates the winning diagrams vertical, horizontal, and diagonal **28** that can be achieved during game play using the affixed **36** cell space markers **34** of which, corresponding to the callout markers **24**, are used to mark the answers on the game card **32**.

(20) FIG. **13** illustrates the placement of the center cell space callout marker **24**, having a biblical indicia marking SHABACH, called out and marked independently on the surface of the master game board **4** in its' designated cell space **14** prior to an announcement of any two identical single color **16**, or identical two color scheme **12**, **18** cell spaces **14** shown in FIG. **13**. Any one unique color cell space of an identical matching pair of unique color **12**, **16**, **18** cell spaces **14** that is announced by the game host and marked on a player's game card **32**, thereafter the single two color scheme **20** center cell space **14** has been marked, will be automatically validated as having relatively inseparable biblical indicia in conjunction with the matching identical individual unique color **12**, **16**, or **18** cell space **14** which is also marked being parallel to the aforementioned cell space. FIG. **14** illustrates a game card **32** with two matching pairs of single color **16** FIG. **10** cell spaces **14** that are both marked, corresponding to callout markers, and validated with a cell space marker **34** positioned on the two color scheme **20** center cell space **14** of the game card **32** to validate the inseparable relationship of biblical indicia on the surface of any two identical single color **16**, or two color scheme **12**, **18** cell spaces **14** as shown in FIG. **14**. FIG. **15** illustrates a game card **32** with a horizontal winning diagram **28** whereas the color scheme **20** of the center cell space **14** has not been marked with a cell space marker **34** being that it is not an automatically freely marked center cell space **14** during game play. The color scheme **20** of the center cell space **14** is only marked independently when corresponding to a callout marker **24**, or dependently marked in conjunction with a matching pair of unique cell spaces to validate the inseparable relationship of biblical indicia on the surface of any two identical unique single color **16**, or two color scheme **12**, **18** cell spaces **14** that are marked corresponding to a callout marker **24**.

(21) Rules of the Game

(22) A game host begins the game by distributing game cards **32** to each individual participating player. The game host will detach **26** the affixed **30** callout markers **24** from the master game board **4**, and the players will detach **24** the affixed **36** cell space markers **34** from their individual game card **32**. The game host will place the callout markers **24** on a flat surface, or in a suitable holding container. The host will then intermix the callout markers **24**, and proceed to randomly chose a callout marker **24** to call out to the players. The callout marker **24** is placed on a designated cell space **14** of the master game board **4**. In response to the individual callout markers being announced, the participating players will, concurrently, mark the corresponding answer on the designated cell space **14** of their individual game card **32** simultaneously during game play

(23) The unique stationary single color **16** cell spaces **14**, and the unique stationary two color

scheme **12**, **18** cell spaces **14** are individual matching pairs. Each individual matching pair of color cell spaces embodies biblical indicia that are inseparably relative in content toward one another. E.g., FIG. **2** illustrates the relationship of the biblical indicia of the single color **16S-47 ALPHA** and **S-48 OMEGA 16** designated on the surface of their perspective cell space **14** of which are name titles **22** of GOD mentioned in Revelation 22:13 of the Holy Bible as “the beginning (S-47 ALPHA) and the end (S-48 OMEGA).”

(24) When the game host randomly selects, and calls out one single color **16**, or a two color scheme **12**, **18** call out marker **24**, the players must use their cell space markers **34** to mark both the answer on the surface of the unique color cell space **14** that corresponds to the call out marker **24**, and dependently mark the matching unique color cell space **14** of the said pair wherein they are parallel one to another having inseparably relatively biblical indicia. Additionally, the color scheme **20** of the center cell space **14**, is dependently marked in conjunction with unique colored **16**, **12**, **18** cell spaces **14** as it is positioned centrally to validate the relationship between any two, or more identical matching pair of single color **16**, and two color scheme **12**, **18** cell spaces **14** with inseparably relative biblical indicia that are parallel to one another. The game host may also call out the color scheme **20** callout marker **24**, of which will be marked on the surface of the center cell space **14** of a player's individual game card **30** independently without a single color **16**, or two color scheme **12**, **18** cell space **14** being announced, or marked. The color scheme **20** cell space **14** is only marked independently when a dedicated callout marker **24** is called out prior to the marking of a unique color cell space. The color scheme **20** can also be dependently marked to validate the relationship of biblical indicia on the surface of any two, or more identical individual matching pairs of solid colors **16**, and two color schemes **12**, **18** that are marked corresponding to a callout marker **24**.

(25) When the game host announces a callout marker **24**, each player will be able to mark a corresponding answer on the surface of the designated cell space **14** of their individual game card. Excluding the stationary unique colored FIG. **10** cell spaces **14**, the biblical indicia of its' perspective cell space **14** that corresponds to the entry called out will be located in a different area of the matrix of cell spaces **14** on each individual player's game card **32**. This enables everyone to have the same opportunity to mark a cell space **14** in a different location on their perspective game card **32** during game play.

(26) Thus, enabling all participating players to learn of the books of the Bible simultaneously while having fun being entertained by the method of game play that provides the optimum opportunity to win without the restrictions of losing a turn during game play as aforementioned in the background of the invention section pertaining to the prior art. The game host will continue to announce the callout markers, and mark the entries on the surface of their designated cell space **14** of the master game board **4** until a player(s) has attained a winning diagram **28** on their perspective game card **32** and shouts the word SHABACH. The placement of the cell space markers **34** on the surface of the answers of the proclaimed winning game card **32** will be proofed for accuracy by the game host according to the entries placed on the master game board **4** to validate the answers on the player's game card **32** and the completion of one of the winning diagrams **28**.

(27) If an individual player whom shouts the word SHABACH is not declared a winner of the game by reason of insufficient proof, the game will resume until a winner is declared and validated by the entries on the master game board **4**.

(28) When a player is declared the winner of a game, the entries on the master game board **4** will be removed, intermixed, and kept separate from the callout markers **24** that were not called out during game play. The players will also remove their cell space markers **34** from their individual game card **32**. The remaining callout markers **24** that were not called out during the previous game will be the first callout markers **24** to be announced in the beginning of a new game. Thereafter the said separate entries will be announced. This method will assure that all callout markers are announced for the purposes of learning and memorizing, by familiarity, all the biblical answers

designated on the cell spaces **14** of each individual player's game card **32**.

(29) The present invention presents a method of game play that is simplistic and comprehensible for all participants to learn of the biblical content that is introduced during game play. E.g., if only fourteen callout markers were called out, and a player is declared the winner, all participating players would have enjoyed the same opportunity to become acquainted with the names of the fourteen books of the Bible during game play.

(30) It has been descriptively illustrated that the preferred embodiment provides an opportunity that enables participating individuals of the board game to learn of the biblical documentation of the Bible simultaneously and concurrently throughout the course of game play without the restrictions of having to acquire a higher level of knowledge and skill of biblical content to enjoy the game, or lose a turn during game play due to the variableness of miscellaneous biblical answers only available to participants randomly of which stifles the progression of the participating players to learn concurrently and lessens the effectiveness of a game devised to promote the learning and the memorization of the books of the Bible.

(31) Uniquely, the master game board is affixed with rectangular callout markers **24**. Likewise, the game cards **32** (only one shown), uniquely, are affixed with rectangular cell space markers which are game pieces **34** that are inexpensively manufactured and are economically produced. The printing materials are environmentally friendly, and biodegradable. Game playing articles of the board game can easily be produced using home printers. Therefore, the player's game cards are independent of the need to add additional game pieces, or develop additional playing articles to necessitate the start of a game. Thus, they can be efficiently distributed to the participants minimizing the time and preparation that is needed to start game play. Therefore, the present invention promotes and heightens engagement and excitement among players for learning and memorizing the books of the Bible simultaneously for all players toward the winning of the game.

## Claims

1. A board game comprising: a rectangular shaped master game board having an upper formed planar playing surface; a master game board planar surface embodies a top header with title, an equal number of adjacently aligned vertical columns and horizontal rows having a matrix of adjacently aligned rectangular cell spaces embodying distinct biblical indicia sequentially and chronologically printed on the surface of the master game board; a matrix of cell spaces individually embodying a distinct Bible book number, a Bible book name, an alphabet, a biblical name, and a biblical title which are biblical indicia representing biblical definitions that are printed on the bottom header of the master game board; a plurality of detachably rectangular callout markers affixed to the master game board; a plurality of rectangular shaped game cards numerically having identical biblical indicia on an upper formed planar playing surface comprising an equal number of adjacently aligned vertical columns and horizontal rows that embodies a matrix of adjacently aligned rectangular shaped cell spaces; a set of stationary matching pairs of unique single color cell spaces and unique two color scheme cell spaces embodying stationary biblical indicia on the planar playing surface of each game card; a unique center cell space in the center of the master game board and the game cards embodying a biblical indicia SHABACH thereon of which is marked dependently, or independently; and a plurality of detachably square cell space markers affixed to each game card having a biblical indicia SHABACH thereon the surface of each cell space marker to mark answers on the game cards.

2. A board game as defined in claim 1 wherein a matrix of adjacently aligned rectangular shaped cell spaces having distinct biblical indicia are sequentially numerated via a bible book number and chronologically designated on the playing surface of the master game board according to the chronological order of the books of the Holy Bible which are answers that correspond to callout markers.

3. A board game as defined in claim 2 wherein the master game board is affixed with detachable callout markers with distinct biblical indicia that are identical to the biblical indicia on the playing surface of the master game board.
  4. A board game defined in claim 1 wherein a plurality of game cards numerically embodies identical distinct biblical indicia randomized and designated within the matrix of cell spaces on the playing surface of each individual game card which allows for the simultaneous engagement of all participating players responding to an announced callout marker without a loss of turn during game play continually.
  5. A board game defined in claim 4 wherein a set of unique cell spaces embody stationary inseparably relative biblical indicia that are answers which are individually marked with a cell space marker corresponding to a callout marker.
  6. A board game defined in claim 5 a unique cell space having inseparably relatively biblical indicia that is parallel to a matching unique cell space that has been marked, said cell space is marked dependently in conjunction with the matching unique cell space of the pair.
  7. A board game defined in claim 6 wherein the center cell space is dependently marked, sequentially, in conjunction with a marked matching pair of unique cell spaces to validate the inseparable relativity of the biblical indicia of a matching pair of unique identical single color, or a matching pair of unique identical two color scheme cell spaces.
  8. A board game defined in claim 7 wherein a center cell space is marked independently corresponding to a dedicated callout marker embodying the biblical indicia SHABACH.
  9. A board game defined in claim 8 wherein a plurality of square cell space markers having a biblical indicia SHABACH are used by the players to mark the answers on their individual game card simultaneously corresponding, concurrently, to a callout marker announced.
